Noted 18th century critic Samuel Johnson once said, "The true genius is a mind of large general powers, accidentally determined to some particular direction." This definition of genius could aptly be applied to the new tennis prodigy Boris Becker. The incredible self-confidence, strength of mind, determination and will to succeed that Becker displayed in becoming the first-ever unseeded player to win the men's singles title at Wimbledon truly links him to the realms of genius. Such is the exacting atmosphere and tension of international sport and tennis in particular that triumph and supremacy is a matter of the supreme mind overcoming all odds.

Fascinatingly, the road to success for this muscular but athletic red-headed 17-year-old German teenager has been beset with obstacles. Till 1984, it was the ice-cool Swede, the 19-year-old Stefan Edberg, who was considered the tennis prodigy. Edberg has been the only winner of the coveted junior grand slam (French, Wimbledon, US and Australian titles in a calendar year). Becker was impressive on the junior circuit in 1984 winning tournament titles at Monte Carlo, Portland and the Young Masters at Birmingham. But his record was not as impressive as Edberg's and tennis is littered with several promising juniors who floundered as they moved up into the senior ranks (India's Ramesh Krishnan is a prime example, he never really fulfilled his potential as a junior). The genius of Becker is that in the space of a calendar year he has not only left Edberg far behind but has made that quantum jump with no apparent adjustment trauma.

Six months younger than the junior Wimbledon champion, Leonardo Lavelle of Mexico, not old enough to drive or vote or drink in pubs, Becker ploughed his way through a 128-player minefield to become the first ever German to win the Wimbledon crown. In beating Kevin Curren 6-3, 6-7, 7-6, 6-4, 'Boom Boom' Becker, as he is popularly known for his athleticism and powerful serves, became also the youngest player ever to win the King George V Cup in the 108-year-old history of the All England Lawn Tennis Championships, tennis' unofficial world championships. Becker has made tennis nay sporting history on the hallowed centre court and revered 'strawberries and cream' atmosphere of Wimbledon. Eulogistic tributes have come the world over. A London paper hailed him as Germany's 'Boy Wunder'. In the run-up to the final, a Becker fever swept the Federal Republic of Germany. The media gave extensive coverage to Wimbledon for once. Even the German TV news normally telecast at 8 p.m., was delayed on account of his semi-final match against Anders Jarryd. In Dortmund tennis fans renamed a Rote-Becker-Strasse, 'Boris-Becker-Strasse'. Bonn Head of State Richard von Weizsacker cabled congratulations to London SW19 two minutes after the final was over. Recent surveys have found that out of every five baby boys one is being christened Boris. Becker's face, hardly

familiar 10 weeks ago, is now better known to more West Germans than that of Chancellor Helmut Kohl. Tickets for the Davis Cup semi-final tie between West Germany and Czechoslovakia, to be played in Frankfurt from Oct 4-6, were sold out within 10 minutes. And within the first hour, there were 25,000 applications for seats in a 9,000-capacity stadium. Becker mania has created a boom in the tennis industry in Germany. People have gone into such a 'tizz' over Becker that even the tennis court in Frankfurt is getting special treatment. A special carpet court is being laid out for the match.

Becker has rewritten the record books. At the start of 1984 he was ranked 750 in the Association of Tennis Professionals rankings but ended the year at No. 65. He was ranked 29 before Wimbledon. It is now No. 8. What has been the motivation for this German prodigy's success? A fierce commitment coupled with characteristic Teutonic determination to be supreme. Expressing such a desire with lucid candour, Becker said, "To be successful in tennis, to be No. 1, you have to be not normal. Look at Borg or McEnroe, they are not normal. That is how I would like to be. Normal will not make you No. 1."

What does being not normal imply? A spartan existence, devoid of the normal pleasures of an adolescent. When he is not playing or practising tennis Becker is not found huddled in the players bar but in a marquee with coach Gunther Bosch engrossed in a game of chess. "I play chess because it tests my powers of concentration. I have found this helps me on a tennis court as well."

Even leisure for Becker is functional. It must help him in his odyssey to be the supreme tennis player of the world. Truly it is said that sport has a way of reflecting social or racial order or psychology. Becker is an expression of such a phenomenon. Teutonic diligence plus single-minded devotion. He is the small-town boy who achieved fame and social mobility rapidly. Becker hails from Leimen, a small town near Heidelberg in Bavaria. His father Karl Heinz is the president of the local tennis club and taught young Boris the rudiments of the game. At the age of seven, three years after he first picked up a racket, Boris won his first tournament.

Like most European boys he also played football. He was a big dangerous centre-forward and was offered schoolboy trials at the age of 12 with the club he still supports, Bayern Munich. Becker took no half measures. At the plea of his father at the tender age of 12 he had to choose a career of either tennis or football. There was no Hamlet-like procrastination in his decision. He quit football totally and devoted himself entirely to tennis. His success in the tennis world is a reflection of his genius which basically means an infinite capacity for taking pains. Becker's is the classic case of the loneliness of the successful man. "I suppose I am a bit of a loner in that I don't have many friends in the circuit. But then you have to be single-minded to get to the top." Single-minded he certainly is. In his spare time there is no withering away of energy in frenetic pursuits. Most of his spare time is spent alone, reading or listening to 'heavy rock' on his stereo and reading books on politics and light fiction in both German and English.

As a human being Becker is extraordinary

"To be No. 1 you have to be not normal. Look at Borg or McEnroe, they are not normal. That is how I would like to be. Normal will not make you No. 1."

with precocious talent and powers of concentration. How is he rated as a tennis player? His manager, the former Rumanian Davis Cup star Ion Tinac, known to be a tough taskmaster, has this to say of Becker. "I believe there is only one way to find out how good or bad a player is. You have to run them through fire. Becker did just that and reduced his opponents at Wimbledon to ashes."

Dan Maskell, the voice of tennis on the BBC television, says of Becker: "He is a remarkable athlete who has the talent as well as the courage to become one of the truly great players. Watching Becker play I am reminded of a young Lew Hoad. Like Lew Hoad, Becker also intimidates his opponents by sheer size and the force of his play. He has the same 'court presence' that Hoad had."

His game revolves on a never-say-die attitude as he scurries, scampers, stretches and dives to retrieve balls from impossible angles. With his anticipatory talent and excellent overhead shots, Becker often goes for and succeeds with shots seemingly impossible for lesser mortals. This is another facet of his game, which indicates sheer genius for as noted novelist James Joyce said, "A man of genius makes no mistakes. His errors are volitional and

are the portals of discovery."

Becker's fairy tale success at Wimbledon had a happy ending for an unexpected Englishman also. This English punter had wagered ten thousand British pounds on the young German to win even before the tournament got underway. Odds were 20 to one. Becker won the title and got 130,000 pounds as prize money but the punter was richer by 200,000 pounds. However, winning Wimbledon is like the opening of a gold mine for Becker. It is estimated that he will make one million pounds by virtue of the numerous endorsements that are now coming his way.

Like all great personalities, Boris Becker evokes contrary responses. Some call him a determined but lucky player whereas other critics rave about him. They say he is "as ferocious a fighter as Jimmy Connors; tactically better equipped than Bjorn Borg; more flamboyantly talented than John McEnroe". Time alone will decide whether Becker is destined to be one of the game's immortals or just a very good player (no average player wins Wimbledon as a teenager). One thing is certain, however, that blessed by an even temperament and exquisite stroke play Boris Becker is the man of the future.

AROUND THE TRACK IN 30 DAYS

In the idyllic setting of the Emerald Isles, India just about managed, by the skin of its teeth, to retain its reputation and stature in the one-day game. At Colombo, on Aug 25, India scored the requisite number of runs (242) just three balls short of the requisite number of overs (45) to win the one-dayer by 2 wickets.

But the news that came in from the hockey front was no good. India came fifth in the 3rd Junior World Cup held at Vancouver in Canada. The tournament was won by defending champions West Germany on Aug 27 who beat Holland 4-1. Third place went to Pakistan who beat Australia 4-2 and England took the sixth

7-4 after extra-time.

Athletics had something novel lined up this month—world championships in modern pentathlon which ended at Melbourn on Aug 21. While Attila Mizser of Hungary won the world (individual) championships, the Russians easily won the team championships.

But the tennis world witnessed a few upsets. On the clay courts of Hamburg, West Germany led by Boris Becker created a sensation when they defeated the U.S. admittedly without John McEnroe and Jimmy Connors, in the Davis Cup tie by the odd match in five.

Inspired by her male colleagues, Claudia Kohde-Kilsch of West Germany powered her way to the best win of her career yet. In the quarter-finals of the \$270,000 Player's

Challenge Tournament at Toronto, she actually defeated the great Martina Navratilova (USA) 3-6, 6-4, 6-3. Her fourth defeat of the year, this is the first time since 1982 that Martina has lost at the quarter-finals stage of any tournament. The title was won by Chris Evert Lloyd (USA) who got the better of Claudia 6-2, 6-4 in the final. Chris, in fact, went on to win the next tournament as well, when she beat Hana Mandlikova (Czech) 7-6, 6-4 at St Louis on Aug 18. With this, her tally of tournament wins reads a record 140.

The US Clay Court Championship ended on Jul 29 with victory for Ivan Lendl (Czech) who outplayed Andres Gomez (Ecuador) 6-1, 6-3 in the final to win his fifth title this year and the 43rd of his career. Earlier he got the better of Wimbledon champion Becker 5-7, 6-2, 6-2 in the semi-finals.

In the \$315,000 Grand Prix tournament at Stratton Mountain, Vermont, USA, top-seeded McEnroe (USA) routed second-seed Ivan Lendl (Czech) 7-6, 6-2 on Aug 11.

From the artificial carpet surfaces of the tennis court we move indoors to Foshan in South China where 6th World Cup T T Tournament was played. Sixteen of the best players drawn from each continent participated. The Chinese, as usual, reigned supreme. In the final on Aug 25, Chen Xin Hua beat Andrej Grubba of Poland 21-16, 21-11. In an all-Chinese, third place match, world champion Jiang Jiauang beat Chen Long Can 21-16, 22-20.

SANJEEV GUPTA

THE DURAND CUP

The Durand Cup, scheduled to commence in Delhi on Oct 1, is the second oldest football tournament in the world and the oldest in India. Only the F.A. Cup in England, which commenced in 1872, 16 years before the Durand tournament, is of an older origin. Sir Mortimer Durand started the tournament in 1888 to provide recreation to British soldiers and the Simla Secretariat personnel. He led the Secretariat team in the inaugural Durand tournament in which just six teams competed.

Since its inception, the Durand has always been played at the seat of the government. Hence, till 1939, it was played in Simla, the summer capital of the Government of British India. When the tournament recommenced after the lapse of a decade due to World War II and the traumas of partition, it has always been played in Delhi, the capital of independent India. The Durand is replete with tradition. In British India, the Viceroy gave away the prizes on the day of the final. This ritual is now performed by the President of India.

The Durand Cup was originally meant as a recreation for British soldiers and civilians in India. However, as early as 1896, there were several Indian boys in the Bishop Cotton School team from Simla, which participated in the tournament, losing 0-6 to ultimate winners, Black Watch, a British regimental team. Sandamianians from Quetta in 1931 earned the distinction of becoming the first full Indian team to beat a British side, Royal Norfolk Regiment, 1-0 in 1931.

Mohammedan Sporting club of Calcutta earned the distinction of being the first Indian team to win the Durand Cup. The historic date

SPORTSTAR OF THE MONTH

The Ashes are back in England with the latter defeating Australia 3-1 in the current Ashes-Cornhill Insurance series. The last two Test matches, played at Edgbaston, Birmingham and Oval, London went their way.

Captain David Gower of England, who emerged as the Man of the Series, staged a comeback with his three centuries in the series. His aggregate of 732 runs in this series makes him the highest English scorer against the Aussies.

spot when they lost to India 2-3.

With good training for converting field goals, our juniors could have got a better place as did the juniors (under-18) trained by Guru Hanuman—at the Asian Junior Amateur Freestyle Championships in Tokyo which ended on Aug 21. Seven of the 10 boys won medals, placing India second after Iran.

In nearby Kuala Lumpur, the defending champions South Korea retained their title at the 29th Merdeka soccer tournament on Aug 4. Tied at 4-4 with the Brazilian club America F.C. at full-time, South Korea went on to win

RECORDS OF THE MONTH

Men: 2,000 m: 4:51.39 Steve Cram (GBR) at Budapest; **1,500 m: 3:29.45** Said Aouita (Mor) at West Berlin; **high jump: 2.40 m** Rudolf Povamitsyn (URS) at Donetsk.

Women: 5,000 m: 14:48.07 Zola Budd (GBR) at London; **mile: 4:16.71** Mary Decker-Slaney (USA) at Zurich.

Men: 200 m butterfly: 1:56.65 Michael Gross (FRG) at Sofia; **4 X 100 m freestyle relay: 3:17.08** US at Tokyo; **4 X 100 m medley relay: 3:28.8** US at Tokyo.

Note: In the 100 m freestyle event Matt Biondi (USA) has clocked a time better than the existing world record four times—all of these are listed here, as they await ratification by FINA. The old record was 49.36 sec, created by Rowdy Gaines of USA.

100 m freestyle: 49.24 Biondi at Mission Viejo; **49.95** Biondi at Mission Viejo; **49.17** Biondi at Tokyo; **49.14** Biondi at Kobe.

was Dec 12, 1940 and Calcutta's famed black and white-shirted Mohammedan Sporting won 2-1 against the Warwickshire regiment.

The winners of the Durand tournament get three running trophies—the Durand Cup, the Simla Trophy (a silver football held aloft by three players on a silver base donated by the citizens in 1905 to prevent the tournament from being shifted to Quetta or Lahore), and the President's Trophy, donated by the Head of State.

Only three teams, in the near 100-year history of the Durand Cup have won the tournament outright for three successive years. They are two British regimental teams, the Highland Light Infantry, 1893 to 1895; Black Watch, 1897 to 1899; and Calcutta's Mohun Bagan, 1963 to 1965. When Mohun Bagan became the first Indian team to win the Durand tournament three years in a row, Gen J.N. Chowdhury, then President of the Durand Society, in recognition of their achievement, presented them his personal sword and a replica of the trophy at a glittering ceremony at the Ashok Hotel. Mohun Bagan have the best record in this tournament, having won it on 12 occasions and being runners-up six times. They also current holders of the trophy. N.K.

DULEEP TROPHY

The Duleep Trophy is of one of the three premier cricket tournaments in India. The other two being **Ranji Trophy** and **Irani Trophy**. The Ranji Trophy is named after the great Maharaja Ranjitsinhji who played Test cricket for England. The Duleep Trophy is named after Ranji's nephew Duleepsinhji who emulated his uncle by representing England in Test cricket. This was well before India gained the status of a Test playing country.

The Duleep Trophy was introduced on the domestic circuit in 1961-62, two years after the introduction of the **Irani Cup**. Before the Duleep Trophy, a player's form in the Ranji Trophy and Irani Cup used to be the basis for the selection of the national squads. But the introduction of Duleep Trophy added a new dimension to the task of team selection.

This trophy is played on a zonal basis, the five zones being north, east, west, south and central. Players are selected for the zonal teams after their performance in the Ranji Trophy. In fact, the Duleep Trophy match provides stiffer competition than any Ranji tie or for that matter an Irani Cup match. The cream of talent in each zone comprises the zonal squad which often motivates the cricketers to give their best.

The Duleep Trophy is played on a knock-out basis. The top three teams of the previous year play from the semi-final stage onwards while two teams fight it out for a semi-final berth. The matches are of four days duration but from this year the Board of Control for Cricket in India (BCCI) has increased the duration to five days.

As for the statistics, West Zone have won the Duleep Trophy the maximum number of times—11 including the first four years during which they once shared it with South Zone in 1963-64. South Zone have won the trophy eight times while North Zone have won it on five occasions. Central Zone won it once in 1971-72 while East Zone are yet to win it.

The present holders of the trophy are South Zone. VJAY LOKAPALLY

THE INDIAN MASTERS

With Geet Sethi's triumph, three Indians have won the Arthur Walker Trophy. The first one was Wilson Jones in 1958 at Calcutta when he beat L. Driffield in the final. He lost in 1962 to Marshall but won again in 1964 in New Zealand beating Driffield again.

Michael Ferreira first won the trophy in 1977 at Malta when he beat Bob Close in the final. He repeated his wins in 1979 at New Delhi beating Norman Dagley and then in 1983 at Malta defeating his countryman Subhash Agrawal.

Then followed Geet Sethi's victory on debut this year in the world championships. This itself being a record apart from the fact that he is the youngest ever to wrest this crown.

V. SWAMINATHAN

THE US OPEN

The US Open tennis championship at Flushing Meadow, New York, is one of the richest tennis tournaments in the world. The prize money is worth \$1,489,000. It is one of the four prestigious or grand slam tournaments held annually. The other three being the French Open at Paris, Wimbledon and the Australian Open.

Like Wimbledon, the US Open is also steeped in history and tradition. It commenced way back in 1881 and has been held continuously since then without even a break during the two World Wars. Unlike Wimbledon, however, which has always been held on lush green grass courts, the US Open has been staged on three different surfaces—on grass courts at Forest Hills till 1974; on clay courts at the same venue from 1975 to 1977; and on special artificial hard courts since 1978 at a new venue—Flushing Meadow. Known as Deco Turf II, this court combines the best aspects of both the grass court and the clay court. There are no bad bounces, the effect of the weather is not crippling, it favours the big server and the good stroke-maker. Tournament director Bill Talbert calls it the "truest test of tennis". The surface is, however, both different and difficult compared to grass or clay courts. The DecoTurf II is consistent in bounce but in late summer the asphalt hugs the heat and pushes the temperature by as much as 15 degrees. To win the Open amidst all the heat and passion of the Flushing Meadow Park in New York City, one has to be a complete player.

Jimmy Connors, who has won five US Open titles, is the only player to have won on all the three surfaces (1974, 1976, 1978, 1982 and 1983). In the last 11 years Connors and John McEnroe (both Americans) have won the men's singles title on nine occasions, the other two going to left-handed clay court specialists Manolo Orantes and Guillermo Vilas. There has been a jinx on right handers playing for the US Open men's singles title. The last one to win it was Australia's John Newcombe way back in 1973.

Except for Tracy Austin (US) winning the title in 1979 and 1981, the women's singles in the recent past has been dominated by Chris Evert Lloyd (six times winner—1975-78, 1980 and 1982) and Martina Navratilova (winner in

1983 and 1984).

Each famous tennis tournament has its distinctive qualities. If Wimbledon has tradition, the US Open is a tough event to win. A player's game is often thrown out of gear by factors not related to tennis—the noise created by the 727s landing or taking off at the nearby La Guardia airport, trains screeching into the subway station, police helicopters swirling and swooping looking for hoodlums. Even the great Bjorn Borg succumbed to such pressures. He returned empty handed from four finals (1976, '78, '80 and '81). Above all, the US Open is very lucrative for the successful players or the prodigies. To do well at the US Open at the Louis Armstrong stadium is a ticket to lucrative deals in American clothes, shoes and other endorsements. N.K.

THE SUBROTO CUP

The Subroto Mukerjee Cup football tournament, held annually in Delhi, invariably alongside the prestigious Durand Cup, has in a short span of two decades, become a landmark in the country for organised sport at the school level. The tournament was started in 1960 with the cup having been donated by the Durand Society in memory of the late Air Marshal Subroto Mukerjee, whose contribution to Indian football and the Durand Society was noteworthy. However, within a year, there was spectacular increase in the popularity of the tournament, and school teams from numerous states participated.

The sports wing of every education department in each state and Union territory annually organises an inter-school football tournament in their area with the winners from each state qualifying for the Subroto Cup proper at Delhi. Only the holders are allowed automatic entry and so another team from the same state is also permitted to play. By the method thus evolved, over 7,000 schools compete in the qualifying rounds and nearly 80,000 schoolboys below 17 years figure in the competition indirectly.

To give a further boost to budding football talent in the country, the Subroto Mukerjee Cup authorities since 1972 have been awarding 14 to 16 annual scholarships to players with potential on the basis of their performance in the actual tournament in Delhi. Laudable though this scheme is, it has not produced the desired results as most of the junior talent just fades off the scene. This is because there is very little organised senior football in these areas. As there is no follow-up action, many talented players just cease playing in the prime of their career. Unfortunately, this lack of follow-up action by the AIFF and the state authorities has defeated the very purpose of the Subroto Cup. So far players from West Bengal have won 23 scholarships—the maximum by any state in the country.

Unfortunately, unlike the Nehru Hockey tournament society, which annually holds a summer coaching camp for the promising players of the junior Nehru tournament (for school teams) the Durand Society because of financial liabilities is unable to do so. It is imperative that the AIFF with help from private sponsors, initiate the task of conducting an annual coaching camp and other follow-up action for schoolboy footballers. N.K.

STAR WARS

The world is being rocked by the fear of a possible nuclear holocaust. And the controversial US Star Wars programme—a four-stage layered, defence system capable of destroying enemy nuclear warheads in space—has been the epi-centre of this quake. A stage-by-stage study of this fresh arena in war technology.

THE NUCLEAR NIGHTMARE

The name Star Wars evokes differing responses in people depending upon their knowledge and perceptions. Some presume that they are adventurous battles to be fought in distant galaxies by gallant and noble space-men whereas others view them as harmless exercises being conducted by the superpowers to face unknown nuclear challenges.

Stars Wars are closely connected with the term Strategic Defence Initiative (SDI) coined by US President Ronald Reagan. This term signifies US programmes to develop a space shield against hostile nuclear weapons. The Western research programmes for SDI are being developed simultaneously by the American and European industries.

While the American Pentagon is interested in having a single programme incorporating the European industry to develop the Star Wars technology, the French have proposed a European plan of their own—Eureka—aimed at pooling the European sources to prevent Europe from becoming a mere satellite of American and Japanese high tech industries. Initially, the Soviet Union did not accept the American concept of research for space weapons but lately they have veered round to accepting research but are against development and testing of space-based nuclear weapons. The space shuttle Discovery, launched by the US in June this year, carried out space tests in laser technology for the controversial Star Wars anti-missile defence programme.

Evidently, the SDI will not add to security but will take the arms race into outer space thus obstructing the arms limitation talks. The militarisation of outer space would fling open new frontiers of global destruction. Unfortunately, the imperatives of halting the danger of nuclear conflagration are being negated by

President Reagan's insistence on developing these 'defensive' weapons. According to the US, the race for Star Wars is held on and off and if they do not develop such weapons, the Soviet Union may do so. Despite differences with NATO allies, the US has continued to develop space war technology.

This \$26b. five-year research programme is seen by some NATO allies as a hedge against Soviet efforts to develop space-based defensive arms. These weapons would counter the Soviet SS-18 missiles which have a range of 7,000 miles and carry 10 nuclear war heads. For the defence of Western Europe, it is proposed to utilise space-based technology to counter the Soviet SS-20s which have a range of 3,000 miles.

Effect On Third World

Superpower strategies in respect of the Third World are concentrated in the Indian Ocean region. The aim of these strategies is to control the global economic order to serve their respective interests. The US thrust in the sphere of Star Wars strategy is on anti-satellite (ASAT) measures in the Southern Hemisphere. These measures use interceptor satellites which make more than one orbit before interception with American F-14 and F-15 fighter aircrafts which fire ASAT missiles at a range of 900 km within the Southern Hemisphere. Soviet satellites have lower and elliptical orbits with perigees over the Southern Hemisphere. The destruction of the Soviet satellites that provide command control, communication and intelligence functions to military commanders, will impair the Soviet ability to conduct a nuclear war.

As the Indian Ocean occupies one-third of the Southern Hemisphere—an area most vulnerable to Soviet satellites—India and other littoral countries cannot remain unaffected in the case of a nuclear Star war. A 12,000-ft long airfield at Diego

Garcia in the Indian Ocean and the aid of Australia, and south Africa are available to the US. However, the Soviet Union too has limited facilities and naval presence in the Indian Ocean.

First Nuclear War

The US tested a secret weapon in the New Mexico desert on Jul 16, 1946, which resulted in the destruction of all life within a one-mile radius. As a cover plan, this explosion was explained as the blowing up of a huge ammunition dump. Three weeks later on Aug 6, the first nuclear war commenced when an American B29 Bomber dropped 'Little Boy' on the Japanese city of Hiroshima. This atomic fission bomb was equivalent to 20 kilotons (20,000 tons) of TNT and was called a 'nominal bomb.' Three days later another nominal atomic bomb 'Fat Boy' was dropped on the second Japanese city of Nagasaki. The dropping of this atomic bomb resulted in a nuclear holocaust that destroyed the Japanese military-industrial complex, killed lakhs, injured more and scarred coming generations with dreadful diseases. The atomic bombs resulted in Japanese surrender, bringing the six-year-old war to a close.

The US objectives in adding a nuclear dimension to the war were several: to defeat Japan militarily, impose a US democratic and economic pattern on Japan, prevent British, French and Dutch colonialism, prevent the spread of communism (as the USSR was to open their Asian front in mid-August) and lastly to prevent the emergence of USSR as an arbitrator.

The study of the first nuclear war is essential to understand that no nuclear guarantee or umbrella proposed by the superpowers can be depended upon especially by the Asian and underdeveloped nations.

The Alternative

The only alternative to nuclear holocaust and Star Wars is a ban on nuclear testing. To mark the 40th anniversary of the bombing of Hiroshima and Nagasaki, the Soviet president Mikhail

Gorbachov announced in late July 1985, a five-month-long unilateral moratorium on nuclear testing. When the US merely responded with an invitation to witness American nuclear tests, USSR again offered to extend the nuclear testing moratorium beyond a five-month period to as long as the US refrained from nuclear testing. Ultimately the US has agreed to join the moratorium after completing the present nuclear testing programme.

About 1,507 nuclear tests have been conducted since the first test in July 1945 (US-756, USSR-556, France-127, UK-38, China-29, India's peaceful nuclear explosion at Pokhran in 1974-1). The aim of nuclear tests is to design and develop nuclear weapons, increase confidence in the weapons stockpile and judge the impact of nuclear weapons on military systems.

Test Ban

The history of nuclear ban makes a fascinating study. The period 1958-61 saw a moratorium on atmospheric nuclear explosion (these cause heavy radiation hazards). After the Cuban missile crisis in 1962, a partial test ban covering air, underwater and outer-space nuclear testing was signed between the two superpowers. These bans did not apply to France and China—France continued the banned tests till 1975 and China till 1980. In 1974 the Threshold Test Ban Treaty restricting nuclear tests to no more than 150 kilotons was signed and in 1976 the above restriction was extended to peaceful nuclear explosions. Unfortunately, President Reagan abandoned all test ban negotiations.

The major hurdle in negotiating a test ban treaty has been the extensive lobbying by three nuclear weapon laboratories at Los Alamos, Lawrence Livermore and Sandia. The US scientists feel that a revolutionary change in nuclear weapon technology is round the corner and their country must remain in the lead. While the first nuclear weapons were of the fission type, the bulk of world's nuclear arsenal today is of the fusion variety. The current testing is designed to produce the third generation nuclear weapons for specific effects. In the new generation weapons a fraction of energy from a nuclear weapon is focussed into one or more narrow beams or a specific target.

Treaties

Article V of the peaceful Nuclear Explosion Treaty signed between the US and USSR in 1976, recognises the need for peaceful nuclear explosions and calls for research aimed at its applications to civil engineering, earth moving, creating underground reservoirs and stimulation of oil and gas production. India is working to develop technical know-how for peaceful

application.

The Nuclear Non-Proliferation Treaty (NPT) sponsored in 1968 by the US, USSR and UK is heavily weighted against non-nuclear states, while there has been no progress in nuclear disarmament with the number of war-heads rising from 4,500 with 2,300 megatons in 1968 to 13,330 with 9,200 megatons in 1985. Seventeen years after the signing of the treaty, no nuclear state has emerged but an ambiguity has arisen about the status of Israel, South Africa and Pakistan. Another potent danger is of transference of tactical or strategic nuclear weapons to allies.

India continues to be opposed to the NPT while Pakistan has been pressing for India to join this unequal treaty to provide legitimacy to the arsenals of the five nuclear weapon powers (USSR, USA, UK, France and China) and accept nuclear hegemony of China in South Asia in general and the Indian sub-continent in particular. Its offer of mutual inspection of the nuclear facilities is unacceptable to

India and its clandestine method of acquiring nuclear weapons has shaken this country's confidence. Pakistan has imported natural uranium from Niger through Libya and procured 6,200 centrifuges from the Netherlands for the enrichment facility at Kahuta. It has also surreptitiously tested the US-made Krytron electronic switches in a non-nuclear explosion. China is also reported to have revealed in 1983 the details of its fourth bomb test.

Dismal Future

While we consider the nuclear threat from our neighbours, let us not forget the Star Wars that might engulf Asia when the region of Indian Ocean becomes an arena of anti-satellite missiles destroying Soviet satellites or other missiles. The first nuclear war of 1945 gave us a reprieve of four decades, the next one may perhaps be the last. Will the voice of sanity raised by our PM Rajiv Gandhi, the non-aligned world and the crusaders for peace the world over, be heard and the reprieve extended?

U.N. KUMRIA

ANATOMY OF STAR WARS

The US Strategic Defence Initiative (SDI), commonly known as the Star Wars system, is basically a plan for a defensive system capable of destroying enemy nuclear warheads in space before they reach their target. Proponents of SDI have identified four stages during the flight of an intercontinental ballistic missile when the missile could be attacked. The overall plan envisages a 'layered defense system' involving all the four stages.

Immediately after launch, the missile carrying rocket gains rapidly, covering about 100 km in just four minutes. At this stage, called the boost stage, the missile is most vulnerable because it can be easily spotted by infrared sensors due to its huge, hot exhaust plume. Another advantage of attacking at this stage is that several warheads can be destroyed in one hit because each missile carries up to ten warheads. But despite all these advantages, the boost stage is the most difficult for an attack. For not only would the missile have to be spotted quickly, within four minutes, the weapon would also have to be effective from a long distance.

In the second stage, called the post-boost or deployment stage, the missile climbs up to an altitude of about 650 km after which its 'nose cone' is cast off. At this stage a device, known as a 'bus', detaches itself and manoeuvres for another five minutes or so, releasing up to 10 warheads and 100 decoys. As a result, during this stage of the missile's flight the number of 'targets' multiplies rapidly. Tracking all of them and identifying the

real ones would be a problem because of the extremely short time (about five minutes) available.

Next comes the mid-course stage, lasting about 20 minutes, during which all the warheads and decoys follow predictable paths that may take them as high as 1,000 km into space. The main problem here would be of distinguishing between real warheads and decoys which would appear much alike both to infrared sensors and to a radar. A typical group may comprise about 8,000 warheads hidden among as many as 1,00,000 decoys. To distinguish between them at this stage would require huge computer capacity and highly complex programming. Even then the identification may not be absolutely foolproof. So, although the time available is plenty, the mid-course stage is not ideal for countering a missile attack.

The final stage before a missile hits its target is the re-entry stage during which the decoys, being much lighter, burn up rapidly and only the real warheads penetrate the atmosphere. So the number of targets to be tackled falls sharply. But, again, the time available for a counter attack at this stage is extremely short—a mere 30 to 100 seconds—during which the warhead has to be spotted, aimed at and hit. For better reliability the proposed Star Wars system envisages a layered defence system that would attack the warheads throughout their flight, destroying more at each stage. Simple

IN THE NEWS

ECUADOR

The South American Republic which lies astride the equator and has a name which sounds very much like the equator—Ecuador—was in the news recently because a group of

Ecuadorians, without the sanction of the government, visited a group of Sikh extremists in England and expressed sympathy with the extremists' demands. The Ecuadorian delegation was unofficial but even if it had been official, it would hardly have mattered in real terms because Ecuador is too small and weak to pressurise a country of India's size and stature. Ecuador is only 1,09,484 sq km in area and has a population of only about 7m people. About 50% of the people are native Indians, 25% are mestizos (mixed Indian and whites), 15% are blacks and only 10% are white.

Spanish is the official language but Quechua is still spoken by a segment of the Indians. Most of the people are Roman

Catholics but no official recognition is granted to it nor does the state give it any financial support.

Within the past decade, Ecuador has changed from a country relying on an agrarian economy to an oil rich industrialised nation. It is a member of the Organisation of Petroleum Exporting Countries (OPEC). Yet, the nation's output of oil is relatively small and it may have to resort to petroleum import in the late 1980s.

From the historical point of view, however, Ecuador's civilisation goes back a long time. Its history has recently been re-written after the discovery of pre-Incaic archaeological art in the Littoral, Sierra and the Oriente regions. Intensive farming, permanent villages and ceramics date back over 5,000 years in the Guayas Basin of coastal Ecuador. Thousands of years later in the 15th century, Ecuador became part of the Inca Empire. In the early 16th century, the Spaniards took over the Incaic bureaucracy and assumed tenuous control.

In 1822, Ecuador joined the Confederation of Gran Colombia (with Colombia and Venezuela) and became an independent nation seven years later. At first, its political tendencies were conservative Catholic. But soon there was the growth of a strong liberal tendency and in the late 19th century, there was a civil war and the political pendulum swung towards

the left. Thereafter, capital was pumped in from North America, Britain and France, and there was a rightist swing in the early 20th century. There was another civil war around 1912. Political instability continued between 1925 and 1948 and no president was able to complete his term in office. In fact, Gelo Plaza Lasso, who was elected President in a free election in 1948, was the first President since 1924 to complete his constitutional four-year term.

In the 1950s there was a trend towards peaceful government, but in 1963 a four-member military junta again took over the control after a period of dissatisfaction and ruled till 1966. The armed forces again assumed control in 1972 after a coup and ruled till the late 1970s. At present, there is a civilian government in Ecuador.

Effective power rests with the large estate owners. There has been political instability in the land since independence, and despite its memberships in a number of international organisations including the UN, the Organisation of American States (OAS), the South Pacific Commission and the Group of 77, Ecuador does not wield much influence in world politics. Economically it had had some clout for some time in the 1970s because of its oil revenues, but even that is now on the decline with a fall in its oil production. And politically its word does not carry weight.

S.B. & I.S.

arithmetic shows that, if enemy missiles had to pass through four separate layers of defense (one designed for each stage) and each one was only 90% effective, only one out of 10,000 warheads would get through.

Weapon Systems

Three satellite-based weapon systems are being considered for the Star Wars programmes namely lasers, particle beams and kinetic energy weapons. Lasers are well-known devices capable of generating extremely high-powered, concentrated beams of light, almost perfectly parallel and of a single wavelength. The 'killing' power of laser beams comes from the enormous amount of energy that can be crammed into them, and the ease with which they can be focussed over thousands of kilometres. When focussed on a target, a high-energy laser beam could decapitate an approaching missile by burning a hole into it, destroying its guidance mechanism and deactivating its warhead. However, to be effective, the power of the beams will have to be at least 25Mw which is several million times the output of the most powerful chemical lasers built today.

Two strategies are being developed for

deployment of chemical laser weapons. One of them envisages ground-based generation of high-energy laser beams which would be reflected by satellite-borne relay mirrors to the targets. The other plan is to produce the beams on board low orbit satellites and aim them at the targets by special reflectors. Another concept being considered is the use of extremely energetic X-ray lasers fuelled by small nuclear explosions. Although such a system will have high destructive capability, several thousand of them would be needed in space because each X-ray laser can be used only once as it is destroyed by the nuclear blast that produces the X-rays.

The basic principle behind a particle beam weapon is the fact that charged sub-atomic particles such as electrons and protons can be accelerated to extremely high speeds—almost 99% the speed of light. At such speeds the particles emerge from the accelerator as a tight beam which can be focussed on a distant target to destroy it. But there are two snags. Firstly, particle accelerators are massive systems weighing several hundred tonnes which will have to be lifted into orbit. Secondly, the accelerated beams, being made up of

charged particles, would be easily distorted by the earth's magnetic field which would put them off target. There is a proposal to 'neutralise' the beam before it leaves the accelerator to avoid the problem, but that would reduce the power of the beam substantially.

Kinetic-energy weapons are nothing but simple objects like rockets, rocket debris or even pellets of metal fired at a missile to knock it off by sheer impact. Potentially these weapons would be effective at any stage from boost to re-entry, and can be fired either from ground or from space. But the problem is their limited range, of only hundreds rather than thousands of kilometres.

Although the scientific principles behind all the systems proposed for the Star Wars programme are well-known, the feasibility of actually setting up such a multicomponent system is still unknown. Many of the weapon systems envisaged in the plan would involve scaling up of existing systems several thousand fold. Even if such a system actually comes into being, it is quite possible that by then the other side will have come up with weapons that can get the better of it.

BIMAN BASU

Extensive information of various topics is an absolute necessity. At every stage of a competitive exam. From the written test to the group discussion to the interview. Our essays are designed to provide you with comprehensive details on wide-ranging topics.

POVERTY ELIMINATION PROGRAMMES

With the introduction of planned economic development in 1951 it was expected that the benefits of growth will automatically percolate down to the weaker sections of society. However, in reality the number of people below the poverty line continued to increase. This compelled the planners to change their strategy. Specific programmes like the Small Farmers Development Agency (SFDA) and the Marginal Farmers and Agricultural Labourers Development Agency (MFALDA) were undertaken in right earnest in the late 60's. Unfortunately these programmes were restricted to a few pockets in the country. More ambitious programmes like the Integrated Rural Development Programme (IRDP) and the National Rural Employment Programme (NREP) were launched by the government in the '70s to make available to the poor a decent standard of living.

It was in 1972 that the Maharashtra Government, started the Employment Guarantee Schemes (EGS) with a view to alleviating the misery of the poor. The aim was to provide gainful employment to all the unemployed, unskilled workers in the state. However, these noble intentions could not be translated into reality as the wages offered were too low to attract the workers. Even community assets did not come up due to ad-hocism in decision making and lack of proper planning. Similar schemes were taken up by other states also but the inherent loopholes rendered them largely ineffective.

In 1977 the Centre started the Food For Work programme (FFW) to provide employment opportunities to the rural poor, particularly during the slack employment period, and, at the same time, create durable assets. The wage component under the programme had two parts, viz, cash and foodgrains—the latter to ease the pressure on the public distribution system. But, there were shortcomings in the implementation of this programme and, therefore, in 1980, it was revamped, res-

structured and rechristened as the National Rural Employment Programme (NREP), with the aim of generating additional employment of 300-400m mandays per year for the rural unemployed and the underemployed.

The payment of wages in terms of foodgrains was restricted to 1 kg per head, per day and the balance wages were paid in cash. The programme also sought to build up the rural infrastructure to give a fillip to the growth process in rural areas. Started on a 50:50 sharing basis between the Centre and the states, the NREP achieved its moderate targets in 1981. But, success can only be termed as partial because a large amount of funds and foodgrains go unutilised by the states, revealing the weaknesses in the implementation of the programme. Lack of a proper planning and monitoring agency, along with delays and large-scale bunglings, have hampered this programme.

Realising the limitations of the various schemes, a wider and more comprehensive Integrated Rural Development Programme (IRDP) was taken up in 1978-79 and extended to all the 5,011 blocks in the country. Its objective was to raise the families in the target group above the poverty level and create substantial employment opportunities in the rural areas. The poorest of the poor families were identified and provided assistance covering the essential services. The enumerated activities for the small and marginal farmers, agricultural and non-agricultural labourers, rural artisans and the SC/STs were to be financed partly by bank loans and partly by subsidy. This programme is again shared by the Centre and the states on a 50:50 basis. Though the government is trying hard to make IRDP a success, faulty implementation is a major stumbling block. However, in the Seventh Plan, with the organisation of the beneficiaries into clusters or groups, a new thrust is being envisaged for improving the programme.

To remove the problem of unemployment among the rural youth the national scheme of Training for Rural Youth for Self Employment (TRYSEM) was initiated. The aim was to encourage the rural youth to take up self-employment. The scheme gives a special place for women and SC/STs. But the lack of a comprehensive approach has prevented the fulfilment of its objectives.

The landless poor in the countryside have not been ignored by the planners. To

improve their plight, the Rural Landless Employment Guarantee Programme (RLEGP) was announced in 1983 with a view to improve and expand employment opportunities for the rural landless, provide employment guarantees to at least one member of every landless labourer's household, upto 100 days in a year, and create durable assets for building up a viable rural infrastructure. Under the Sixth Plan Rs 600 crores were allocated and during 1983-84 Rs 100 crores were released to various state governments and Union territories for the implementation of the programme. However, the Centrally sponsored scheme is still in its infancy and a proper evaluation can be made only after a few years.

All the above-mentioned anti-poverty programmes, though well designed, have failed in their implementation stages. Proper identification of beneficiaries and project mix alongwith appropriate monitoring agencies and trained man power can certainly make these programmes more effective. The backward and forward linkages associated with any activity have to be recognised at the time of financing the projects under these programmes. Poverty can be banished but strong political will is required to take harsh decisions. Can we expect bold decisions in this regard from the government? Only time will tell.

J.V. ARUN KUMAR

INDIA'S ACHIEVEMENTS IN SCIENCE AND TECHNOLOGY

When India attained freedom in 1947, it did not have any worthwhile infrastructure for the development of science and technology nor did it have a sound industrial base. Agricultural production was abysmally low and health-care services were non-existent. Yet less than four decades later it has emerged as a major technological power which can design, build and run its own nuclear power plants, build and launch its own satellites and ranks tenth among the industrialised countries of the world. Today India not only produces all the foodgrains it needs for domestic consumption, it also exports them. With improved health-care services, the life expectancy of the average India 3 years more today than what it was three decades ago. Death rate has come down from 47 to

15 per thousand.

After independence, the main thrust of agricultural research was to achieve self-sufficiency in foodgrains. Several measures were initiated by the government to achieve this goal. The Indian Council of Agricultural Research was reorganised into an autonomous, apex agency to promote agricultural research and education in the country. Agricultural universities were set up in each state—today there are 23 of them. Advanced centres of postgraduate education and research were also set up to promote advanced research in plant genetics and plant breeding. Another important step was launching of the All India Coordinated Research Projects to utilise human and material resources available within the country.

On another level, large strides have been made in providing agricultural inputs such as fertilisers and water for irrigation. Large fertiliser complexes were set up, and today India is the fourth largest producer and consumer of nitrogenous fertilisers in the world. Rapid expansion of irrigation facilities in the last three decades has brought more than 2,300m hectares under irrigation, which is the second largest area under irrigation in the world. The third significant input has been the introduction of high yielding varieties of crops including wheat, rice, maize, and sorghum. All this has led to substantial increase in agricultural production. The total foodgrains production during 1983-84 was more than 140m tonnes as against 50m tonnes in 1950-51.

In the field of medicine, major research efforts have been promoted through the Indian Council of Medical Research. The main thrust of the research programmes has been, to improve the national health by eradication and control of communicable diseases, fertility control, promotion of maternal and child health and developing alternative strategies for health care delivery systems through the primary health care approach. Two of the most significant achievements since independence have been the eradication of small-pox and plague. Cholera, which often broke out in epidemic form in the past, is now totally under control. National programmes have been launched against TB and leprosy which have shown encouraging results. In the field of population control, signs of success were evident in the 1981 census figures which showed for the first time a levelling off of the 10-year growth rate. The annual growth rate at pre-

sent is estimated at 2.3%. Newer methods of contraception are under development.

India is one of the first countries in the world to go in for nuclear power. India's first nuclear power plant was commissioned in 1963 at Tarapore. Since then two more atomic plants have come up at Kota in Rajasthan and Kalpakkam in Tamil Nadu. Two more plants are under construction at Narora in UP and Kakrapar. The present target of nuclear power generation is 10,000 Mw by 2000 A.D. The significant feature of India's nuclear power programme is the gradual indigenisation of the plants. The Tarapore plant was totally imported; the Narora plant will have less than 3% imported components. India has also built up the infrastructure for a sustained nuclear power programme. It has its own uranium mining and processing facilities, fuel fabrication facilities, heavy water production plants and spent-fuel reprocessing facilities, which make it almost totally self-reliant in the vital high technology area. Besides power generation, India's nuclear research programmes include use of radio isotopes in agriculture, medicine and industry. India today has facilities for producing its own radio isotopes in its research reactors.

India today produces a wide range of electronic goods and equipment such as radars, broadcasting equipment, television sets, telecommunication switching and transmission equipment, satellite earth stations and nuclear reactor control equipment. Except for a few specialised items, most of the materials and components for these products are produced within the country. Over the past few years, the indigenous computer industry has shown considerable growth. The country today manufactures a number of mini-computers and microprocessor-based systems which were earlier imported. The Department of Electronics has successfully promoted computerisation through a number of its regional centres. At present computers are being used for a wide variety of applications including railway and airline bookings, medical diagnostics, banking, photocomposing and printing industry and in several manufacturing industries. Recently, India has started manufacturing its own 'chips' for the computer industry at the semi-conductor complex near Chandigarh.

One of the most spectacular successes of Indian science and technology has been in space research. Today, India is the only Third World country which has the capability to design, build and launch its own satellite using its own rocket. The activities of India's space programme are spread over four major centres of the Indian Space Research Organisation (ISRO) which has its headquarters in

Bangalore. The largest of the ISRO centres is the Vikram Sarabhai Space Centre in Trivandrum, which is primarily concerned with the development of launch vehicles. It is here that India's first satellite launcher SLV-3 was designed and built. The centre is now working on a modified version of the rocket, called Augmented SLV-3 which is to put a 150-kg satellite in orbit sometime next year. The SLV3 rockets have so far put three 40-kg Rohini satellites into near-earth orbit. The ISRO Satellite Centre at Bangalore is responsible for developing satellite technology and implementation of satellite systems for various scientific, technological and applications missions. The centre has so far built seven satellites including the Aryabhata, two Bhaskaras, three Rohini satellites, and the APPLE which is the heaviest and most sophisticated satellite built by Indian scientists. The SHAR Centre at Sriharikota in Andhra Pradesh is the place where the largest rocket-launching facility of ISRO is located. It is equipped with all the latest ranging and monitoring facilities of a modern launch complex. The fourth major ISRO centre is the Space Application Centre at Ahmedabad which is primarily responsible for developing programmes for satellite application.

The commissioning of INSAT-1B in October 1983 was a triumph for India's space programme. Although the satellite was built by an American firm, its design was entirely Indian. It was the ISRO scientists who thought of combining the three functions of telecommunication, television and meteorology in a single satellite to cut the cost. Today, INSAT-1B is the only satellite in the world with multi-purpose capability.

B.B.

SHIFTING CULTIVATION

Stark faces of hills that were green once but are bereft now. remorselessly creeping wastelands taking vast expanses of land into their sweep. Deserts where there were forests, waste where there was wealth. Images poignant and painful, but very real, stare out of the hilly areas of north-eastern India, Andhra Pradesh, Bihar, MP and Orissa. These tracts have been abandoned by farmers who once cultivated them for food. The farmers have shifted to greener pastures where they will repeat the process—the process of shifting cultivation or jhumming. It involves razing forests to stumps of trees and leaving them to dry up. The last remains of the forests are then burnt and the cleared land farmed upon. The day the land loses its fertility and stops yielding crops the farmer

INDIA'S NUCLEAR OPTION

BY SRIDHAR RAMAN

Pakistan is on its way to making a nuclear bomb. Posing a grave threat to India's security. And prompting it to revise its defence strategy. The question which looms large is: Should India go nuclear? M. Zuberi of Jawaharlal Nehru University and K. Subrahmaniam, Director, Institute for Defence Studies and Analyses, feel it should. Their reasons.

There has been, since the year 1968 when the Nuclear Non-Proliferation Treaty (NPT) was signed, a continuing "qualitative and quantitative" proliferation of nuclear weapons by the USA, the USSR and the UK—the three sponsors of the NPT. No new nation has become a nuclear power since then. However, the status of Pakistan, South Africa and Israel is somewhat hazy. India would not have been concerned were there no reports that Pakistan was on its way, rapidly in fact, to make the nuclear bomb. Should Pakistan be successful, against whom would it be used? "Against India, of course," as there is no other nation in the vicinity or anywhere else on the globe on which Pakistan can think of dropping it. Therefore, a sizeable section of Indian public opinion has started demanding that India should also produce nuclear weapons.

The situation is reminiscent of 1974 when India detonated her maiden nuclear device. Then Pakistan was overcome by a similar tide of public opinion. And Bhutto's outburst: "We will eat grass and leaves but make the bomb" epitomised the violence of such reactions. Now the scene has shifted from Pokhran in Rajasthan to Kahuta near Karachi and from Pindi to Delhi. PM Rajiv Gandhi and the Foreign Minister, Khursheed Alam Khan, have made it amply clear, though in a subtle way that India will make the bomb should Pakistan make one. Khan told the Lok Sabha: "If Pakistan makes a nuclear bomb, the security environment will be affected and we will have to respond suitably." The Defence Minister, Narasimha Rao, had earlier remarked: "It was time for us to elicit the opinion of the Parliament on the question of whether India should go nuclear." And the PM had said: "We have not made any decision but we are thinking about it."

To get an expert opinion on the issue, we talked to M. Zuberi of the Jawaharlal Nehru University, and K.

Subrahmaniam, Director, Institute for Defence Studies and Analyses.

Zuberi thinks it is necessary, to analyse India's security environment before any discussion on the possibility of India opting for a bomb. Despite China's awesome military might and the fact that it continues to occupy a large chunk of Indian territory, Pakistan and not China is our major adversary. In less than four decades we have had to face three major attacks by Pakistan and the obvious reasons for those attacks are "still obsessively alive in the Pakistani psyche". It uses every opportunity to raise a dead issue like Kashmir at international forums. Stockpiling of arms continues.

We are aware of the Sino-Pak tie-up. In the '65 and '71 wars, China uttered thinly veiled threats to intervene on Pakistan's behalf. The Sino-Pak axis remains as active today as it was during those wars. It is also feared that China has been aiding Pakistan in its nuclear weapons programme, besides helping the development of its conventional army and armaments. The construction of the Karakoram Highway, partly on India's territory occupied by the two countries, is further proof of the growing Sino-Pak military collusion. The sporadic clashes in the Sichen area point to the explosive nature of our security environment.

The sharply increased American military aid to Pakistan is causing concern to India. It is common knowledge that Pakistan is the kingpin in the American designs "to tilt the military balance in this region to the West's favour". The US, though it may not have actually abetted Pakistan's nuclear weapons programme, has done nothing to discourage it. The improving Sino-American relations also benefit Pakistan. The nuclear cooperation pact signed between them and the unprecedented US visit of the Chinese Premier, further strengthen India's fear that certain powers are colluding against it. The pact does not put an embargo on China transferring the nuclear know-how it will get from the US. It can, therefore, be easily traded with Pakistan.

Within the country, the insurgency problem in the north-east has not come to an end. The long standing agitations in Punjab and Assam seem to have been settled for the time being. The internal security in the country may not

be as dangerous as it was in the past, but we have yet to reach a comfortable level.

Has Pakistan got the bomb? "We don't know for certain that Pakistan is making or has made the bomb but all available evidences point in that direction," opined Subrahmaniam. Recently, even the Pakistanis have stopped denying they are making the bomb. On the contrary they have been asserting their right to make it.

The circumstantial evidence also proves that Pakistan is serious about the bomb. It has a uranium enrichment plant at Kahuta near Karachi. Pakistan cannot make any peaceful use of enriched uranium because its power plant runs on natural uranium. "Therefore", says Zuberi, "the only logical inference is that Pakistan is using enriched uranium to fuel a clandestine nuclear weapons programme." The country has also made painstaking efforts to acquire plutonium reprocessing facility. Reprocessed fuel too does not fit into Pakistan's atomic power plans. Some Pakistani scientists like A.Q. Khan have managed to smuggle vital technical information regarding nuclear weapons from a high security nuclear facility in Europe. Pakistan has also managed to acquire a large number of centrifuges of the type and specifications needed to process weapon grade uranium. All this indicates that a nuclear programme is taking shape in Pakistan.

Economics: There is a general feeling that nuclear weapons are so expensive that developing countries like India should not think of making it. They had better take care of their poverty. "This fallacy is propagated by nuclear non-proliferation literature; manufacturing nuclear weapons will make no difference to our defence budget," says Subrahmaniam. Zuberi observes that none of the present big nuclear powers "was in a buoyant economic state when it embarked on its nuclear weapons programme. The US, though not in economic straits, opted for nuclear weapons after Truman and Eisenhower had put a ceiling on defence spending." All these countries realised that "going nuclear was the only way to build a strong defence without having to spend too much money on it."

The US defence expenditure has escalated relentlessly since then and has reached a mind-boggling trillion dollar mark. That, however, is largely because the American security concerns are not limited to defending its

(Continued on page 68)

HOW TO MANAGE MANAGEMENT (Continued from page 29)

...above average knowledge of the language. It would not be an exaggeration to say that 'anything' associated with management has 'everything' to do with English—right from lectures, books of a very high standard authored by persons of international repute, mid-term and end-term exams, class quizzes to project reports and class participation.

It is, however, possible to get away with only a smattering of spoken English, so long as one is able to understand and write well. But as the rank-holder pointed out, "It is one thing to do well in exams. It is quite another to be recognised as smart and impressive. And at the time of final placement, smartness and fluency count a great deal with international names like the American Express, Bank of America, Citibank, Hindustan Levers, Grindlays, etc."

How does one learn to speak and write well? Perhaps the experiences of two people would help. One of them, a product of IIM, Ahmedabad, is presently pursuing a lucrative career in Hindustan Levers. Despite his public school background, he gave himself as many as 14 months to brush up his English for CAT. He would read the daily newspaper thoroughly, picking out difficult words as well as words he was familiar with, but the exact meaning and usage of which he was not sure of. He would even write down the words in

which they occurred. This way he not only expanded his vocabulary but also learnt how to effectively use it. Listening to BBC was a daily routine. It helped him learn to speak correct grammatical English and also improve his pronunciation.

The second experience, that of a first year student, has as its highlights participation in debates, extensive reading and listening to radio bulletins. The three have helped him develop fluency, so much so that he found it difficult to believe that barely three years ago, he spoke haltingly, always groping for the right word. Debates forced him to practise public speaking for long durations and radio bulletins supplied him with readymade sentences which he memorised effortlessly and used them on appropriate occasions. This helped him become a good conversationalist also. Reading, he said, gave him "a feeling of confidence and power".

If the opinion of some of the second-year students is taken seriously, it would appear as though students with a cost and chartered accountancy background have a bright chance of being very good management students, and later on, becoming good managers as well. This is, because, of the 21 compulsory courses in first year, as many as seven or eight have quite a lot in common with courses in cost and chartered accountancy. The two that were cited as excellent examples are Managerial Accounting and Control I and Control II. Even though it is a fact that students with this background invariably do extremely

well, the rank-holder insisted that if there is any advantage it is only in the initial stages. "What matters ultimately is not the discipline in which one has majored but his capacity for hard work." And what may be added here is the word 'brilliance'.

However, it would be wrong to assume that only people with brilliant academic achievements to their credit can hope to make it to the country's reputed management institutions. There are scores of examples of people who beat the CAT and later got the cushiest of jobs, in spite of their average performance. And this is true especially of students from the arts and humanities stream. "It is hardly surprising because what the CAT looks for in its challengers is worlds apart from what the decadent universities look for in their prospective graduates"—said a second-year who majored in Economics. He attributed his success in the CAT to his aptitude for Maths, good vocabulary and a brilliant extra-curricular record. Apparently, his accomplishments in music and drama had impressed the board so much that it questioned him only on these two subjects. He was even asked to sing!

It would not, therefore, be too far from the truth to say that as far as the CAT is concerned, having a good academic record is a great, but not an indispensable asset. In any case, as has already been discussed, what matters ultimately is a logical mind, a sound mathematical ability and capacity for strenuous effort.

(To be concluded)

DATA INTERPRETATION-2

(Continued from page 28)

will be $1120.76 \times 12 = 13,449.12$ units.

Problem-5

The seasonal indices for the sale of readymade garments in a store are given below:

Quarter	Seasonal index
January-March	98
April-June	90
July-September	82
October-December	130

If the total sale of garments in the first quarter is worth Rs 1,00,000, determine how much worth of garments of each type should be kept in stock to meet the demand in each of the remaining quarters.

station

Calculation of estimated stock

Quarter	Seasonal Index	Estimated stock (Rs)
Jan-Mar	98	1,00,000
Apr-Jun	$\frac{90}{98} \times 1,00,000 = 91,836.73$	
Jul-Sep	$\frac{82}{98} \times 1,00,000 = 83,673.46$	
Oct-Dec	$\frac{130}{98} \times 1,00,000 = 1,32,653.06$	

Problem-6

The average of wholesale prices was higher in 1977 than in 1976 by 15.1%, the index number for the two years being 108.7 and 94.4 respectively, (1970 = 100). This increase followed a rise of 6.1, 1.0 and 2.8%, each year being compared with the preceding year. In 1973 the prices were the same as in 1972, but 2.5% below 1971. Prices in 1971 were 12.2% below 1970. Based on this data, compute the index number for each year from 1970-77.

Year	Index numbers
1970	100
1971	$(100 - 12.2) = 87.8$
1972	$97.5 \times 87.8 = 85.6$
1973	100
1974	$102.8 \times 85.6 = 88.0$
1975	$101 \times 88 = 88.9$
1976	$106.1 \times 88.9 = 94.3$
1977	$115.1 \times 94.3 = 108.5$

(To be concluded)

FOR & AGAINST

Should We Have The Right To Die?

The word *euthanasia* is derived from the Greek words *eu* meaning *pleasing* and *thanatos* meaning *death*. There are times in almost everyone's life when the person is so depressed, whatever the reason, that he wishes to die. All over the world, today, debate is going on, whether a person has the right to die. One of man's fundamental rights is his right to live. Can he now be given a fundamental right to end his life if he chooses to do so? The debate has spread to India, too. On Jul 6, the Maharashtra Legislative Council admitted a motion to circulate a Bill for eliciting public opinion on conferring the right to die. There are many points in favour of the issue and many against.

For

■ With the advent of powerful drugs, mechanical devices, surgical advances and implant of others' or artificial organs, people are sometimes kept clinically alive for years. They may feel mentally tortured because they may not be capable of doing anything on their own. Hence they may wish to die.

■ If a person has an incurable disease, which worsens progressively and becomes more painful, he may be given the choice to die.

■ Abortion is allowed in many countries. Here, the mother is given the right to kill an unborn child without its consent. How then, can the right to choose between life and death be withdrawn from a conscious person?

■ Certain individuals with psychiatric disorders undergo physical and mental torture and do not obtain adequate relief despite the best medical efforts. Under such circumstances, mercy killing is a welcome alternative.

■ Capital punishment and declaration of war involve decisions on other people's lives. These are taken in the larger interests of the people. Can an individual, therefore, be denied the right to end his own life in his own interests?

ESSAYS

(Continued from page 64)

will desert it and move to another land, another place.

The ecology of mountains is a delicate miracle of nature. Such reckless devastation of hill vegetation by jhum farmers will have disastrous consequences—soil erosion, silting of river beds and floods leading to more soil erosion. The most conspicuous result is, of course, the loss of arable land year by year to expanding deserts. Those who practise jhumming are among the most wretched and primitive of Indian farmers. In the north-east region alone, some 4,92,000 farmers practise this nearly nomadic form of cultivation, affecting an area of 26,94,000 hectares. It is against this rather grim backdrop that scientists at the Indian Council of Agricultural Research (ICAR) are devising alternatives to shifting cultivation and means to emancipate jhum farmers.

Improvement of jhumming was studied in terms of improved crop

strains and use of fertilisers, weed control and control of soil erosion. Contour bunds in jhum lands check soil loss to a great extent and if continuously farmed upon the lands could turn into thick and lush bench terraces. High-yielding crop varieties to replace the traditional ones have been identified. Studies have revealed that the ideal period for sowing is between April and first week of May, and that granular fertilisers, sown alongside the seeds, trigger a 50-60% increase in the yield. Further, researchers have shown that watershed-based farming in concert with appropriate production technology (land-use) and provisions for subsidiary sources of income can provide an ideal alternative to shifting agriculture.

The main crops grown on hill slopes are paddy and maize alternated with minor crops such as finger millet, fox tail millet, beans, tapioca, yam, banana, sweet potato, ginger, cotton, tobacco, chillies, sesamum and vegetables. These crops have to be mixed with one another and sown

Against

■ Even though the doctors may declare a person as a terminal case he might recover miraculously. By giving the patient the right to die, one would withdraw all his chances of recovery.

■ Suicidal fits are caused sometimes by extensive depression. Quite often persons do not commit suicide because it is illegal and they would be punished if they were unsuccessful in their attempts. Conceding the right to die would increase the suicide rate all over the world.

■ From the religious point of view, suicide has long been considered a grievous sin by all religions. Since we do not know much about thereafter, should we tamper with the laws of nature and indulge in unnatural death.

■ It would also make people more irresponsible, since they would know that there was an easy way out in case of problems. Debtors, poverty stricken people, criminals, etc could all follow the escapist route with ease. This could also create complications in the legal field since criminals could demand the right to die instead of facing punishment.

■ The saying goes that where there is life, there is hope. Is it right to take away hope, by giving people the right to die?

S.B.

according to a planned land-use model to get the best results. A five-year long study by ICAR has revealed that cultivation on scientifically prescribed land-use patterns led to a dramatic improvement in yields. The pattern found most suitable was agriculture on bench terraces and foresting crops on upper hill slopes. Ragi and maize can be grown on upper terraces and rice raised on lower terraces, for assured yields. Besides, rabi crops such as urad and mustard could be cultivated as second crops under rainfed conditions. The experimenters observed that double cropping of maize and urad is extremely profitable.

The efforts of ICAR scientists have proved that jhumming can be arrested and farmers uplifted. It has placed in our hands the technology and the know-how to reverse a practice with an age-old history. For the farmers in these regions time has stood still for innumerable years, and by continued jhumming, they are perpetuating their misery.

S.R.

TEN YEARS IN RETROSPECT

BY SANJUKTA BANERJI

Recently Nairobi was a women's world. Women from all corners of the globe streamed into Nairobi to participate in a conference marking the end of the UN Decade For Women (1975-85). The conference reviewed the achievements of the last 10 years and discussed ways to further improve the condition of women. Here is a report on the conference based on an interview with Neerja Chaudhuri, the Civil Rights correspondent of *The Statesman* and a part of India's delegation at the conference.

For 10 years the UN tried to focus on women's problems and turned the world's attention to the other half of the population of the globe. The period 1975 to 1985 was declared the UN Decade For Women. Women's organisations sprouted up in every country and funds flowed in, not only from the UN, but from several other funding agencies. It was at Nairobi that they all assembled—delegations from every conceivable part of the world—and discussed not only the past and the present, but also the future of women the world over. The Nairobi Conference marks the end of the UN Decade For Women.

What were the gains made during this decade? Researches have found that although inequalities still exist, giant strides have been made towards bringing about equality in societies. Literacy and life expectancy rates have gone up and during the decade, 90% of the governments all over the world have passed equal employment legislations or have incorporated equality clauses in their constitutions. Further, most governments have introduced mechanisms to oversee that women get equal treatment. In India, for instance, there is the Ministry for Social and Women's Welfare.

According to Neerja Chaudhuri, the Civil Rights correspondent of *The Statesman* and one of India's delegates to the Nairobi Conference, the major achievement of the decade was world-wide awareness of women's issues. Today the women's question—basic dignity and equal rights—has global significance and is no longer a marginal or peripheral issue. As Neerja pointed out, "Seldom in history has one idea gripped the globe like this." However, the decade has also documented the existing inequalities, she said. Women performed

two-thirds of the world's work, but earned only one-tenth of the income and owned less than one-hundredth of the property.

One of the striking features of the Nairobi Conference was the lack of emphasis on the man-woman interpersonal relationship. Neerja pointed out that although this is important people seem to have realised that women's issues do not revolve around this alone; and in the much wider struggle for a more equitable society the co-operation of men is indispensable.

At Nairobi, a large number of issues were discussed, for instance, famine, apartheid, violence against women in all its manifestations including dowry deaths and forced prostitution, health, employment, the adverse effect of some pharmaceuticals, agriculture, etc. However, what was striking about the conference was the wide presence of Third World women and their endeavour to establish a link between rural women and the world. The Third World women asserted that developmental issues cannot be divorced from what are uniquely women's issues.

But what did we, Indian women, get out of the women's decade? Most would agree that even today, the women's issues are "soft" issues in India. In fact, women in India face a triple exploitation—that of caste, class and the exploitation that is peculiar to women, regardless of class or caste. Neerja, however, was somewhat optimistic because of the dynamism shown by workers of the women's movement, who have been trying to arouse consciousness not only in the urban areas but also amongst rural people. However, change in attitudes is vital and for this a frontal attack is required. Neerja suggested that the media could help in this respect by raising the awareness of the people.

Although we have come a long way, we still have a longer distance to cover. The last decade raised the consciousness of people, and now what is required is the implementation of programmes and policies which will ensure the equality of women in every sphere, social, political and economic. What is needed now is more action and less advocacy.

INDIA'S NUCLEAR OPTION

(Continued from page 85)

own frontiers. They have taken the responsibility of defending friendly nations and allies all over the world.

The economic factor may silence those who give the 'poverty-first' argument, but the fact is a broad nuclear programme with submarine-based nuclear warheads and overkill capabilities cannot in any case be suggested for India. The best approach for us should be that adopted by France: a few bombs, meant only for defence against any possible nuclear attack. What De Gaulle said: "If someone attacks us we will hack one arm off the aggressor," should be true for us. If India adopts such a strategy, its defence budget will not be very different from what it is today.

A political weapon: Nuclear weapons have become obsolete as a tool of warfare. These arms are solely political weapons, "weapons of terror," and are useless since their use would annihilate the user. But they can be used as a potent weapon to blackmail non-nuclear states. "If India abstains from making the bomb while Pakistan makes it, it will lay itself open to nuclear blackmail," feels Zuberi.

There are, of course, dissenters. They believe that if India makes the bomb it will irrevocably alter the security environment of this region. They contend that India, owing to its geo-political situation, sets the political and social pace among the South Asian nations, and if it goes nuclear the other nations of the region will follow suit making South Asia as vulnerable to a nuclear holocaust as Europe is today. A nuclear India, they feel, will launch an entirely new set of diplomatic and military forces in the region.

As to the political uses of the weapon, this school feels that "if you need a gun to sell a cause, it is not worth selling." And Muchkund Dubey, India's permanent representative in the UN in Geneva, believes that "deterrence is the biggest conceptual fraud devised in all history; it feeds on fear and deception and has the effect of eroding trust."

All this is good, moral stuff, but can we entrust over security to the supposed goodwill of other nations, especially a nation that has attacked us thrice in the last 40 years? The basic question is that if India is attacked with nuclear weapons, can it defend itself with the defence system it has? In all probability if we produce a "bomb" we will never have to face a nuclear conflict.

Break

RAJANI...

The female of the species is deadlier than the male. Or at least, the Rajani of the species is! As is proved episode after episode every Sunday morning. Much to the delight of her already large fan following all over the country and to the chagrin of those who come into her line of attack.

The recent commercialisation of the Indian TV and the subsequent mass addiction to TV serials resulted in a virtual flooding of the small screen with serials of all shapes and sizes. Producers, manufacturers and advertisers, eager to dabble their hands in what promised to be a lucrative venture, began spewing out sponsored programmes by the dozen. *Rajani* too began as yet another hastily made inane TV serial. But it took only a couple of episodes to make it one of the most popular programmes. Made by Basu Chatterji, noted film director, *Rajani* is characterised by his distinctive touch of witticism and humour. But what makes *Rajani* stand out in comparison to other similar ventures is that it is socially relevant even while being entertaining.

For Chatterji's *femme fatale* deals with the daily hassles ordinary urban middle-class people are struggling with. A crusader-in-arms, a modern Joan of Arc, she battles her way out of problems, and in the process exposes social evils and corruption prevalent in the various walks of urban life. Flattening wrong-doers

...THE ANGRY YOUNG WOMAN

Above: What's cooking? Rajani in her element pulling up a corrupt gas dealer. Above left: The face that waged a thousand wars.

with her sharp tongue, no-nonsense attitude, Rajani has become the angry young woman of Doordarshan—a superstar in her own capacity. And a trend-setter for the middle-class housewife as she handles one difficult situation after another week after week with alacrity and aplomb.

With the emergence of Rajani, Indian consumerism has also come of age. For she incites consumers not to take things lying down and fight against injustice, corruption and dishonesty. But what drew the apostle of action into the vortex of a controversy and catapulted her to fame were her encounters with a corrupt gas dealer and taxi-driver. In the now famous gas dealer episode, Rajani confronts a gas dealer doling out cooking gas cylinders to those who pay illegal premiums while consumers, queued up outside the depot, wait in vain. Not only does Rajani refuse to pay the premium, she has him jailed for dishonesty while she herself basks in the warmth of fire emanating from the cylinder she finally obtains—by just means! The screening of the episode had the All India LPG Distributors Federation clamouring for an apology for what

they called an unjust maligning of their trade. In the other equally famous episode, Rajani takes a cabbie for a ride to the nearest police station. The taxi-driver who refuses to take Rajani on a short fare lands himself in trouble when a determined Rajani not only refuses to vacate the taxi until he takes her to her destination, but also has him arrested for undue harassment. Incensed by the episode, 500 angry taxi-drivers demonstrated outside the Bombay offices of Doordarshan demanding an immediate apology for this alleged slandering of their reputation. Not that such controversies daunt Rajani, for she moves onto new battlefields every week.

And, in the process, has made Godrej products and Priya Tendulkar the actress who plays Rajani, household names. The impish-looking, light-eyed and long-haired Priya is not only a colourful person on screen—but off screen too. Nurturing ambitions of becoming a great painter, she breezed her way through art school, a printing press, and a bank. And then after short stints as restaurant hostess and Air India stewardess, she settled down to acting. And obviously she's doing a good job of it for the Rajani role seems tailor made for her.

But whoever plays Rajani doesn't really matter. Programmes like this will be popular anyway. Motivating several Rajanis to emerge from their cocoons and join the crusade against social evils, Chatterji's new superwoman has heralded an era of meaningful entertainment on Indian TV which was fast becoming an idiot-box. And even if *Rajani* isn't here to stay, one only hopes that programmes like it are.

Jyotana Sharma, New Delhi

Make Believe

Once a curious young man went to a museum and asked a sculptor about his creation in sheer hard rock, an elephant.

"Will you please explain to me the easiest way to carve an elephant out of rock?"

"Er, well. First draw a picture, then take the measurements..."

"No sir, but I want to know the easiest way," interrupted the young man.

"Well, my young friend," said the sculptor, pointing at a hard rock. "...look at this plain rock, and chop off every part of it that does not make it an elephant. And you have an elephant coming out of it."

Shuchi Shukla, Lucknow

Father: How is my youngest son doing "history"? I was never a shining light at it.

Teacher: History is repeating itself.

Md. Sadique, Gaya

From The Club Desk

The mail had many surprises in store for us this time. Each club had a new activity to report. While we were still marvelling at their enterprising efforts, in came the lead story:

Sanjiv Kumar, founder President of CCTimes Club, Allahabad (A-6) had cleared the Civil Services Exam (his old-India rank is 69) in his very first attempt this year. In his own words: "I wish to go on record by expressing my deep gratitude to CCTimes for its excellent coverage of news items, deep and incisive analysis of current events as well as features on the Indian cultural scene (dance, theatre, etc)."

Equally eager for success in the IAS, CCTimes Club from Jalgaon (J-3/1) roped in local professors for guidance classes. Members were also encouraged to speak up on important GK topics. The club is looking for hints on what kind of help they could provide their members preparing for the Civil Services Mains. To begin with, you could have exhaustive newspaper and magazine reading sessions, noting information on all relevant topics, and updating one's awareness of current events, studying the lead write-ups on the editorial pages of dailies, maintaining clippings files for the General Studies paper, arranging for lectures by local professors (like you've done for the Prelims) and holding discussions on various national and international topics.

Now for some off-beat news. CCTimes Club, Digapahandi (D-6) went on a sightseeing tour to a nearby hill and discovered an ancient temple built in 1722 A.D. by a local king of the area. Indoors, they held a seminar on 'Development of the computer and its use in the present society'. And arranged a marathon (six-hour long) symposium on Independence Day on 'The National Movement in India'.

CCTimes Club, Bijnore (B-9/1) has sent in a long activities report. They had organised an all-India Science essay contest. The topic—"We cannot do without Science". It was followed by a district-level debate contest on 'Science has eroded moral values.' Then there was a GK quiz conducted on the pattern of QUIZ TIME; a poster exhibition on environmental pollution and its lethal effects on animal and bird life (where have all the 'dodo' gone?). Needless to say, there are no two opinions

A Rakesh Sharma in the making at Coimbatore.

about the 'Club of the Month' title.

Wisdom Rendezvous, Hyderabad (H-4/5) stretched its wings to book a 45-minute variety programme on Yuv Vani with AIR, Hyderabad. The items included were a skit on national integration, a group discussion on 'Impact of terrorism on a developing nation' and a quiz.

And how about this? CCTimes Club, NDRI, Karnal (K-18) has got permission to organise the Dr Sunderesan Memorial GK Trophy for an inter-college GK quiz contest. Dr Sunderesan was former director of NDRI who died about three months ago.

Here's another opportunity to display your writing skills. CCTimes Club, Jalandhar (J-10/3), is organising an essay competition on 'Youth and the 21st century'. Last date for sending entries: Nov 5.

QUIZ TIME: Award function of a quiz organised by CCTimes Club, Bijnore.

First prize winner gets Rs 100 in cash, second prize winner Rs 50 and the third prize winner Rs 25. The essay should not be more than 3,000 words in length. As for the photography contest announced by CCTimes Club, Coimbatore (C-8/1 and not C-8/10 as inadvertently published in our August issue) in August, its closing date has been extended to Oct 25. The club has been up to a lot more since the last time we heard from them—they donated about 5,000ml of blood to Coimbatore Medical College Hospital; they held an inter-collegiate painting competition in which about a hundred budding Ravi Vermas and Pablo Picassos participated; there was a fancy dress competition for school children where, who do you think walked in—none less than Rakesh Sharma, Jesus and Indira Gandhi!

Many more clubs have written in to us about their activities—the usual kind and off-beat. Some enterprising clubs have even sent in photographs which are being reproduced here. For those clubs which are looking for topics—"Should India go nuclear?" "Should jobs be delinked from degrees?" (group discussions) "The new education policy" and 'India in the 21st century' (seminars). 'International terrorism' could also be an interesting subject for debate as discovered by a new arrival, CCTimes Club, Banks (B-23).

We'll be back next month with more reports and suggestions.

Stars And Careers

If you were born between Sep 22 and Oct 22, the Sun on your birthday occupied Libra, the seventh sign of the zodiac. As such, Librans are well-balanced, amiable, very refined, great lovers of justice, and equable persons to live with. They are capable of taking a dispassionate view of life, seeing both sides of a subject very clearly. Endowed with an excellent perception, they are also sensitive, approbative, fond of pleasure, ambitious, generous, intuitive, harmonious and artistic. Librans love praise and produce further good results when admired and generally they deserve to be praised. Very sociable by nature, they always like to be associated with others.

Librans are healthier than most people. In fact, an instinct for sanity keeps most Librans mentally healthy and physically fit. The biggest threat to their health is over-indulgence, which can bring on obesity, stomach disorders and mottled skin. Ulcers harass many a Libran, caused not so much by worry as by abuse of the digestive system and the topsy-turvy emotional make-up.

People born under this sign will generally be successful as designers, artists, musicians, singers, librarians and secretaries. Professions which involve public-dealing suit Librans best. They are well-advised not to seek any trade or any profession which has fixity or permanency. Librans will get along very well with people born from Jan 21 to Feb 18 or from May 21 to Jun 20.

On Nov 17, Saturn will move to Sagittarius and stay there for more than two years. Uranus is already occupying this sign. Both these planets will be trine to the Libran natal Sun. This is a most remarkable position. And, it within the next two years, Librans fail to satisfy their aspirations, the fault will be entirely their own and not of the planetary influences. This combination will give them good health, robust self-confidence and intensify their desire to achieve some spectacular success. Jupiter and Mars will occasionally lend them much support. This position will not be available to any other sign of the zodiac. Librans must set their targets—short-term as well as long-term—and concentrate on achieving them. Resounding success is guaranteed.

Till January, Jupiter will be very favourable to Librans for establishing good rapport with their superiors and expanding their social circle. It is also a favourable period for marriage. Thereafter, Jupiter will brighten up their career prospects. The present contacts will prove very helpful in this regard. Around February and March next year, Mars will favour improvements in finances and may even bring windfalls. Around May and June, health may need more care.

BE TALLER

GAIN UP TO 15 CM WITH NEW TWO WAY

STRETCH

"After taking a number of courses, I have been able to gain up to 15 cm in height. I am now 1.80 m tall. I am very happy and healthy. I am now a successful businessman." — Mr. J. K. Sharma, Delhi.

"After taking a number of courses, I have been able to gain up to 15 cm in height. I am now 1.80 m tall. I am very happy and healthy. I am now a successful businessman." — Mr. J. K. Sharma, Delhi.

"Lengthen your body, gain weight, become healthy, make other people love you. THE NEW Two-Way Stretch is the only product to give growth taking place in the body. It is not All the Difference is in the growth of the body. Perfectly a 15 cm. growth in height. Successful Research in the body. Perfectly upto age 24. The growth potential is greatly reduced. The growth is beautifully printed and color coded. You will grow taller and healthier with this New Scientific system. And men, girls look more attractive. So join you!"

CREATE AWARENESS

If the impact of an exhibition on national awareness is determined by the extent to which the exhibits catch the eye, grip the mind and leave a lasting impression on it, then this year's exhibition comprising selected entries, submitted to compete for the Ashok Jain Award For National Awareness Advertising, can certainly claim distinction of a very high order. Instituted last year, the awards are the only one of their kind, promoting articulation of socio-cultural concern in Indian society.

The evils of bride-burning, rape and prostitution were brilliantly projected by Arun S. Gongade from Bombay in his visually powerful, award-winning three-part campaign using a subtle mutilation of photographs. Thus bride-burning was conveyed through a charred photograph and rape through a crumpled photograph.

Corruption, over-population, lawlessness and illiteracy—problems that are eating into the vitals of present-day India. The invaluable role that a single individual can

play in fighting them was underscored through a four-part campaign that was an effective blend of photographs and balanced copy. This entry won for its creators the award for 'the best campaign in English'.

"According to reliable sources, one way to save yourself from coughs, colds and flus in a big city is simply to hold your breath"—ran the copy below one of four eye-catching illustrations in photomontage, a campaign that quite understandably bagged the award for 'Thematic Brilliance'. It very effectively detailed the effects of noise, water, air and industrial pollution.

"Need we kill humans to keep our gods alive? To change India for the better, let's

begin with the Indian you know best. Yourself"—a simple yet powerful message that formed part of a campaign that was adjudged winner of the cash prize for 'Inspired Copy Writing'.

Among the other winners mention must be made of the 'best entry from young amateurs under 21'. Vikram Vasant Tavate of Bombay made a surrealist use of pen and ink-line drawings to take a look at the issue of national unity through various angles. At a time when divisive forces are threatening to tear the country asunder, the necessity for the young mind to grasp the value and importance of national unity can hardly be over-emphasised. There is, therefore, an urgent need to instil in the youth a sense of pride in calling themselves Indians first and Gujaratis, Maharashtrians, Tamils, Bengalis, Assamese, etc second. It is indeed heartening that the theme of this year's winning campaign in the under-21 category is in tune with the times.

V.K., Delhi

Top: Eye-openers: Crucial problems of the day are effectively highlighted in this four-part campaign. Below: Triple exposure: Arun S. Gongade's award-winning three-part campaign on dowry deaths, prostitution and rape makes excellent use of mutilated photographs.

DESIGNED FOR YOUR SUCCESS

CCTIMES VOLUME '84

Here come 12 information-packed ready-reference issues of CC Times in an attractively bound volume covering every single ingredient for your success!

**If you're over 18,
and have stopped growing,
but are still not as tall as
you'd like to be, INSTA-HEIGHT
guarantees to increase
your height upto 15 cms.**

"INSTA-HEIGHT is a new, safe and scientific method of s-t-r-e-t-c-h-i-n-g your body to increase your present height. Permanently. Thousands of men and women in the U.S.A. have reported height gains of upto 15 cms by following this revolutionary new height increasing method. I am not surprised. I have thoroughly analysed INSTA-HEIGHT. Unlike other so-called height improvements methods, I can fully endorse INSTA-HEIGHT and say it works Effectively and permanently"

Ghanani
Dr. (Mrs) D. U. GIANANI

TALL MEN AND WOMEN DOMINATE OTHERS !

You are judged by your looks ! Often, your whole career depends on the first impression you create. Look around you and see for yourself, most people who are successful have the added asset of a tall and imposing personality.

INCREASE YOUR CHANCES FOR SUCCESS !

The taller a person, the more easily he seems to reach social success, love, sports, jobs and other pleasures. You too, can now enjoy the benefits of being tall.

Whether you are 18 or 30, you can still possess the tremendous assets of a striking figure just 2 weeks after going through and practising this simple step-by-step course, you will be able to gain as much as 5 cms. to 15 cms. in height. Thousands of men and women in America have experienced phenomenal height increases by following the revolutionary new INSTA-HEIGHT method.

SPECIAL 7-DAY MONEY-BACK GUARANTEE !

INSTA-HEIGHT (a division of Business Development Associates)
3/305, Navjivan Society, Lamington Road, Bombay 400 008

Please rush me your Insta-Height programme immediately under your one-week guarantee period. If I am not satisfied I understand I can return it within a week for a full refund (less packing and postage)—no questions asked. Please tick ☐ appropriate box.

Science can enable you to develop muscle power you never suspected you had

In just 14 days you can prove it for yourself with this Free Home-Trial Offer!

A Revolutionary scientific breakthrough in Isotonic/Isometric principle developed at the Max Planck Institute in Germany produces results **THREE TIMES FASTER** than conventional methods of exercise! In this special 14 day home trial offer you can prove to yourself the unbelievable increase in strength Bullworker can bring to you—results in 14 days or you pay nothing!

Transform your arms

Thin, weak biceps and forearms develop amazingly fast as soon as you begin with Bullworker. Many reports of over 50% improvement have been recorded in the first 3 months. The first week's programme include two exercises specifically aimed at improving your arms—that's just 28 seconds of your time every day to produce bulging steel-hard biceps.

Forearms charged with new strength.

Manly rippling biceps

Triceps well defined.

Shoulders and chest of a he-man

Proud up-right posture

Shoulders and chest bulging with muscle

Dynamic muscle packed body

Trim away flab from your waist
Athletic looking legs

Stomach a true wall of muscle

You will be amazed that such an easy, quick, non-tiring method can produce results so fast. Develop that massive he-man chest all the girls go for... and muscular shoulders that will fill out shirts

Use the Bullworker for only a few minutes a day for 14 days. If you do not look and feel fitter, with results you can measure and see in your mirror, then return the Bullworker to us and owe nothing—it's yours **FREE** for 14 days home trial.

RESULTS IN 14 DAYS OR YOU PAY NOTHING!

BULLWORKER

with bulging muscles. Find a new zest for life, radiate the energy and super self confidence that only real fitness brings.

Ashamed of the way you look? This could be you after just a few weeks using Bullworker.

Are you letting yourself go and laughing it off? Is your lifestyle weakening your body? Then it's time you did something about it—but what? Conventional exercise is both time consuming and costly—and most of all, boring! Now there's an easier, faster, more interesting way to keep your self trim to tone up your muscles.

Bullworker just 5 minutes a day is all it takes to achieve remarkable results with Bullworker just look at these exercises.

1. This exercise develops a deep powerhouse chest.
2. This builds huge steel-hard rippling biceps.
3. Here's how you can develop muscular shoulders.
4. Mould flabby stomach into a solid wall of muscle.
5. Here's how to attain that handsome, athletic "V" shape.

FREE

Complete 24 pg booklet
Illustrated Exercise Wallchart
Nutrition & Training Guide and
top quality Neume Carrying
Case for a life long protection
for your Bullworker 3

Available by V.P.P. for
Rs. 314/- from
Bullworker,
Mehta Mahal,
15, Mathew Road,
Bombay 400 004

Bullworker—the World's leading body builder.

The Bullworker is superbly engineered from high grade steel, chromium plated. The traction cables are steel cord. Every Bullworker is tested before despatch. Use the Bullworker regularly and you will be fitter and stronger than ever before. Many professional athletes like Peter Shilton, Eddy Merckx, and even Muhammad Ali recommend Bullworker.

EXCLUSIVE BUILT-IN POWERMETER

This feature, exclusive to Bullworker measures your day-by-day increase in muscle power. As you compress Bullworker the force of your muscles slides the power gauge along a specially calibrated scale, so that each day you can see at a glance the massive increase in power which you achieve for every group of muscles in your body.

*Letters from 1000's of men all over the World testify to the effectiveness of Bullworker—it works for them it can work for you! Develop a manly physique—feel fitter, confident, stronger.

*No more boring, repetitive exercises... no sweat... no strain... just simple seven second exercises only 5 minutes a day!

SCIENCE CAN GIVE YOU A PERFECT BODY—EASILY.

MAIL THIS COUPON TODAY

BULLWORKER Mehta Mahal, 15 Mathew Road, Bombay-400 004. **543**

Please rush me BULLWORKER-3. I understand if I am not fully satisfied within 14 days I may return everything for an immediate refund of price (less handling & forwarding charges)

Please tick appropriate box.

BANK RECRUITMENT

PROBATIONARY OFFICERS

1429 PROBATIONARY OFFICER VACANCIES IN NATIONALISED AND ASSOCIATE BANKS.

230 PO vacancies in Canara, Syndicate, Corporation, Vijaya Banks, 825 officer vacancies in Bank of India, Union Bank of India and Bank of Maharashtra and 374 PO vacancies in Associate Banks.

Other nationalised banks are expected to advertise more PO vacancies shortly.

You can also be one of them.

Banking: A Rewarding Career:

Nearly 2500 Probationary Officers are recruited every year by Banks in India. This avenue of direct recruitment as Probationary Officers in Banks offers a promising career for bright young people today. Any graduate between 21 and 28 years can apply for the post. The job brings a handsome remuneration, security of service and job satisfaction. The work content is rich and varied. And, after nationalisation, Bank jobs have acquired a new status, because now the Banks have taken upon themselves the responsibility of building a better India. Today, in our Banks, our social ideals find a dynamic expression. Bank jobs, therefore, offer the opportunity and challenge to participate in shaping our country's future.

Our Professional Commitment

We coach in regular Courses at Bombay, Pune and by POSTAL TUITION throughout India for objective and descriptive test of PO exams. All subjects—(1) Reasoning (verbal, logical, non-verbal) (2) Quantitative Aptitude (3) General Awareness and Current Affairs (4) English Comprehension (5) Essays, letters, precis writing—are covered exhaustively. Specialised practice books on all subjects covering thousands of typical and actual exam questions are supplied in the Course. These books are not sold to others.

Success Earned is Success Deserved:

We are just a few years old but our successes have been noted across the country. Help and recognition have come from everywhere and in abundance. Test after test, hundreds of our students join the 20 Nationalised Banks, State Bank, Associate Banks, LIC, GIC, ECGC as Officers. The subjects, syllabus, pattern of tests and examining body (NIBM) for all these exams are same. Naturally we have a single common BRPO course for all these exams. Success-oriented students join the Course well in advance of the test and benefit by our step-by-step and exhaustive coaching. Admissions are open round the year but the number of admissions is limited to the number of vacancies declared by Banks.

Selection on Merit through Competitive Exams:

When vacancies of Probationary Officers are declared at intervals of almost every three months by one Bank or another, large numbers apply for them and appear for the intensely competitive exams based on general intelligence tests. Standards of evaluation are most rigorous and impartial. The percentage of success is lower than 0.5%. Therefore, every single additional mark that you can get becomes important. A properly competent, specialised and thorough coaching becomes a MUST.

NSB's Faith in Specialisation:

National School of Banking, headquartered at Bombay, was founded years ago as a specialised institute providing coaching mainly for BANK RECRUITMENT exams—of POs and Clerks. It has grown rapidly and is now the largest pre-recruitment training institute in the country. Our continuous research and on-going study of objective and descriptive exam question papers have contributed to our present pre-eminence as the central institute for BANK RECRUITMENT training.

JOIN NOW AND PREPARE FOR A RICH AND REWARDING CAREER.

For details of vacancies, application forms and our special courses, please contact personally or write today with Rs. 2/- P.O./M.O. to:-

LETTERS

Pollution And Morals

If moral pollution can be eliminated from the world, all other pollutions like air pollution, water pollution, sound pollution, and nuclear pollution will be automatically eliminated.

K. L. Choudhary, Indore

Best Letter: Rs 40

Peace Without, Violence Within

India is said to be an apostle of peace. She appeals for global peace and brotherhood. But it is the cult of violence which is threatening her very existence.

Rajiv Dutta, Muzaffarpur

Prize-winning Letter: Rs 25

No Cure For Enduring Problems

In remedying the problems which continue to plague the lives of millions in India, the politicians in power follow the principle—what can be endured must not be cured.

Shibendu Chattopadhyay, Chokdighi (Burdwan)

Legal Disorder

The more the number of laws passed, the worse is the law and order situation in the country. Is there an inverse relationship between law and order?

V.K. Barak, Dhanbad

Man—A Paradox?

It is rather paradoxical that while man has made spectacular progress in the field of science and technology representing unparalleled development of the superior human intellect, at heart he is still uncivilised. He has not been able to overcome the lower human instincts, such as violence, hatred and lust for power!

Sushrut Pant, New Delhi

Intelligence In Fits And Starts

The recent bomb incidents, not to speak of the earlier traumatic events, are a very sad commentary on the state of affairs. When something sensational happens our intelligence becomes the epitome of vigilance. The moment there is a semblance of normalcy it falls into a coma.

K.S. Viswanathan, New Delhi

Irony In World's Priorities

One million dollars are being spent every minute by developed countries of the world for defence equipment. An equal number of children die daily in the Third World and in other underdeveloped countries due to malnutrition. When will the world learn to be more balanced and practical?

Pradeep Shenoy, Belgium

Nuclear Explosion To Curb Population Explosion

Is the nuclear bomb being made today by more countries in the world to counter population boom?

Lakshmi Kamalakar, New Delhi

Pavement Dwellers And Democracy

As regards the much debated topic *Should Pavement Dwellers Be Evicted?* (Sep '85), in a democracy, every issue should be judged with the intention of doing the greatest good to the largest number of people.

Now the pavement is not meant for dwelling because it becomes unhygienic and affects the health of the common people. So what the opposers of the proposition are trying to do is nothing but asking the common man to sacrifice his civic amenities.

Prabir Kumar Samanta, Calcutta

Always Tomorrow!

Almost the same Punjab accord could have been signed in 1982. Also a similar accord on Assam could have been reached in 1980. Procrastination is an old habit of Indian politicians.

Pradip Somantary, Bhubaneswar

Solved Problems Unsolved

Rajiv Gandhi solved the Assam and Punjab problems. Adding one more feather to his cap. But even after solving the problems they remain problems.

M. Sultan, Patna

Futility Of Paper Accords

The Punjab accord led to a chain reaction of three brutal murders in the capital. This only goes to prove that the signing of a few papers cannot solve the present problems. Effective measures have to be taken at the appropriate time and place to prevent such heinous crimes.

Bharat Parashar, Delhi

For The Indian Consumer

In *Hello Folks* (Sep '85) you have correctly pointed out that the Indian consumer is neither alert nor bothered about what he wants. He is not completely at fault. If India also has an open market like in the US, local producers will become more alert and will try to improve the quality of goods and at the same time they will also reduce the prices of consumer goods.

K. Jai Shankar, New Delhi

In my view, a consumer cannot fight on his own. A consumer who protests is harassed. A group of consumers who form a consumer organisation can perhaps help in this regard.

R. Rajesh Gupta, Ahmadabad

Superpower Chess Game

The US Government's dual policy regarding South Africa, Lebanon, El Salvador, Pakistan, and Russia's dual policy towards Afghanistan, Vietnam, North Korea and Nicaragua reveals that today's international polity has become a chess game.

Sanjay Panday, New Delhi

Bombed Peace

With reference to *The Day After* (Sep '85), I would like to emphasise that the world wants peace

but through the bomb! Apparently we want a planet where there will be peace, grey ash and silence.

Daric Singh Yadav, Kota

Festival Of India In India?

In *Festival Of India* (Sep '85), the writer has mentioned several important and significant facts unknown to many of us, about the Mahabharata, our folk and classical dances, Indian art and architecture, etc. So should there not be an exhibition or festival in India to make us aware of our rich cultural heritage?

Vineet Chandra Tiwary, Varanasi

Game Of The Ruling Elite?

The extravaganza that the 'Festival of India' is, expresses the ruling elite's ability to exploit the decorative value of our culture. The real India after all does not consist of pleasant half-truths dished out with an exotic flavour.

Vinod Kumar Sinha, Patna

India Through A Dreamer's Eyes

With reference to the Festival of India, India is not a country with dust, heat, snake charmers, cock fighters, naked begging children and filthy places. It is beautiful. It is ebullient. It is lovable.

Samidha, Manipur

Surfeit Of Education Policies

It seems Indian efforts at education are limited to changing educational policies. Education is barely having an effect on the character of individuals.

Sanjoy Sanyal, Calcutta

Utterly Ridiculous!

A modern employer is one who is looking for men and women between 25 and 30 with 45 years of working experience.

Shiv Pratap Singh, Aligarh

P.S. Bhatnagar

I was delighted to read the article on P.S. Bhatnagar. It is amazing that such a high profile official keeps his literary penchant alive amidst his busy working schedules.

B.G. Gnanadev, Molakalmuru

COVER CREDIT

WIN A PRIZE

Do our articles provoke you to say something? Is there anything else you feel strongly about? Here's your chance to say it and make some money in the bargain. The best letter will win Rs 40, the second Rs 25.

So, why don't you get cracking?

Your letters should be legibly written/typed, not exceed 200 words and include your full name and address. We may edit them for purposes of clarity or space.

Hello folks...

The candidate just cannot afford to play loose with time. Inefficient time-management has spelt the downfall of many a brilliant aspirant," a freshly admitted student of IIM Ahmedabad told Vijay Konwar. Realising that time is an important resource, I walked across the street to find a book on time-management. I could lay my hands on *Time-Management For Executives* by Lauren Robert Januz and Susan K. Jones (Rupa & Co. 3831 Pataudi House Road, Daryaganj, New Delhi 110 002). Though titled 'for executives' and written for the Western readership, I found it useful.

Managing time is everybody's number one problem, says Peter F. Drukker, the father of management studies. Those who really want to achieve results do not plan their work, they plan their time. If you manage your time effectively you can work faster. Not only that, you can find sufficient time for relaxation and recreation.

God, the greatest socialist, provided equal time to all—rich and poor, intelligent and ignorant, accomplished and unskilled. Although you cannot expand the 24-hour day, you can train yourself to do more in less time without being fatigued or losing effectiveness. The key to good time-management is to work faster, and not harder. This applies as much to your method of getting dressed for work as it does to planning your studies before preparing for or even appearing for the exams. Remember time is not a free gift. Time is as valuable as money. Therefore think in terms of spending time like a careful consumer to get the best value

for it."

Take a closer look at the time at your disposal so that you can avoid wasteful activities. Drop those activities and chores that are of no use to you immediately. You will get more time for things that are really important to you, your career and your family. Better time-management will improve your effectiveness and you would soon find that you have enough time for sports, books, and other enjoyable activities. Do not think that if you become busy, you would be making your life unhappy. Studies show that the happiest people are busy people.

Goal-setting is the first step towards effective use of time. Select a comfortable time horizon. Do not sulk when you are not able to achieve your target within a stipulated time period. Try to analyse the reasons for the delay and reallocate the time, more realistically and effectively the next time you undertake the same work.

Always think in terms of specific results. For instance, when you are planning your day's activities, do not decide that you would read a book on Economics from 6 p.m. to 8 p.m. Instead try to read a definite number of pages of the book in the two hours. Be realistic and fix your goals keeping in mind your capacity and competence.

Arrange your work. Once you have a place for every work and every work in its place, it would be easier for you to concentrate on one job at a time.

To make time-management more realistic, try a four-step strategy:

- Identify immediate targets you want to achieve.
- Select a proper strategy that will enable you to hit each target.
- Develop a plan to put the strategy into action.
- Try to split the plan into easy actionable steps.

In order to manage your time effectively, you must know yourself. Take advantage of your plus points and favourable factors and plan to overcome your shortcomings. Before planning, ask yourself a few questions: Are you a morning person or a night person; task oriented or people-oriented; an intensive worker or an extensive worker; compulsive worker or a deliberative worker?

If you are a morning person, a nine-to-five schedule is the best for you. The night person would love to work late in the evening and early night. Task-oriented people love knotty, long-term problems while the people-oriented avoid paper

work and long-term tasks. The intensive worker cannot work long hours, the extensive person is slow and steady and needs no breaks during the work. The compulsive worker wants to do everything personally and the deliberative one uses his contacts and relationships.

Another effective method of time-management is to take a small chunk of the job and do it right away. Decide quickly whether or not you can do it. If you can't do it, drop it immediately. However, do not drop everything.

Improve the quantity and quality of your work with the help of the sprinting concept. Select a few days in a row. Start early and work late at full speed. After three-four days of sprinting, return to your normal schedule. It would definitely become faster and more efficient than before. Whenever you feel that your capacity is beginning to drop, schedule a sprinting season again.

Increase your work capacity by concentrating more effectively. Adopt the four-step strategy of increasing your concentration. Prepare yourself well for the work; concentrate on a task until you reach a logical or natural break; try your mind for action by reading or discussing the basics of the project until you understand it thoroughly; keep a record of your performance at various intervals.

Have a definite deadline. If you do not meet deadlines, take steps to find out why you are unable to do so. Analyse factors that contributed to your failure. Do not let these mistakes happen again. The deadlines should be far enough to allow for effective performance. Learn to take a decision and deal with the consequences.

Here is how to use a daily plan in practice: Consult the plan before you start your task. Keep the plan on your desk or pin it on the wall in front of you. Score your performance at the end of the day. Try to make long-term plans gradually.

Some time-wasters are: boredom, too many ideas, lack of confidence, over-confidence, thoughtlessness and indecisiveness.

The best way to avoid emergencies is to plan ahead so that you can anticipate some problems and solve them in advance.

Editorial

TEST YOUR WORD POWER

The per-fect WORD. Is it on the tip of your tongue or is it hidden in the back of your mind? Either way, we agree, it's an eloquent problem.

And so each month we bring you this column, tailor made to suit your requirements. Twenty new words complete with their meanings and usage.

But what's so unique about our word power exercise? The 20 sentences are information-packed and fact-laden—facts which are often not easily available. A weighty two-in-one package, wouldn't you agree?

Tick the word or phrase you believe is **nearest in meaning** to the key word.

- binary:** A: of two-lenses B: involving a pair C: having two chambers D: lasting for two years
- caricature:** A: to represent so as to make ridiculous B: mislead C: describe D: weaken the confidence of
- dispel:** A: to clear B: get rid of C: detach D: put out of order
- emblazon:** A: to adorn richly B: give form C: preserve from decay D: raise the hopes of
- endorse:** A: to approve B: possess naturally C: make sure D: add to the value
- forlorn:** A: feeble B: helpless C: forsaken D: impossible
- fountainhead:** A: basis B: establishment C: original source D: bust
- hideous:** A: secretive B: very ugly C: foul-smelling D: disagreeable
- indignation:** A: rude treatment causing shame B: absence of interest C: anger caused by injustice D: wrongful act
- juxtapose:** A: to place side by side B: stand out from C: uncover D: enlarge
- monastery:** A: place of worship B: isolated place C: sacred tower of pyramidal form D: a place where monks live in seclusion
- morass:** A: small green plant B: state of mind C: tiny piece D: a difficult situation
- neurosis:** A: emotional imbalance B: study of nervous disease C: just punishment D: functional nervous disease
- nonchalance:** A: state of being uninformed B: recompense C: unconcern D: daring
- notch:** A: to achieve B: report C: cancel D: applaud
- propitiate:** A: to appease B: give in or submit C: put forward D: foretell
- scribe:** A: community B: letter C: writer D: manuscript
- swap:** A: to exchange B: wrap up properly C: clear up D: hit hard
- toll:** A: instrument B: value C: punishment D: a grievous or ruinous price
- tribulation:** A: grief B: place of judgment C: excited state of mind D: dilemma

(Answers on page 62)

THOUGHTS

Here's some food for thought...provided you pause to ponder over it. These passing thoughts on various social, political and economic issues, expressed by a few observant minds, often portray the bare realities of life. They may even set your thought processes in motion!

There was jubilation in the streets of Kampala when Uganda's President Milton Obote was overthrown by Gen. Idi Amin in 1971. There was jubilation again when Ugandan guerrillas drove Amin out to pave the way for Obote's return. But last month when Obote was overthrown there was no jubilation.

Hilary M. Wynne in Newsweek

The Bhagwad Gita is easier to understand than tax law. Reading, but the more you read tax laws the more difficult they become.

N.K.S. Salve in Rajya Sabha

I am a diplomat now. My challenges have now changed too. I have to divert my mountains of papers and my route is littered with hazards of

frequent cocktail parties.

Sir Edmund Hillary

In Bombay, the higher the buildings the lower is the quality of human life.

A.F.S. Tayekhan in Celebrity

A dancer has her ego—you cannot dance with a deflated ego.

Yamini Krishnamurthy in Femina

I have no personality at all—I seem to look different everyday.

Priya Tendulkar in Bombay

I am not a gentleman. I am a communist.

Ashok Mitra (Finance Minister, West Bengal) in The Illustrated Weekly of India

The Japanese have acquired global responsibilities before being psychologically and politically capable of discharging them. And Americans cannot live with the idea that a nation they defeated in war now challenges them economically.

Robert J. Samuelson in Newsweek

What the world saw after Hiroshima was a fearful vision of the future.

Time

Everything faces forward, except that the name of the city (Hiroshima) can never be mentioned without invoking a past to which everyone is attached. Hiroshima survives in the mind, which broods, denies, forgets and eventually must deal with what it saw.

Time

Few can remember the witty remarks made by Mrs Gandhi—she made so few of them.

India Today

There could, paradoxically, be no better way of keeping alive the memory of the late PM Indira Gandhi than by the various hearings and commissions established to probe the manner of her death.

India Today

We are wary of large companies—remember the British East India Co.

Rajiv Gandhi in an interview with Newsweek

.... your (Indian) PM has asked for my school to be closed down. Strange reaction from a man whose life I've just saved, risking my own.

Frank Camper in The Illustrated Weekly

QUOTABLE QUOTES

Tell me what you are busy about and I will tell you what you are.

Goethe

Happiness is belonging, not belongings.

Elizabeth Harvey

He that has a secret should not only hide it but hide that he has to hide it.

Thomas Carlyle

Success covers a multitude of blunders.

G. Bernard Shaw

Some people don't play the major role even in their own lives.

Munich Mediam

Fortune brings in some boats that are not steered.

William Shakespeare

We always like those who admire us but we don't always like those we admire.

Duc De La Rochefoucauld

Sometimes the difference between a good speaker and poor speaker is a comfortable nap.

G.A.B.

Mincing your words makes it easier if you have to eat them later.

F.P.J.

Today's stress is tomorrow's good old days.

Frankfurter

The rung of a ladder was never meant to rest upon, but only to hold a man's foot long enough to put the other somewhat higher.

Faulkner

TECHNOLOGY AND INDIA

Riding the high wave of technology India approaches the 21st century. From indigenising nuclear reactors to inducting information technology, it has traversed a remarkable distance.

Where does Indian technology stand now? An analysis.

AN OVERVIEW

Alarm bells are ringing in scientific circles, said a newspaper report recently, in the aftermath of liberalised policies on import of goods and technology. "Technology import has now come under de facto open general licence (O.G.L)," says an official of the Council of Scientific and Industrial Research (C.S.I.R.). "The technology policy statement is dead and so is the C.S.I.R."

It is not as bad as all that, but the talkable signs are there. Last year, there were 70 requests for the processes of a national laboratory. This year there have been only four—quite a comedown. A number of small factories making products licensed by one or the other of C.S.I.R. laboratories are about to close down since better products of the same kind can be imported from abroad under O.G.L. at lower prices.

A company like E.C.I.L. (Electronics Corporation of India Ltd) which makes a number of electronic products used in industry may have to go out of business, particularly out of the computer market, as better and more efficient computers can now be imported at a fraction of the price charged by E.C.I.L. and others. Then there is also the **phoren** syndrome. If Coca-Cola comes back, the bulk of the soft drink industry in the country can be wiped out in a jiffy. In fact, the foreign food industry can take over chunks of the food market in the country, just as some multinationals have nearly walked away with the baby food market.

But these are not new complaints. Businessmen have been complaining against the C.S.I.R. for years so much so that the Janata Government decided at one time to reorganise the research colossus and put it on a more commercial footing. Now the foot is on the other boot. With increasing modernisation, businessmen prefer buying new products and know-how for new products outside the country to getting stuck with local stuff. If the C.S.I.R. had built up a reputation for itself as an R & D agency delivering goods on par with those operating abroad, it would not have come to such a pass.

All these years, it has been riding high as a government body that is keener to stop the entry of technology from outside than develop and market its own. In fact, apart from half a dozen minor products and processes, the C.S.I.R. has nothing special to offer, and it has virtually no reputation outside India.

Twenty years ago, the Economic and Scientific research foundation of New Delhi said in one of its widely quoted research papers that the contribution of the C.S.I.R. that is, of indigenous technology, was worth no more than about one-hundredth or 1% of the country's national gross product. It also warned at the time that India was far behind the rest of the world in technology and would be left with junk on its hands if serious attempts at modernisation were not made.

During the past four decades of independence, India has contributed nothing worthwhile in the realm of modern technology, though its scientific institutions like I.I.T.s and C.S.I.R. laboratories have provided engineers and scientists to industry outside India. We have always had the men and the brains but never the kind of organisation that is needed to motivate them.

This is true not only of the C.S.I.R., which has come in for a great deal of flogging because it is so much in the public eye and because its scientists have been conspicuously irrelevant, but also of most other industrial organisations. Take the Tatas, or for that matter, any big business organisation. When the Tatas first put up their steel plant at Jamshedpur, it was done with the help of American engineers and designers, which is understandable considering that it was the first such plant to be built in India from scratch. But when in 1952 or thereabouts they decided to double the steel production capacity from one to two million tonnes, they went back again to the USA for new technology though admittedly, certain sections of the plant were put up with their own people. Since then there have been a couple of more attempts at modernisation, with a few more products thrown in but that, too, has been done with the help of imported know-how.

In fact, it can be said that there is not a single product—an industrial product, that is,—which is known as a distinctively Indian product, on which India has been able to build up an international reputation. We have done almost everything on the basis of imported know-how, that is, imported or borrowed ideas: whether it is Tata trucks, or I.C.I. polyester or Hindustan Lever's detergents. These are not Indian products, in the sense the automobile used to be known as an American product, or transistor radios had a worldwide reputation as Japanese products.

No technology is purely national, for technology is after all based on science and science is universal. But what is national is the technical and developmental effort that goes into it and transforms the know-how into a national product. With its vast scientific and technical force, said to be the third largest in the world, India has always been at the receiving end of technology and that is why it has suffered.

The C.S.I.R. scientists are perfectly justified in their fears, but it makes no sense to keep modern technology out of the country just to keep the 40-odd C.S.I.R. laboratories going. It is a law of nature that organisms without a properly defined function must wither away, and if that is what is going to happen to the C.S.I.R. and its laboratories, one can only say that nature is taking its course.

In fact, the head of a large business organisation which incidentally has a flourishing R & D set-up said as much recently, though he, or one of his representatives, used to sit on the governing board of the C.S.I.R.. "They very rarely discussed science or technology," he said. "All they were concerned about were the grades of malis and sweepers in some laboratory in Jorhat or Jammu, and whether so and so should be given a lump sum grant of Rs 345 or Rs 354 for buying a piece of equipment." The R & D effort in India has become so bureaucratised that its scientists are indistinguishable from babus. And when that happens and the urge to innovate dies, the organisation dies too.

COMPUTERS

Essentially, a computer is a machine that can process, store and retrieve information. Electronic computers can perform these operations with extremely high speeds which makes them a versatile tool in the hands of man. World's first electronic computer ENIAC (Electronic Numerical Integrator And Calculator) was commissioned at the University of Pennsylvania in the US in 1946. ENIAC was a collection of 18,000 vacuum tubes, 70,000 resistors, 10,000 capacitors and 6,000 switches, and occupied the space of a two-car garage. When it worked, ENIAC could perform 5,000 additions or subtractions per second; but it worked only in short bursts because its tubes kept burning out! But the miracle 'chip' has changed all that. Today even a pocket calculator can perform all the operations that ENIAC could do and much more.

There are three basic components of an electronic computer: peripheral input and output devices, memory, and the central processing unit (CPU). Probably the most important part of any computer is the CPU, which provides the computer with arithmetic, logical and control capabilities. The arithmetic unit of the CPU provides the computer with the capability to carry out the simplest of the arithmetic operations—nothing more than addition, subtraction, multiplication and division. The computer solves all mathematical problems on the basis of these four simple operations. The logical operations are very little more than the ability to compare two numbers and determine whether they are equal, and, if unequal, which one is larger.

Associated very closely with the CPU is a storage unit, often called the memory. This unit receives data, stores it and supplies the data upon command from the CPU for processing. Together the primary storage and the CPU form the heart of any computer system.

Earlier computer memories were made up of minute rings of magnetic material inter-woven with wires. They have now been replaced by silicon 'chips' which can store much more data in much smaller space. Information is stored in terms of characters, each denoted by a set of eight binary digits or 'bits'. This is necessary because the computer works on the basis of whether millions of its electronic circuits are 'on' or 'off', which are the only two states possible. A set of eight bits is called a 'byte', which is a measure of computer memory. Exactly 1,024 bytes make a kilobyte and 1,000 kilobytes make one megabyte. Today's computers generally have a working memory between 32 kilo-

bytes and 512 kilobytes.

Computer memory is of two kinds. The built-in memory which the computer uses for its own functions and is indelibly pre-programmed by the manufacturer is called the Read Only Memory (ROM). ROM cannot be modified or changed by the user. The other type of computer memory is known as Random Access Memory (RAM) which is the real usable memory of the computer. It can be erased and added to by the user and is also known as user memory. The only problem with RAM is that it is lost when power is switched off.

Additional memory storage is provided in the form of magnetic tapes and discs. Modern computers mostly use discs of two kinds: floppy and hard. The floppy discs come in two sizes—3.5 inch which can store about 900 kilobytes and 5.5 inch discs with a capacity of storing about 1,400 kilobytes of data. The hard discs which are larger can store upto 10,000 kilobytes.

Communication between the computer and the user is possible through any of the several input/output channels. The input usually consists of a keyboard similar to that of a typewriter. It can also be a tape drive, or a punched-card or tape reader. The output is usually a TV monitor which displays the information fed in or the final outcome of an operation. Modern computers can also produce graphic designs as output. The output can also be in the form of a printout or recording on magnetic tape which can be stored for later use.

Contrary to common belief, a computer cannot think like human beings; it is capable only of carrying out instructions fed into it by the user. The instructions, written in special languages which can be followed by the computer's electronic circuits, are called 'programs'. A program directs the computer to follow a series of steps to accomplish a given task. If there is any error in the program the computer cannot by itself correct it. The greatest virtue of a computer is the extremely high speed at which it can carry out programmed instructions and its capacity to unfailingly remember millions of bits of data fed into its memory. Another advantage is that computers can be linked with one another in a network and data can be quickly transferred between them. Such networks now operate in banks, airline and railway reservation systems, police and intelligence networks and in business houses. Users with computer terminals at home can draw upon the vast amount of data stored in central main-frame computer.

While the capability of computers has increased manifold since the first chips came on the market, they still lack the intelligence which characterises human beings. But scientists are now trying to

design computers endowed with some sort of artificial intelligence (AI). AI programs called expert systems are in use that give advice to oil geologists interpreting seismic data and to doctors diagnosing illnesses. Japanese computer companies have developed machines that can render a crude English translation of a Japanese technical text. But true machine intelligence is still a far way off. Even the most powerful computers of today cannot function outside their limited though vast range of stored instructions fed into them by human operators. They would be unable to cope with even a simple situation if it is not stored in their memory, or if they are not programmed to deal with it. In the words of a leading computer scientist from M.I.T., "Even the amoeba is a far smaller and far more powerful information processor than today's best chips."

BIMAN BASU

THE CHIP

At the heart of today's electronic computers is the tiny 'chip'—a marvel of the new electronic age. At its simplest, the chip is electronic circuitry, patterned on a silicon base with thousands of transistors and other components linked by "wires" etched from extremely thin films of metal. A modern chip, only a quarter inch on a side, can hold as many as a million electronic components, ten times more than the 30-ton ENIAC did.

There are only a few companies in the world which manufacture chips for microprocessors and computers. In fact, chip making is a closely guarded technology to which only a few countries have access. But the basics of chip making are well known.

The raw material for the chip is silica, the glass-like crystalline rocks found in quarries and beach sand. Even rice husk can be used to produce silica. Silicon is extracted from silica (which is the oxide) by chemical processing. After purification, silicon can be melted and shaped into long cylindrical crystals. The single crystals so obtained are then sliced into thin wafers on which chips are made. Each slice of wafer only a few centimetres across may hold several hundred chips, each containing hundreds of thousands of microscopic transistors.

The chip making process starts with giving the wafer an oxide coating by heating them in a stream of oxygen. The oxide film forms an electrically insulating layer on the wafer. The conducting circuitry is etched into the wafer through a soft photographic emulsion (photoresist) which hardens on exposure to ultraviolet light. The method is similar to photographic printing. The pattern of transistors and

other components to be etched is made in the form of a scaled down photographic negative. When the coated wafer is exposed to ultraviolet light through the negative, also called the mask, the exposed areas of the sensitive coating harden into the proper outlines. Acids and solvent are then used to strip away the unexposed areas of the coating and oxide layer, thereby baring the patterned silicon for etching.

After etching, the wafers are 'baked' in an atmosphere of gases loaded with chemical impurities called 'dopants' that form the negative and positive conducting zones. These steps are repeated several times forming many layers of transistors. Modern chips contain upto 10 such layers. Conductive pathways are generally created by depositing aluminium onto the wafer. Finally, after all the processes have been gone through, the individual chips are cut out of the wafer for mounting.

The entire process is carried out in 'clean rooms', with workers donning special suits to prevent any impurities other than those deliberately added in measured quantities from contaminating the product. Even a minute speck of dust can render several hundred transistors on the chip ineffective.

Over the years the number of components packed into a single chip has grown tremendously. The first chip in 1971 carried 2,250 transistors. Today's 'very Large-Scale integration' chips contain more than 100,000 transistors each. By 1990, electronic engineers expect to squeeze 10 million transistors into the chip!

OCEAN DEVELOPMENT

B.B.

With land resources of the world becoming scarcer due to over-exploitation by man, the oceans, which cover almost three-fourths of the earth's surface, offer the last great resource on earth. While man has exploited ocean resources like fish and other marine products for ages, systematic scientific study of the oceans is a comparatively recent development. Today's oceanographers have at their disposal a wide range of tools and techniques to study ocean currents, nutrient concentration, temperature and productivity of oceans. Besides the use of sonar for detecting fish, techniques are now available for locating deposits of off-shore oil and valuable polymetallic nodules on the sea floor. While sonar uses underwater sound waves for locating an object, other techniques available today include undersea photography using remote controlled

television cameras, satellite imagery and the use of remote controlled deep sea robots.

Oceanography, the scientific study of the oceans, has many commercial applications today. For example, the design of an off-shore oil drilling platform must take into account the conditions it is likely to face during a working lifetime, and such information comes only from oceanographic research. The study of marine geology provides information about the location and extent of deposits of sand, gravel and other marine minerals. A knowledge of ocean currents can help the fishing industry in locating areas where good catches can be expected.

Oil and natural gas are among the most valuable resources obtained from the ocean today. They occur mostly in the off-shore continental shelf areas upto a depth of 200m. The shallow off-shore shelves are also known to contain very large quantities of minerals of economic importance. Normally these areas contain sediments such as sand and mud. But in many areas, large deposits of minerals such as phosphorites occur. Deposits of coal, tin, sulphur and even gold and alluvial diamonds have been found to occur in many shelf areas which can be easily dredged up.

On the whole, however, materials taken from the sea floor are far more mundane than diamonds or gold. They are more commonly sand, gravel and limestone. Apart from their direct use in the construction industry, sand and gravel are also used in land reclamation in many countries.

In recent years a new ocean resource has caught the world's attention—that of undersea deposits of polymetallic nodules. The ocean floor, particularly that of the Pacific and Indian Oceans, is spread with potato-shaped ferro-manganese nodules. Besides large quantities of manganese and iron, the nodules contain nickel, copper, cobalt, lead, molybdenum, cadmium, vanadium, titanium and other metals. The economic potential of these elements is so enormous that even minor fractions of some of them if recovered economically recovered could meet substantial demand of industries.

The polymetallic nodules are found at depths of 3,000m to 6,000m in all oceans of the world, and cover an area of 46m sq km. The total reserves of the nodules in the world oceans has been estimated at upto 3,000b tonnes.

Several methods, based on dredging techniques, have been developed for mining the nodules from the deep ocean floor. Three methods are known to be economically important. They are: 1. Hydraulic system; 2. Air-lift system; and 3. Continuous line bucket system. In addition, dredges have bucket ladders,

and clamshells with the dredging systems.

In the hydraulic lift system, two collecting heads suck the nodules and bring them up to the mining ship. The entire system works like a giant vacuum cleaner in water. The air lift system consists of a long pipe with a 'head' to collect the nodules from the ocean floor. Air under pressure is blown into the pipe to raise the nodules to the ship. The third method is more useful because it is simple, cheaper and efficient. The system consists of a long loop of cable with buckets attached to it, at intervals of about 25 metres. The long cable moves down to the ocean floor bringing the buckets in contact with the ocean floor from where the nodules are scooped up. On their return, the nodules are dumped into the collecting ship. The main advantage of the continuous line bucket system is that it can bring the nodules to the ship without causing much disturbance at the sea bed. But whatever be the method used, mining of nodules from depths of three to six kilometres is a big operation and involves considerable technology and resources. To make the mining operation economical, it is necessary to operate in an area where the deposits have high concentration of nodules.

Two methods are commonly used for the extraction of metals from the recovered nodules. They include the low temperature hydrometallurgical method which makes use of acids, ammonia and reducing agents such as iron and sulphur dioxide. The other method, known as the high temperature pyrometallurgical method, makes use of high temperature reduction, chlorination and smelting.

Besides off-shore deposits and deep sea nodules, ocean water contains a large number of dissolved minerals which can be commercially extracted. Three of them—salt, bromine and magnesium—are extracted on large scale throughout the world. Techniques for economic extraction of other chemicals are being developed.

B.B.

NUCLEAR ENERGY

The source of nuclear energy is the nucleus of the atom, unlike chemical energy (obtained from the burning of fossil fuels and wood) which comes mainly from reactions involving exchange of electrons lying in the outermost shell of the atom. But not all atoms can produce nuclear energy; only some of the heavy atoms with unstable nuclei such as those of isotopes uranium-233, uranium-235 and plutonium-239 can do so. Energy is liberated when the nucleus of any of these atoms captures a neutron and splits into

two smaller fragments and release more neutrons. The process is called 'nuclear fission'. The massive energy released in fission comes from the slight loss of mass which occurs when the heavy atom splits into lighter atoms. The amount of energy released is given by Albert Einstein's famous equation $E=mc^2$ where E is the energy released, m the mass lost and c the velocity of light.

As each fission process releases neutrons which are capable of triggering more fission and liberate more neutrons, a chain reaction is set up. If the amount of the fissionable material is more than a critical value, the chain reaction grows very rapidly and a nuclear explosion results. But the chain reaction can be controlled, and that is what is done in a nuclear reactor. By carefully controlling the rate of the chain reaction, the energy liberated can be kept within a safe limit, just sufficient for raising steam to run a generator to produce electricity. The scientific principle is simple, but putting it into use safely requires complex, highly sophisticated engineering.

Although several designs are in use, all nuclear reactors have certain features in common. They all have a core made up of the fuel material. All except a handful of the reactors in use around the world use some moderator to slow down the speed of neutrons liberated in the fission to make them more effective fissioning agents. They also use a coolant to carry away the heat of reaction from the core to a heat exchanger where the heat can be used for raising steam. All nuclear reactors also have a control system to regulate the chain system.

For all practical purposes, designers of fission reactors have a choice of three nuclear fuels: uranium-235, plutonium-239 and uranium-233. Uranium-235 is a natural isotope, which makes up only 0.7 per cent of the uranium extracted from ore. Plutonium is a man-made element which is produced in nuclear reactors by the action of neutrons on uranium-238 which makes up more than 99 per cent of natural uranium. Uranium-233 can be produced by irradiating the element thorium-232 with neutrons. At present most power generating nuclear reactors use either slightly purified or natural uranium as fuel.

Nuclear fuel, unlike any of the fossil fuels, such as coal, oil and natural gas, must be designed and fabricated with extremely high precision. The fuel used in most reactors in use today is not metallic uranium but one of its oxides called uranium dioxide (UO_2). The black powder is compressed into very dense pellets of precise dimensions (generally about 2.5 cm long and 1.25 cm in diameter). The pellets are then packed into long tubes made of aluminium, stainless steel or an

alloy of zirconium (zircaloy). The tubes, called 'cladding', serve two purposes. They prevent contamination of the coolant by highly radioactive fission products and also lend strength to the fuel and protect it from erosion by the coolant stream. The pellet-packed tubes, called 'fuel pins', are gathered into bundles of 100 to 200 to form 'fuel elements'. Scores of such fuel elements make up the core of a nuclear reactor.

The core assembly is designed in such a way that a coolant/moderator can be circulated between the fuel assemblies. Reactors using slightly purified uranium as fuel, like India's Tarapur plant, use ordinary water as both moderator and coolant. But reactors using natural uranium need 'heavy water'—tonnes of it—as moderator and coolant. The moderator can also be a solid such as graphite; here the coolant is normally a gas, mainly carbon dioxide. The coolant is normally circulated in a closed loop through a heat exchanger which transfers the heat to water producing steam.

The control system comprises mainly of substances which can absorb neutrons easily. Metals like cadmium, hafnium, gadolinium and europium are such substances. For use in a reactor, these materials are fabricated into rods or blades that can be made to slide up and down, in and out of the core of the reactor. As they are inserted further into the core, they absorb more and more neutrons, slowing down the chain reaction. Conversely, as they are 'pulled' further and further out, the number of neutrons available for fission increases, and the reactor power level goes up. The control rods are operated by automatic systems. It is possible to shut down the reactor very rapidly in case of an emergency by quickly dropping all the control rods into the core—a process known as reactor 'scram'.

The energy output from a reactor can be measured directly as heat. Of this total heat used to generate electricity, only a fraction ultimately reappears as electrical energy; the rest is discharged to the surroundings as low-temperature heat. Generally, only some 25 to 35 per cent of the total heat output is converted into electricity in a nuclear power plant. Reactor energy outputs are accordingly described either as heat—for instance, "megawatts thermal" (MWt)—or as electricity—for instance, "megawatts electric" (MWe).

Unlike fossil fuel powered plants which use up all the fuel and produce waste products like ash, carbon dioxide, and other gases, nuclear reactors hardly use up one tenth of the fissionable material before they need refuelling. The main reason for this is a build-up of waste products in the fuel element which absorbs neutrons

from the fuel. The expected life of the reactor. Many reactors need complete shut-down before refuelling can be done. But those of the CANDU design, which use natural uranium fuel and heavy water moderator, can be refuelled while the reactor is in operation. All Indian reactors, except those at Tarapur, are based on this design.

One feature distinguishes nuclear power technology from all others; the leftovers. Unlike the ash, say, from a coal-fired power station, the used fuel from a nuclear power station cannot be just thrown away; it contains not only unspent fissionable material and plutonium but also highly radioactive waste. Plutonium and the unspent uranium-235 can be extracted from the spent fuel by chemical reprocessing and reused. But even after the extraction of these elements, the waste contains highly radioactive fission products and has to be stored in special sealed containers, away from human contact. Considerable research has been under way on safer methods of nuclear waste storage and disposal. One method involves conversion of the waste into a glassy substance which can be safely stored.

B.B.

INFORMATION TECHNOLOGY

It is generally accepted that information plays a vital role in decision-making in the management of government, industry, research or, for that matter, any organisation. Considerable time and effort has to be invested in the traditional methods of processing, storing, retrieving and disseminating information. Recent studies show that professional workers spend nearly a third of each workday looking for the information they need and possibly another 25% of the day in non-professional tasks such as making copies or delivering messages. This clearly indicates the need for advanced information technology which can reduce this time and simultaneously provide more suitable information for decision-making.

One of the results of information technology is the faster flow of information. Some of the service-oriented companies are likely to benefit more from this in terms of better planning, less time spent in handling crises, faster responses to customer queries, greater co-operation between different departments and so on. The avoidance, by means of electronic methods, of paper-handling activities will yield various other benefits. With reduction in time spent on handling information,

there will be additional 'opportunity hours'; i.e., time available to do other activities and hence there will be improvements in productivity of the organisation. It is estimated that the productivity of secretaries and professionals can be doubled or tripled through the use of electronic equipment. It is also estimated that a 15-25% improvement can be expected in management productivity.

All this sounds pretty good. But how relevant is the modern information technology for India at this point in time? One of the primary arguments against information technology is that it will lead to unemployment with machines replacing men. There is some element of truth in this but the argument is not strong enough to warrant clinging to the traditional paper-work. What is required instead is the development of applications of this technology in a way in which it does not adversely affect employment opportunities. In fact this trend has already been initiated and systems are emerging which are 'people-enhancers' in nature instead of being 'people-replacers'. Therefore, instead of outright rejection of this technology or blind application, what is required is judicious application. In this respect, as far as India is concerned, information technology is no different from the other technologies.

The second argument against introduction of modern information technology is that it results in deskilling of labour. In the West this has been one of the factors that has impeded the implementation of this technology. The users feel that the machine starts doing their work and hence they feel bored. Prof Shoshana Zuboff of Harvard Business School has explained that this feeling comes because information technology fundamentally alters the individual's relations to the task. She calls this new relationship "computer mediated". Those who work with paper and pencil usually feel "in touch" with the objects of their tasks through the activity of writing and because they are the sources of what they write. With computer mediated work, employees get feedback about the task object only as symbols through the medium of the information system. Very often, from the point of view of the worker, the object of the task seems to have disappeared "behind the screen" and into the information system. This again is a reasonable and fairly true argument. But, ways are being found to overcome this as well.

It is being emphasised that the purpose of information technology is not to develop "decision-taking" systems but instead to develop "decision-support" systems. The system should in fact take care of the routine and mechanical tasks and leave the brainwork and exercise of judg-

ment to the user. This means that the system should provide the required information quickly and thus help the decision-maker in making quicker and better (well-informed) decisions and thus make him more effective. In India where this technology is very new, the kind of applications it is likely to find in the near future are not in any way going to impinge on the rights of the user or the employee. The technology is not even being used for the routine tasks so the question of it doing decision-making work does not arise at all. The argument therefore makes more sense in the West and we can hope that by the time we reach that stage they will have found suitable answers for us.

Some critics have also pointed out that the technology does not necessarily lead to increase in productivity. This is true. We should be cautioned against assuming that once we have introduced this technology it will automatically lead to increased productivity. Its introduction has the *potential* to increase productivity and creativity. Word 'potential' is crucial and implies that the user has the responsibility of converting this potential into actual benefit. This means that installation of such systems is only the first step and should not make us complacent.

Information technology is growing rapidly in India, and is expected to expand even faster in the near future. The present target for production of electronic goods

EQUIPPED TO INFORM

Secretarial workers: Some of the technologies that can be used to support and enhance the secretarial worker include: word processing, facsimile transceivers, optical scanning, intelligent copier-printers, automated dictations systems, microform retrieval systems and electronic photo-typesetting.

Professionals: Technologies like electronic mail message systems, personal computing, distributed data processing and automated storage and retrieval systems can provide the necessary support to professionals.

Managers: In addition to the technologies that are useful for professionals, technologies such as decision-support, teleconferencing and business graphics can enhance the manager's capabilities and provide the potential for greatly improved productivity.

Some of the indigenously produced low-cost office products that are now available are pocket computers, electronic calculators, dictation machines, auto-diallers, electronic intercoms, personal copiers, electronic typewriters and spirit based addressing machines.

by 1990 is Rs 10,000 crores. It is reasonable to project that the Indian information technology business sector on its own will contribute increasingly to the wealth of the economy since it is part and parcel of the concept of modernisation being promoted by the leadership of the nation.

ARJUN SRIVASTAVA

TECHNOLOGY POLICY

Though India has had a long and distinguished tradition in science and technology from the ancient times to the earlier half of the present century, organised efforts to develop science and technology on a nationwide scale began only after independence. One of the first steps in this direction was the adoption by Parliament of the Scientific Policy Resolution in March 1958. It spelt out, for the first time, the government's resolve "to foster, promote and sustain the cultivation of science and scientific research and to encourage and initiate programmes for the training of scientific and technical personnel, on a scale adequate to fulfil the country's needs in science and education, agriculture and industry, and defence." The resolution stressed the need 'to ensure that the creative talent of men and women is encouraged and finds full scope in scientific activity and to encourage individual initiative for the acquisition and dissemination of knowledge and for the discovery of knowledge, in an atmosphere of academic freedom.' The adoption of the resolution had a far-reaching impact on the growth of science and technology in post-independent India.

One of the first steps the government took to attain the objectives spelt out in the Scientific Policy Resolution was to offer better conditions of service to scientists and associate them with the formulation of major policies. Simultaneously, research facilities were vastly expanded with the setting up of a chain of national laboratories, expansion of science departments in universities and opening of institutes of technology. An important landmark came in the early 1970s when the Fifth Five Year Plan was being formulated. For the first time the country's socio-economic development plan was integrated with a definite science and technology plan. The Science and Technology Plan (1974-79), as the Fifth Plan came to be called, was prepared by the erstwhile National Committee on Science and Technology (since superseded by the Science Advisory Committee to the Cabinet).

It was soon realised, however, that des-

(Continued on page 53)

BRIEF NOTES

The Civil Services (Mains) are round the corner.... To help you face them with confidence, here are a few information-packed analytical notes.

DE-INDUSTRIALISATION OF BRITISH INDIA

Handloom weaving was the most prominent and profitable handicraft industry in India during the pre-British period. Until the middle of the 18th century, Indian silk and cotton textiles held their own in foreign markets in spite of the imposition of heavy restrictions and prohibition on their sale in England and other European countries. In the middle of the 18th century two very important events took place: (1) the English textile industry began to develop on the basis of new and advanced technology; (2) in 1757, after the Battle of Plassey, the East India Company acquired political control over Bengal.

The process of de-industrialisation was begun by the company's use of its newly acquired political power to push its Indian trade and make it as large and as profitable as possible. The Company used its political power to dictate terms to the weavers. The result was that because weaving became un-remunerative and the weaver's profession invited for him troubles, risks and oppression, there was large-scale desertion of their professions by the weavers. The silk industry, too suffered a similar fate. The silk winders were given advances and made to work for the company; they could not work for local or private demands, nor could they get adequate returns for their work. They, too, therefore, began to desert their professions. The gradual disappearance of Indian rulers and their courts who were the main customers of town handicrafts, also gave a big blow to these industries. For instance, the production of military weapons depended entirely on the Indian states.

In 1813, the East India Company's monopoly of the Indian trade was abolished. After 1813 India had to admit British goods free or at nominal tariff rates; a policy of fresh conquests and direct occupation of protected states like Avadh was followed in order to increase the number of purchasers of British goods; modernisation especially through English education was begun to develop a taste for Western goods in more and more Indians; means of transport and communication were developed. The ruin of

Indian industries, particularly the rural artisan industries, was even more rapid once the railways were built. The railways enabled British manufacturers to reach the remotest villages of the country.

The result was that Indian handmade goods were unable to compete with the much cheaper products of British mills. The continued levy of prohibitive import duties in Britain hastened the destruction of Indian handicraft industries. India now became an economic colony of industrial England; it exported raw materials like raw cotton and raw silk which British industries needed urgently, or plantation products like indigo and tea, or foodgrains which were in short supply in Britain.

VJAY KONWAR

SWADESHI MOVEMENT

The *swadeshi* and boycott movements have their roots in the Anti-Partition agitation that started in Bengal when on Jul 20, 1905, Lord Curzon issued an order dividing the province of Bengal into two parts—eastern Bengal and Assam with a population of 31 m and the rest of Bengal with 54 m.

The Anti-Partition agitation was the work of the entire national leadership of Bengal and not of any one section. Both the moderate leaders like Surendranath Banerjee and Krishna Kumar Mitra and the militant and revolutionary nationalists cooperated with one another during the course of the agitation. Massive demonstrations were staged and resolutions were passed in which the people pledged to do their utmost to maintain the unity of Bengal.

However, soon the leaders realised that all this was not going to prove effective and more positive action should be taken to reveal the intensity of popular feelings. The answer was *swadeshi* and boycott. Mass meetings were held all over Bengal where *swadeshi* or use of Indian goods and boycott of British goods was proclaimed. Public burning of foreign cloth was organised, and shops selling foreign cloth were picketed. The movement was an immense success.

It had its impact not just in providing a

constructive channel for pent up nationalist feelings but also gave a great deal of encouragement to Indian industries. Many textile mills, soap and match factories, handloom weaving concerns, national banks and insurance companies were opened. It had several consequences in the realm of Indian culture, too. There was a flowering of nationalist poetry, prose and journalism. The patriotic songs written at that time by poets like Rabindranath Tagore (*Bande Matram*), Rajani Kant Sen and Mukunda Das are sung in Bengal even to this day. Another constructive activity undertaken was that of national education. National educational institutions for providing literary, technical and physical education were opened by nationalists who felt that the existing system of education was inadequate. On Aug 15, 1906, a National Council of Education and a National College with Aurobindo Ghose as principal were set up.

Another important aspect of the movement was the widespread support it received from women and the Muslims. The students played a leading role throughout. However, the movement did not involve the peasants of Bengal. It was confined on the whole to the towns and the upper and lower middle classes of the province.

V.K.

REVOLUTIONARY TERRORISM

It was the thinking of Tilak and Aurobindo as well as the partition of Bengal that let loose the stream of terrorist consciousness. Although Tilak spouted fire he was still for responsive cooperation. On the other hand, Aurobindo was for aggressive resistance of the Russian type. The bomb attacks in Muzaffarpur and a hide-out of terrorists in Maniktalam were the results of his belief.

In the years after 1905, the British became very cautious; public meetings were controlled and at times forbidden; the press was gagged and students were punished for defying orders. In 1907-1908, quite a few Bengali leaders and others including Aurobindo, Krishna Kumar Mitra, Ashwini Kumar Dutt, Lala Lajpat Rai, Ajit Singh and Tilak were either deported or imprisoned.

One of the strategies that was adopted by the revolutionary terrorists was assassinating unpopular officials. Secret societies for revolution were formed and several revolutionary newspapers like the *Sandhya* and the *Yugantar* in Bengal and the *Ka* in Maharashtra were being circulated.

However, stern penalties and harsh

laws broke the back of the revolutionary terrorists and the movement started petering out. This proved that individual cases of heroism could not mobilise the masses. The terrorists worked for class purposes without any common plan or Central leadership. They generally belonged to the middle class and did not have a base among the workers and the peasants. The moderates openly disowned them and the extremists were reluctant to accept them.

Terrorism appeared again towards the end of World War I. Indians abroad started mobilising support for planning a violent rebellion and formed the **Ghadar** (Rebellion) Party in 1913. They collected lot of funds and sent volunteers to foment rebellion among the Indian regiments in India and South-East Asia. The Britishers came to know of their plans and disbanded the rebellious regiments and imprisoned or hung their leaders.

Soon after Gandhiji suspended the Civil Disobedience Movement in 1922 and after the Simon Commission, the terrorists made their third appearance. Quite a few unpopular officers were killed (including some Indians) and the Governor of Bengal was shot at by a girl student. Bhagat Singh, Sukhdev and Rajguru were the more prominent leaders, who were deported in 1931. Another stalwart, Surya Sen, who escaped from Chittagong in 1932, was captured and hanged in Dacca in 1933. V.K.

DRAIN OF WEALTH

The drain of wealth from India began in Bengal in the year 1757 with the British victory at Plassey. Prior to 1757, for more than a century, European traders had been obliged to bring bullion into India, as Indian cotton and silk goods had a flourishing market in the West while Indian demand for Western products was usually negligible. The trend was reversed in 1757. Bullion began to flow out in a continuous stream, and after 1765, another form of drain was organised through the use of Bengal's revenues to purchase goods for export from Bengal.

In the first stage, plunder from Bengal and the profits made from duty-free inland trade were sent out. It has been estimated that between 1757 and 1765, nearly 6m pounds were sent to Britain. This amount did not include the trading profits of the company.

From 1765 when the company received the Diwan, the surplus revenue of Bengal was invested in purchasing the articles exported from India by the East India Company. These purchases were known as 'investments'. Thus, through investments, Bengal's revenue was sent to England. The actual drain was even more, as a large part of the salaries and other incomes of English officials and the trading

fortunes of English merchants also found their way into England.

There was a constant need for a unilateral transfer of funds to Britain and this need progressively increased over time. Before 1858, the East India Company had to bear the burden of maintaining its London establishment and paying dividends to its shareholders. This was replaced after 1858 by the costs of the Secretary of State's India Office; and the 'India Debt' in England, which was already considerable due to the company's military adventures and the expenses of suppressing the Mutiny, was sharply enhanced in 1858 when compensation to company shareholders was added to its account. These charges were called Home Charges which also included pensions to British Indian officials, and army officers, military and other stores purchased in England, costs of army training, transport and campaigns outside India but charged on Indian finances and the guaranteed interest on railways. In 1901-02, for instance, Home Charges came to £17.3m. To this official account must be added the remittances made by British officials in India and the transfer of profits made in India by British private investments.

The mechanism of the drain of wealth was as follows: British purchasers of Indian exports bought Council Bills from the Secretary of State in return for sterling (which was used to meet the Home Charges). The Council Bills were then exchanged for rupees from the Government of India's revenues, and the rupees used to buy Indian goods for export. Conversely, the British officials and businessmen in India bought sterling bills in return for their profits in rupees from British owned Exchange Banks; the London branches of these banks paid in pound for such bills with the money coming from Indian exports, purchased through the rupees obtained through the sale of Sterling Bills. V.K.

GANGA PROJECT

There is perhaps no other river in the world which holds such a central place in the lives of a people, as the river Ganga does for Hindus. From time immemorial the Ganga has symbolised the unity and continuity of a people otherwise divided by caste and regional barriers. On the banks of this holy river several activities—economic, cultural and religious—have flourished and therefore in more ways than one the Ganga represents the fountainhead of Indian civilisation.

Yet, despite all its sanctity, the Ganga is extremely polluted and though it may still purify the soul, it does not do the same to the body.

The major sources of pollution identified so far include industrial wastes,

dumping of sewage, immersion of dead bodies and the surface run-off from cultivated areas on which fertilisers and pesticides have been used. Further, the holy dip taken by millions at pilgrim centres is another contributory factor towards pollution. UP, particularly Kanpur, contributes most heavily to the pollution of the river with West Bengal following suit.

It is with this existing state of affairs that PM Rajiv Gandhi announced the formation of the Central Ganga Authority (CGA) in February with the prime objective of cleaning the Ganga and preventing further pollution of the river. A 10-member board has been set up for this purpose with the PM as its chairman and the other members consisting of the chief ministers of UP, West Bengal and Bihar, the Deputy Chairman of the Planning Commission and the ministers of state for science, technology and environment. Though the idea of cleaning the Ganga was the brainchild of the former PM, Mrs Indira Gandhi, it could not be realised by her due to her sudden death.

The Ganga, which is 2,525 kms long, begins from Gangotri in the Himalayas and flows through eight states—Himachal Pradesh, Punjab, Haryana, UP, Rajasthan, Madhya Pradesh, Bihar, West Bengal, including the Union territory of Delhi, before it merges with the Bay of Bengal at Ganga Sagar. During its course, it passes through 29 class I cities (population over 1,00,000) 22 class II cities (population between 50,000 and 1,00,000) and 48 towns having a population less than 50,000.

The cost of the five-year Ganga project which was estimated to be around Rs 250 crores, has been allocated a budget of Rs 292 crores, out of which Rs. 240 crores would be spent during the period of the Seventh Plan.

A Ganga Action Plan to co-ordinate the various activities was drawn up by the department of environment and approved by the Central Ganga Authority. It includes:

- construction of a network of sewer lines in all the towns, apart from the renovation of the existing sewage systems. Class I cities will be given first priority in all these activities as their population constitutes the majority of the people living on the river bank.
- low-cost sanitation schemes in areas near the river will be constructed to prevent human wastes from being deposited in the river.
- community cattle sheds will be set up in urban areas to prevent animal wastes from reaching the river.
- prevention of throwing of dead bodies into the river, though this being an age-old custom will be a sensitive issue to handle.

PUNJAB

AKALIS IN ACTION

The pre-poll days in Punjab passed in fearful expectancy of a terrorist attack. For disruptive forces have struck lethal blows whenever a solution to the Punjab problem has been within the Centre's grasp. The government, however, took all possible precautions to avert any such possibility this time. Apart from the massive deployment of security forces in the state, there was also considerable tightening of security measures for the poll contestants. The government also announced its decision to treat its employees on election duty on par with para military staff in relation to performance of poll duty. A compensation of Rs 1 lakh to Rs 1.25 lakh was also announced for the family of any employee who might suffer a mishap whilst on poll duty as well as employment to at least one member of the bereaved family.

However, despite these measures the terrorists did make vain bids to spread panic. On Sep 22, three people in Delhi were killed in a transistor-bomb blast similar to the ones that rocked the Capital and parts of north India in May last. And on Sep 23 a series of bomb blasts erupted across Punjab killing three people and causing extensive damage to several vehicles used for canvassing.

Electioneering was also comparatively subdued in the state this time. And although PM Rajiv Gandhi's election tours did draw the crowds, there was a marked absence of big public rallies on the whole. Candidates relied mainly on personal contacts and door-to-door campaigning. While the election manifestos of the two major contenders—the Akali Dal and the Congress (I) laid emphasis primarily on peace, prosperity and economic development, the Akali Dal made concerted efforts to portray a united, secular front: it even went to the extent of fielding six Hindu candidates.

On Sep 25 Punjab went to the polls—overtly calm but tense. But much to everyone's relief polling was mostly peaceful, unmarred by terrorist violence and unaffected by the boycott call given by Baba Joginder Singh of the United Akali Dal. The overall polling percentage averaged 55% to 60%—respectable by any poll standards.

The results did not come as a surprise. The Akali Dal emerged victorious with 73 of the 115 Assembly seats to its credit—just falling short of a two-third majority. What did come as a surprise, however, was the scale of the Akali victory. It bettered its previous best of 1977. Obviously the magnitude of the victory could not have been possible with only Sikh votes going in the Dal's favour, which goes to show that a substantial number of Hindu votes were also cast for the Dal, underscoring the people's desire for a strong, stable one-party government to a weak coalition. The Dal also managed to secure seven of the 13 Lok Sabha seats leaving the remaining six to the Congress (I). The ruling party could amass a meagre 32 Assembly seats.

However, the clean sweep by the Akalis was viewed with a certain amount of trepidation. For the Akalis have made no secret of their internal power wars. Former CM Prakash Singh Badal was expected to create bad blood during the selection of the party leader. But realising the enormous responsibility entrusted to the Dal by the people of Punjab, Badal himself proposed the name of Surjit Singh Barnala, the obvious inheritor of Longowal's moral legacy, for the party's leadership. The obvious corollary was the unanimous selection of Barnala as the new CM of Punjab.

On Sep 29, a six-member Punjab Ministry was sworn into office. Badal, for reasons best known to him, has decided to opt out of the ministry. At the moment the ministry comprises CM Barnala who is also in charge of the home, justice, vigilance, personnel and administrative reforms, cooperation, information and public relations portfolios; Finance Minister Balwant Singh who will also have the additional portfolios of excise, taxation and industries; Amrinder Singh has been allocated the portfolios of agriculture and forests, rural development and panchayats while Sukhjinder Singh gets education and cultural affairs; Basant Singh Khalsa has been given health, family welfare, social and women's welfare of scheduled castes and backward classes and finally, Major Singh Uboke has been entrusted with defence services, welfare, revenue and rehabilitation.

Barnala has promised the people a government which "everyone may regard as his own". But his initial moves as CM show distinct signs of succumbing to communal pressures. Already the detention orders of 224 people arrested under the National Security Act have been revoked. Barnala has also made it abundantly clear that his government will not go out of its way to wipe out extremism. According to him, extremists will be dealt with "politely and softly". Said Barnala, "After all they are our own people who have gone astray, and they have to be brought back." To add to this he has given his assurance that police will not be allowed to enter the Golden Temple in the future.

Such moves may well widen the communal rift between the Sikhs and non-Sikhs in the state. At this juncture, therefore, Barnala's foremost objective should be to establish his credibility.

INDIA-SRI LANKA

FIRE AND FURY

Even though the Tamil militants and the Sri Lankan army have given up any pretence of a ceasefire and are once again at war with each other in right earnest India continues to flex its diplomatic muscles in an attempt to get the warring factions back to the negotiating table. Despite the setback it suffered during the Thimpu talks, India has made renewed efforts to placate the two sides.

The External Affairs Ministry in New Delhi had wide-ranging talks with a high-level Sri Lankan team on the working paper relating to devolution of powers in Tamil areas. The Eelam National Liberation Front (ENLF) and other Tamil groups were also invited to New Delhi for consultations. PM Rajiv Gandhi himself met the Tamil militant leaders.

The efforts did not prove entirely futile. India managed to ensure an interim ceasefire from the Tamils and Sri Lankans. What it could not manage, however, was an extension of this fragile understanding between the two sides to an effective and formal ceasefire. The blatant violation of the ceasefire agreement by the trigger-happy Sri Lankan forces and the Tamil militants has created a lot of bad blood.

So, although the Tamil leaders have come out with suggestions for a lasting ceasefire no common ground for an agreement has yet been found. In fact one of the major suggestions for an external peace-keeping force for supervising the implementation of the ceasefire has been rejected outright by the Sri Lankan authorities. They are, however, planning to constitute a team of observers, solely composed of Sri Lankans belonging to the major ethnic strata and having judicial experience to monitor the ceasefire.

Meanwhile, the Tamils have also laid down certain pre-conditions for a formal ceasefire. These include disarming of home guards and civilians, non-imposition of curfew in Tamil areas, lifting of surveillance zones confining of security forces to the barracks and a settlement policy which does not alter the demographic pattern in any way.

The ENLF has also demanded expulsion of British SAS-trained mercenaries and Mossad (men of Israeli Intelligence) from Sri Lanka. It has asked the Sri Lankan Government to stop sending civilians to Pakistan for arms training. The ENLF has also sought protection for various sections of Tamils in the island nation including fishermen, shopkeepers and plantation workers as also guarantees against burning, looting, abduction and rape in Tamil areas.

The Sri Lankan Government at the moment has adopted an aggressive stance too and is not willing to concede an inch. So in spite of the declaration of a temporary ceasefire—an extension of the 12 week truce—both sides are still indulging in violence.

Across the Palk Straits, the Tamil Nadu state government along with various political parties organised a state bandh on Sep 24 to protest against the atrocities on Sri Lankan Tamils. This is the second organised bandh (the first was organised on Aug 2, 1983). Mass fasts and bandhs were organised by the ruling AIADMK. The Union territory of Pondicherry also observed a 12 hour bandh.

On the same day, unfortunately, the Tamils in Sri Lanka, in a major ceasefire violation, launched a massive attack on a police station in north Sri Lanka. But, as Sri Lankan Security Minister Leith Athulathmudali put it rather optimistically—"Success comes only after a number of failures. The important thing is not to give up."

NEW CABINET CHANGE FOR THE BETTER?

A Cabinet reshuffle had been on the cards for quite some time. Yet when it finally took place on Sep 26, everyone was taken by surprise particularly the ministers involved. The large-scale inductions, expunctions, promotions and demotions are, however, by no means haphazard. They have been carefully planned and executed with clinical precision.

Not only has the reshuffle brought in several new faces and transferred old faces to new places, it has changed the basic structure of the PM's Cabinet considerably. While reducing the importance of Cabinet ministers substantially, it simultaneously bestows additional powers on the ministers of state who will henceforth have specific responsibilities. The hitherto two-tier council of ministers has now acquired

a third tier with the induction of three deputy ministers. And, in keeping with his youthful image, the PM has transfused young blood into the Cabinet. Young, dynamic persons have been placed in key positions from where they can run the affairs of the state without undue interference by senior members. Finally, not only has there been a reshuffle of ministers but a restructuring of ministries too. Where earlier there were 31 ministries there are now only 27, of which three are looking after new portfolios—Programme Implementation, Transport and Water Resources. And, with due consideration to the importance of ministries, departments have been increased, reduced or merged accordingly. Then, the institution of parliamentary secretaries in the PM's Cabinet has been completely abolished.

Altogether 16 new ministers have been inducted which include three new Cabinet ministers, while six ministers have been ousted. These include C.S. Singh (textiles), Margatham Chandrasekhar (women and social welfare), Bir Sen (environment and forest), Ashok Gehlot (tourism

ANALYSING THE CHANGES

BY C.P. BHAMBRI Dean, School of Social Sciences, JNU

The Council of Ministers of the Union Government was reshuffled on Sep 25, 1985, following which 15 new persons were included and six ministers of PM Rajiv Gandhi's team dropped. The Constitution of India provides for a parliamentary form of government in which the PM is the head of a Council of Ministers. It is on his recommendation that the President of India appoints ministers and allocates their specific responsibilities. According to parliamentary theory, the PM, as the leader of the majority party, has full powers to constitute his Council of Ministers, but in actual practice, every PM has to accommodate important political groups and regional leaders in his Council. Many a time a Cabinet reshuffle means simple reorganisation of work among the ministers. At times, however, a Cabinet reshuffle may take the form of a surgical operation. During the primiership of Pt Jawaharlal Nehru, important ministers from his Cabinet were dropped under the well known "Kamraj Plan". It was an important political operation carried out by Pt Nehru on the basis of political considerations. Similarly, the late Mrs Gandhi reshuffled her Cabinet in 1969 when she was involved in a political struggle with the Congress Party. The party split in 1969 because the reshuffle was based on a power struggle within the party. Thus a Cabinet reshuffle may result in trivial reorganisation of work or it may even have political significance. The PM may ask a minister to resign if he is not satisfied with his performance; or he may shift a minister and allot to him ministerial work of a politically sensitive nature, on the basis of which meanings are drawn as to whether a person has been promoted or demoted in the process of the reshuffle. While the selection of his team and allocation of work is a prerogative of the PM, many political considerations play a role in the constitution or reconstitution of the Council of Ministers. In the specific Indian context, the Council of Ministers should have caste, community and regional representation, and any imbalance is to be corrected by inducting new ministers to replace some of the old ones.

The recent Cabinet reshuffle has to be interpreted in terms of its political and administrative significance. Its political significance does not lie in the dropping of the six ministers from the Council for all of them were political light weights. The political significance of this reshuffle lies in (a) the induction of A.B.A. Ghani Khan Choudhury who was brought back from political wilderness; (b) appointments of Arun Nehru and Arun Singh in extremely crucial ministries and (c) the shifting of P.V. Narasimha Rao from the Ministry of Defence to the newly created Ministry of Human Resources Development.

Ghani Khan Choudhury is an important factional leader in the West Bengal Congress. Perhaps the PM felt that in the West Bengal Congress party, Chowdhury's faction deserved a special place. Arun Nehru and Arun Singh are very close to the PM and by shifting Nehru from the Ministry of Power to the Home Ministry and by appointing Arun Singh, formerly Parliamentary Secretary to the PM, as Minister of State for Defence, Research and Development Organisation, the PM has reposed faith for these crucial ministries on his very close associates.

During the last few years, the internal law and order situation in India has deteriorated and the country has witnessed large-scale violence in Assam, Punjab, Gujarat and Maharashtra and caste and communal violence has been spreading in various parts of the country. The new Minister of State for Home, Arun Nehru has been appointed to perform

a very crucial role in the context of growing lawlessness in the country. Further, the problem of law and order is politically a very sensitive issue and any political misjudgment can lead to disaster.

India's internal security is deteriorating and the US-Pak military aid programme is creating serious problems for our defence preparedness. This is one reason why the PM has brought in Arun Singh, a personal friend, as Minister of State for Defence, Research and Development Organisation. For the last two decades, India has concentrated on indigenous defence production because during the Indo-Pak war, 1965, the US refused to give India the spare parts for its defence equipment. This had an impact on the Indian policy-makers and a serious effort was made to undertake defence research and development programmes.

B.R. Bhagat has been brought into the Cabinet as Minister for External and he will be assisted by K.R. Narayanan, an erstwhile diplomat, who will be the Minister of State in this ministry. In the previous years, many a time the PM has himself handled India's foreign affairs and at times separate Cabinet ministers like Y.B. Chavan, Swaran Singh and Dinesh Singh have handled this vital portfolio.

India is the chairperson of the non-aligned movement and we believe in an activist foreign policy of non-alignment and world peace. This requires political leadership and only an independent Cabinet minister can provide such a leadership to the Ministry of External Affairs.

The reshuffle can also be viewed from the administrative angle. If a government wants to focus its special attention on some specific programmes of development, it either creates a new ministry or reorganises and restructures the old ones. In this reshuffle, ministerial departments of urban development and rural development have been established. In the changing context of India's socio-economic development, urban and rural development require special attention. The creation of a separate department for urban development and rural development shows that the new government knows that the totality of problems of urban and rural development can be tackled in a comprehensive manner only if separate ministers deal with them independently. Similarly, the creation of a new Ministry of Human Resources Development with Education, Culture, Youth Affairs, Sports and Women is a recognition of the fact that development of the vast human resources of India needs special attention.

The new government is also concerned about the administrative bottlenecks in the country's economic development—especially the inefficient functioning of the infrastructure and the public sector enterprises. Ghani Khan Choudhury has been appointed as Minister for Programme Implementation and all aspects of transport have been brought under a new Ministry of Transport. A Cabinet minister has also been appointed to deal with Water Resources. Thus creation of new ministries of Transport, Water Resources and Programme Implementation shows that the Government of India attaches great significance to the speedy economic development of the country. Hence the reshuffle of the Council of Ministers is apparently efficiency-oriented and result-oriented.

In a nutshell the Cabinet reshuffle has two basic goals—(a) to provide political weight to the Ministry of Home, Defence and External Affairs, and (b) add administrative strength to the Ministry of Economic Affairs. However, the future will reveal the results of this political exercise.

The New Cabinet

Following is the list of ministers in the new Cabinet with their respective portfolios.

PM Rajiv Gandhi
Defence Science and Technology, Planning, Personnel and Administrative Reforms, Environment and Forests

Cabinet Ministers

Buta Singh
Agricultural and Rural Development
Vasant Sathe
*B.R. Bhagat
V.P. Singh
Mohsina Kidwai
S.B. Chavan
P.V. Narasimha Rao
*N.D. Tiwari
Asoke Sen
H.K.L. Bhagat
A.B.A. Ghani
Khan Choudhary
K.C. Pant
Bansi Lal

Abdul Ghafoor

B. Shankaranand

V.N. Gadgil

Khursheed Alam Khan
R.N. Mirdha
K.P. Singh Deo

T. Anjiah
Nawal Kishore Sharma
*Rajendra Kumari Bajpai

Yogendra Makwana
Natwar Singh
C.L. Chandrakar
Arif Mohammad Khan
K.R. Narayanan
Janardhan Poojary

Arun Nehru

P.A. Sangma

*Sushile Rohatgi

R.K. Jaichandra Singh

Urban Development
Water Resources

Ministers of State (Independent charge)

Information and Broadcasting
Commerce
Communications
Food and Civil Supplies
Labour
Petroleum
Welfare

Ministers of State

Agriculture
Fertilisers
Rural Development
Power
External Affairs
Banking and Insurance
Internal Security
Police, Rehabilitation, Law and Order
States and Union territories
Education and Culture
Chemicals

*M. Arunachalam
H.R. Bhardwaj
Ghulam Nabi Azad

*Sitaram Kesri

Ram Dulari Sinhe
Meghavrao Scindia
*Rajesh Pilot
*Jagdish Tytler
Dalbir Singh

*Sukh Ram

Arun Singh

Shivraj Patil

*Ajit Panja
Z.R. Ansari

*S Krishna Kumar

*P. Chidambaram

*G. Gomango

(*New inductions)

Industries
Law and Justice
Parliamentary Affairs (Rajya Sabha)

Railways
Surface Transport
Civil Aviation
Urban Development
Defence, Production and Defence Supplies
Defence Research and Development Organisation
Personnel and Administrative Reforms
Planning
Environment and Forests

Deputy Ministers

Family Welfare
Commerce
Welfare

and civil aviation)—all of whom are ministers of state—and two Cabinet ministers—Veerendra Patil (industry) and Rao Birendra Singh (food and civil supplies). The shake-up of the Cabinet is a clear indicator of the PM's intention: he wants a well-knit and well co-ordinated team of result-oriented, dynamic men at the helm to steer the country on the path of progress.

The Cabinet reshuffle has also been responsible for the acquisition of a new CM by UP. The former CM N.D. Tiwari had, a year earlier, given

up his Cabinet position as Minister of Industry, to take up the reins of administration of the most populous state in the country. And, only two days prior to the reshuffle, he tendered his resignation from the post of CM. Obviously the Cabinet needs his undoubted political acumen far more than does UP. And PM Rajiv Gandhi's visit to the flood affected areas in UP a week earlier was intended to serve more than one purpose. Not that UP was allowed to suffer because of Tiwari's exit. In a smooth transition Vir Bahadur Singh, a known hardliner in the Tiwari Ministry, was unanimously sworn in as the new CM of UP. Singh has the reputation of being a no-nonsense man-of-action and may well prove to be a change for the better.

Some Restructured Ministries

Ministry	Then	Now
Home	Law & Order, Centre-State Relations, UTs, Official Language	Law & Order, Centre-State Relations, UTs, Official Language, Newspapers and Printing Press, Internal Security, IPS
Industry	Heavy Industry, Company Affairs, Industrial Development, DGTD	Company Affairs, Industrial Development, DGTD, Chemicals, Petro-chemicals, Bureau of Public Entrepreneurs
Information & Broadcasting	Radio, TV, DAVP Registrar of Newspapers, Film Censorship Newspapers & Printing Press	Radio TV, DAVP, Registrar of Newspapers
Commerce Education	Commerce Education	Commerce, Textiles, Supply Film Censorship, Education, Sports, Arts & Culture, Youth Affairs (called Human Resources and Development)
Railways	Railways	Railways, Civil Aviation, Surface Transport (called Transport Ministry now)
Agriculture	Agriculture, Cooperation, Agricultural Research	Agriculture, Cooperation, Agricultural Research, Fertilisers, Rural Development

ASSAM

AFTER THE ACCORD

In the wake of the memorandum of understanding signed between the Centre and the Assam agitators, the government has decided to drop disciplinary action against Central Government employees who had participated in the Assam agitation, barring those involved in serious incidents of violence. Guidelines on the approach to these employees have already been issued by the Ministry of Personnel and Administrative Reforms.

According to these, the period of absence of various categories of employees due to their participation in the agitation will be regularised. In case of employees who were merely passive participants, the period of absence will be adjusted against leave. However break in service of active participants will also be regularised. This will prove particularly beneficial for employees, especially in the railways, who had retired but were not being given retirement benefits owing to forfeiture of past services.

The Government has also decided to take back temporary employees who had been discharged for participation in the agitation, provided the posts vacated by them are still open and they have not been involved in any violent act. Those already penalised will also be given an opportunity to file appeals and review petitions.

The Election Commission, in the meantime, is facing an uphill task in Assam. When the Assam accord was signed, the EC had practically completed the intensive revision of electoral rolls on the basis of Mar 25, 1971 as the cut-off year. In fact, the final rolls for 62 of the 126 constituencies had even been published. With the announcement of Jan 1

1988 as the new cut-off year, the EC will have to partly repeat the tedious exercise of roll revision. And before the publication of the final electoral rolls in the state, the EC will have to dispose of over 12 lakh claims and objections. For this it has already appointed 10 central observers and 13 additional chief electoral officers.

The EC, however, hopes to finalise the electoral rolls by November. Which means elections will, in all probability be held in December. Meanwhile, widespread bandhs and protest demonstrations in the minority areas of the state clearly indicate that the accord has antagonised the minorities. In any case, the Congress (I) will not be hot favourites in the election fray. The tussle will be centred around the Assam agitation leaders, still riding high in the aftermath of the accord, and the CPM and other political parties which are opposing the accord.

INDIA-BHUTAN

REAFFIRMATION OF GOODWILL

PM Rajiv Gandhi's three-day visit to Bhutan, the land of the thunder dragon or Druk Yul, starting Sep 29, further strengthened the bond of friendship which exists between the two neighbouring countries. The visit was, however, not merely an official one. A deep personal note ran through it. For Bhutan's royal family enjoys close personal ties with the Nehru clan—since way back in 1958 when former PM Jawaharlal Nehru visited the country. The late PM Indira Gandhi too visited Bhutan twice—in 1968 and 1972.

Apart from this India has also played the role of Bhutan's vital economic prop for the past 27 years. Not only has it financed most of Bhutan's development programmes and Five Year Plans but it is also its largest development and trade partner. In fact, its assistance amounts to a sizeable 50% of the country's Fifth Plan anticipated expenditure during 1981-87. However, as Rajiv Gandhi was quick to point out, this assistance has no political strings attached. "Rather, we consider it a sharing of resources for common benefit," he said.

As of now, India plans to finance the improvement of electricity distribution systems in Thimpu and Paro and also the construction of mini hydel projects at Gyetsa and Khaling in eastern Bhutan. Currently India is engaged in helping Bhutan set up its broadcasting station.

During his stay at Thimpu Rajiv Gandhi addressed a special session of the Bhutan National Assembly, *Thetschogdu*. Summing up his visit on his return he said: "The visit went off well. We exchanged views and as a result of the visit, the Bhutan—India friendship is further strengthened." But perhaps the most accurate summation of Indo-Bhutanese relations was made by Bhutan's Foreign Minister Lyangpo Dawa Tshering who remarked: "On various international issues we do not see eye to eye with India but the differences should be accepted as between two neighbours enjoying mutual respect."

SEVENTH PLAN

PRIORITIES ON PAPER

The Planning Commission has approved the Seventh Plan draft. The finalised Plan document envisages a total public sector outlay of Rs 1,80,000 crores. This marks an increase of nearly 64% over the actual outlay of Rs 1,10,000 crores during the Sixth Plan. Although the approach paper of the Seventh Plan approved by the National Development Council envisaged a total Plan-outlay of Rs 3,20,000 crores inclusive of the Rs 1,80,000 crore public sector outlay, a serious resource crunch has forced the commission to reduce the share of public sector outlay from 80% in the Sixth Plan to 55% in the Seventh. The share of the private sector has registered a corresponding increase from 20% to 45%. There is an assumption that the pricing policy of the public sector will have to be revised in an attempt to raise the income of the public sector units.

The hallmark of the Plan, however, is the investment in modernisation and updating of technology in all sectors. Higher allocations have been made for infrastructural sectors like power, coal, petroleum and railways. Adequate provision has been made for agriculture, rural development, and irrigation too. Emphasis has also been laid on improving dry land farming and rice cultivation in the eastern region in an attempt to attain regional balance in the agricultural sector. The Plan document also lays greater stress on human resources development in areas of social welfare, education and youth services (including sports), health and family welfare. Special attention has been given to socio-economic programmes for women.

The Plan projects an annual growth rate of 5%. The annual growth rate for exports is an estimated 6.8% while that for imports 5.8%. Quite

hearteningly the Plan is expected to generate additional employment opportunities to the tune of 40m man years but at the end of the Plan period there would still be a backlog of nine million man years. The agricultural strategy has been changed accordingly to step up employment in the rural sector. The IRDP and anti-poverty programmes will also be strengthened while construction activities will be given a boost in the urban sector to generate more employment opportunities. According to the Plan document, the poverty line will decline from the present 37% of the population to 26% in 1989-90 in terms of the revised poverty line of Rs 6,400 per year for a family of five members.

Level of deficit financing will, according to the draft Seventh Plan, be maintained at Rs 13,000 crores for the five-year period. However, since the 1985-86 budget envisages a deficit of over Rs 5,000 crores, deficit financing will not be able to raise more than Rs 8,000 crores during the next four years. The level of external assistance is envisaged at Rs 20,000 crores. And although over the next two years no serious balance of payment problem is expected despite repayments to the IMF, there may be problems of balance of payment later on for which the document suggests limiting of oil imports and stepping up of exports substantially.

The finalised plan document will now be placed before the Union Cabinet for approval after which the National Development Council will place its final seal of approval.

RBI REPORT

NOTE OF CAUTION

The Reserve Bank of India (RBI) in its annual report for 1984-85, presents a happy picture of the Indian economy. On the eve of the Seventh Plan the economic scenario is very encouraging. The level of foodgrains stocks has touched an unprecedented 29m tonnes with the public distribution system. The level of foreign exchange reserves is also reasonably comfortable. Both these factors are vital for the restoration and sustenance of price stability.

The recent relaxations in industrial licensing and imports and fiscal reforms together with a sustained buoyancy in the capital market is designed to catalyse investments in the economy. Also, according to the report there was a noticeable improvement in the price situation dur-

(Continued on page 54)

Sunny Star

Blazing on the trail of Daimler-Benz's two world record setting 'economobile' cars, which in 1980 stunned the world by giving over 1,200 km per litre, is another Benz trendsetter: Solar-powered 'Silver Arrow'.

The car was flashed out in all its sparkling finery during the Tour de Sol: the Swiss car rally for solar-powered vehicles. The Benz marvel on wheels was surely the star of the show. In cooperation with Alpha Real AG, the Zurich company responsible for the power unit, Benz technicians managed to put the car on its road to fame, in just five months.

At Tour de Sol the car displayed an amazing performance - its 432 solar cells pump out 480 watts of power propelling the car to a maximum speed of 71 km per hr. 'Silver Arrow' streaked away with all praises and won the competition - naturally one might say!

MEXICO

FATAL ROCKS

In one of the worst natural disasters in this century, Mexico was rocked by a series of earthquakes that left more than 10,000 dead, according to American sources. The first quake hit Central Mexico on Sep 19, devastating Mexico City. According to the Mexican Red Cross, at least 760 persons were killed, 868 were still missing on the second day and 4,642 were injured. But unconfirmed newspaper reports spoke of 3,000 dead in Mexico City and an additional 300 in the Pacific coastal states, 321 km southwest of the capital. The quake measured 7.8 on the Richter scale and left an 8,00,000 square km arc of destruction from coast to coast. The US Geological Survey in Golden, Colorado put the epicentre in the Pacific, 400 km southwest of Mexico City.

People were still stunned by the after effects of the first quake when the second quake, followed by a third quake wrought havoc through Mexico City over the next two days. The third tremor was one of a string of alter shocks but even this measured 4.5 on the Richter scale. The second quake killed over 4,000 people as buildings left tottering by the first quake collapsed and gas mains caught fire. The buildings included schools, office blocks, residential buildings and worse still, hospitals, which were nursing survivors of the earlier quake. Aeroplanes were not allowed to fly over Mexico City because it was feared that vibrations may cause more buildings to collapse.

Meanwhile, the international community rushed to Mexico's help with medicines, food, rescue workers and other kinds of help. This quake was the strongest in the world since the one that had hit Chile last March when 177 people were killed. The worst earthquake in modern times, however, occurred in China in 1976. China said at the time that 2,42,000 people had died, but other estimates put the toll around 7,50,000.

BRITAIN RIOTS

IN BLACK AND WHITE

The worst urban riot in Britain since the Brixton and Toxteth riots of 1981, broke out in mid-September in the Handsworth section of Birmingham, the second largest city in Britain. Trouble began when a white traffic policeman stopped a black man suspected of driving a stolen car. A hostile mob of black youth gathered and soon a fight began between the blacks and the police which spread to looting and arson for two consecutive nights which left two men dead and 200 arrested. Most of the victims of the riot were Asians and some 50 of their shops were gutted. Although residents of the area blamed frustration stemming from unemployment and hopelessness as the major cause of the riot, the British authorities had little patience for sociological explanations and said that it was "a celebration of lawlessness, pure and simple".

However, Handsworth happens to be a traffic ghetto, where poor people of West Indian, Indian and Pakistani origin live. The small shops in the area are owned almost exclusively by the Pakistanis and the blacks are customers not employees of these family businesses. Their resentment is also directed towards the police: quite a few of the young blacks are Rastafaris, a cult which believes in returning to an ideal Africa but which also uses marijuana and its derivatives as mystical sacraments. Drug abuse and drug peddling are major problems in the area. Unemployment stems from the fact that Birmingham, which used to live by making cars, has fallen on hard times. Between 1978 and 1984 it lost one-third of its manufacturing jobs. Of the 16-year-olds who left the schools serving the area in 1984, 18% of the whites, 16% of the Asians and only 5% of the blacks had found jobs by November.

Though the opposition labour Party wanted a full-scale judicial inquiry into the riots, the government was content to leave investigations to the police. Meanwhile, Handsworth slowly limped back to normal. The local businessmen organised a traders' association and decided to ask for a larger police presence in the area and to seek \$26m in compensation from the government.

Later in the month, trouble broke out again, this time in Brixton, South London, which had been badly affected in the ethnic riots of 1981. The trouble began when the police shot and badly injured an innocent person, Sherry Grace, in her own house. They had entered the house on

the pretext of looking for her teenage son regarding an earlier criminal incident. As news of the affair spread, Afro-Caribbean youth rioted and at least 53 people were injured, among them 16 policemen and two firemen.

ISRAELI RAID

TARGET ARAFAT

In a dramatic 2,500 km air raid operation, eight Israeli F-16 war planes bombed the headquarters of the Palestinian Liberation Organisation (PLO) at Hammam beach near the capital, Tunis. The attack led to the killing of 156 people and severely damaged the PLO administrative and residential buildings. PLO Chairman Yasser Arafat, who was returning from Rabat after a meeting with King Hasan of Morocco, escaped miraculously. Arafat, while returning to Hammam beach had stopped at Marsa to confer with the deputy general commander of Palestine revolution forces there, and in the process evaded the bomb attack.

The Israeli Government claimed responsibility for the attack stating that it was in retaliation for the killing of three Israeli hostages in Larnaca, Cyprus on Sep 25. The Israelis allege that the murder of the three hostages was engineered by members of 'Force 17', an elite PLO group under the special control of Arafat. Although some PLO members claimed responsibility for the killings of the three Israelis believed to be spies, the PLO has denied any involvement in the incident. This is the second Israeli operation of this kind—the earlier instance being in 1978 when Israeli commandoes flew to Entebbe airport, Uganda to rescue hijack hostages.

The response of the international community, except the US, to the Israeli attack has been one of strong condemnation. Egypt, in an act of protest suspended its talks with Israel over a border dispute. Members of the non-aligned countries called for an emergency session of the UN Security Council to impose UN sanctions against Israel. Foreign ministers of the 10-member European Economic Community (EEC) also severely denounced the bombing. The US was the sole defender of the Israeli action, calling it a "legitimate response to terrorism".

The Israeli air raid has been widely interpreted as yet another attempt to destroy the consolidation achieved by the PLO under the leadership of Arafat. The PLO, after being forced out of Beirut in June 1982 by Israeli troops, had been ridden with intense factional troubles. Further, the long-term intent of such an attack may be to disrupt the Jordan-PLO peace initiative worked out earlier in February at Amman between the two parties, regarding the setting up of a Palestinian state.

LEBANON

BLACKMAILING USSR?

In a bid to force an end to the attack of the northern city of Tripoli by pro-Syrian militias, the Islamic Jihad militants, a Shia Muslim fundamentalist group abducted four Soviet nationals—three diplomats and an embassy physician and threatened to kill them if the fighting in the city of Tripoli was not halted. To show that they meant business, the Islamic Jihad militants, two days after the kidnapping, executed the Soviet cultural attache Arkady Katkov and deposited his body near Beirut's shelled sports stadium. Shortly after the body was found, an anonymous caller claiming to belong to the Islamic Jihad group stated that a second hostage had also been killed. However, this report is yet to be confirmed. To present another twist to the already tense situation, another caller warned that the Soviet embassy would be blown up within 48 hours. The Soviets being in no mood to take any more chances, evacuated 120 occupants, mostly women and children, though the threatened attack never came about.

Though the fate of the remaining American and Soviet hostages still hangs in a balance, the ceasefire recently enforced in Tripoli is still holding. It is speculated that the recent incidents in Lebanon will signify definite shifts in Soviet policies in the Middle East. The Islamic Jihad organisation responsible for the above activities is an offshoot of the Iranian extremist group—Hezbollah. Syria, which is a close ally of the Soviet Union maintains diplomatic ties with Iran and one can only wonder what the next acts hold in the continuing tragedy of Lebanon.

Meanwhile, in retaliation against the Israeli raid on the Palestine Liberation Organisation headquarters in Tunisia, the same militant group, Islamic

Jihad murdered an American diplomat, William Buckley, missing from Beirut since March 1984. Although five other Americans and eight Europeans are also being held hostage by Islamic Jihad militants, this is the first time that an American hostage has been executed in Lebanon.

ISRAEL-IRAN

FLYING FOR TROUBLE

In mid-September, a DC-8 cargo plane apparently owned by an American cargo company called International Airlines which says it sold the aircraft to an unnamed Nigerian firm in August, strayed over Turkey en route to Spain from the Iranian town of Tabriz. It was later reported to have landed at Tel Aviv although the Israelis denied that it had done so. To deepen the mystery, Tel Aviv announced that it had landed, but for "repairs to its radar antennae" and had departed after three days.

Political analysts have been chewing over the mystery as to what the cargo aircraft was doing in Iran. The idea of an Israeli-Iranian connection is not new. During the days of the Shah, Tel Aviv found it profitable to hawk weapons in Teheran, but this apparently continued even after the Ayatollah took over power. In 1981, the Soviet news agency Tass reported that an Argentine aircraft had been sighted over Soviet Armenia while flying between Teheran and Cyprus. It was suggested that many planes flying Israeli arms into Iran had been regularly using a loop-hole in the Russians' radar system to do so. Although Israel has never acknowledged it, many sources feel that Israel has been supplying arms to Iran during the last five years of the Iran-Iraq war. Some senior Israeli officials have hinted that it is in Israel's interest to keep the warring parties busy. Fundamentalists in Iran find itself obliged to fight Arab rather than Jewish enemies, and thus keeps Iraq distracted from anti-Israeli ideas. The war has also split Iraq and Syria, lessening the danger of an 'eastern' front against Israel.

In 1984, President Reagan began to follow the policy of a rapprochement with Iraq and asked Israel to stop the flow of arms to Iran. While some senior Israelis agree that fundamentalism in Iran may become a problem for Israel in the long run, the right-wing Likud is in favour of keeping Israel's enemies fighting each other. If the DC-8 had actually been carrying arms to Iran with Israeli help, it would mean that the right-wing view still prevails in the ruling circles.

SOUTH AFRICA

BAN ON US AID

Two major developments occurred on the South African front in September. President Reagan, in a major foreign policy shift, announced that he was imposing a series of sanctions against South Africa through executive order. By these sanctions, among other things, Americans in both the US and abroad would be banned from granting new loans to South African government agencies except those in the area of housing, education and health care. Further, the export of most nuclear technologies and materials to South Africa and computer sales to South African agencies that administer apartheid policies would be prohibited. President Reagan issued this statement under mounting pressure from the US Congress, which has a pending sanctions bill, which the President wished to veto because his Administration has so far rejected legislated economic sanctions against South Africa. His veto would almost certainly have been overridden by the Congress. He, therefore, listened to his aides who advised him to accept most of the tenets of the pending legislation and then speak out against apartheid and thus regain the initiative.

The announcement of the American sanction was followed by similar announcements by Canada and the members of the ten-nation European Community, except Britain. Pressured by such measures from overseas and by the unrest at home which has led to the loss of over 700 lives in one year, President Botha told a provincial congress of his ruling National Party that henceforth blacks who live in the urban areas but are nominal citizens of the four "independent" homelands in South Africa, would be granted citizenship. One day later, a presidential commission recommended to Botha the scrapping of "influx control" regulations, or pass laws, by which the movement of blacks has been controlled since 1952. The commission recommended the abolition of the pass book system and the issuance of the same identity document to all South Africans regardless of race.

If the South African Parliament makes these recommendations into law, blacks would gain the right to live and work in any part of the country and to have their families with them instead of in distant homelands. As to Botha's announcement, if he follows through it would mean the

end of the Verwoerdian plan to create ten black homelands for the blacks, which would leave 87% of the country in the hands of the whites. Botha also said that the 5m people who live inside the independent homelands would be given dual citizenship, while the 4m people who live in the black townships of white South Africa would be permitted to regain their South African citizenships.

However, blacks will still lack political power despite the apparent cracks in apartheid. They will still not have the right to vote or have their own separate "parliament" like the two chambers created last year for the minority coloured (mixed) race and the Indian community.

KAMPUCHEA

POT IN A SOUP?

The Khmer Rouge faction of the Kampuchean coalition government in exile announced in mid-September that Pol Pot, the commander who was responsible for the death of over 1m people in Cambodia between 1975 and 1978 was resigning. The communique said that he would step down as Commander-in-Chief under a new rule that sets 60 as the retirement age for military and civilian officials. Pol Pot would be replaced by his second-in-command, Son Sen, who has a more acceptable international reputation.

While China, which backs the Khmer Rouge, hailed the shift as 'conducive to unity among the Cambodian people,' others were more sceptical. Many felt that Pol Pot was retiring only in name, but would continue to be their leader. Yet other analysts felt that it was a strategic move: by giving the appearance that Pol Pot had retired, the Khmer Rouge hoped to influence the Third World to increase its pressure on Vietnam to withdraw from Cambodia, which it has occupied since 1978.

There were surprise developments on yet another front. For the first time since the Paris Peace Accord was signed by Vietnam and the US in 1973, Hanoi has changed its policy towards Washington. The US had pledged in 1973 to contribute to the healing of the wounds caused by its war against Vietnam and the latter had promised to search for American servicemen missing in action (MIA). In 1977, Hanoi had dropped the linkage between normalisation, required before the US could pay reparation, and the MIA question. But after talks held recently between the two countries, Hanoi gave Washington an apparently unconditional pledge to complete the search for MIAs within two years through its own efforts. The US, which had so far regarded the MIA question as a purely humanitarian issue, has begun to relate it to clearing the way for the possible establishment of diplomatic relations with Vietnam. What is important, an atmosphere of co-operation has been established between the two countries.

NAM MEET

ACTION AGAINST APARTHEID

At the eighth meeting of ministers from non-aligned countries held at Luanda, it was decided that Zimbabwe would be the next leader of the non-aligned movement, succeeding India, for the period 1986-89. Zimbabwe, therefore, was chosen as the venue for the next summit, ahead of bids by Yugoslavia and Indonesia.

The principal statement of the ministerial conference was: the 'Luanda Special Communique on South Africa' which called on the UN Security Council to impose comprehensive and mandatory sanctions against South Africa and urged South Africa's principal trading partners—West Europe, Japan and the US—to cooperate and "assist the process of genuine change which may still be achieved without major bloodshed". The choice of Luanda is itself significant in this context. In his opening address, President Jose Eduardo dos Santos of Angola said this was "an act of moral solidarity" against South Africa, Luanda being on the doorstep of the apartheid regime. The statement was supported by all the 119 delegations present.

Various other issues were also discussed, among them Kampuchea and the Iran-Iraq conflict. On the first, the delegates upheld the 'empty seat' principle, established at New Delhi. While warning that there was real danger of the tensions escalating in the region, the resolution made no mention of Vietnamese troops in Kampuchea. On the second issue there was a great deal of debate but no consensus was reached. East Timor, the former Portuguese colony which was integrated into Indonesia in 1976, but where local resistance under the anti-Indonesian Fretilin continues, was also discussed, despite Indonesia's strong objections. The issue had been deleted from the agenda in the Havana summit, but Fretilin attended this meeting as the guest of Angola and was supported by Vietnam, Laos, Vanatu and five Portuguese speaking

African countries. But no consensus could be reached on East Timor either.

The surprise resolution of the meeting concerned New Caledonia. It was proposed by the Vanatu delegation and was accepted by the others. It expressed the support of the ministers for self-determination and the early transition to independence. The issue of the troubled French Pacific territory could thus come up on the UN agenda.

UK-USSR

SPY INFESTATION

The First and Second World are apparently crawling with spies. This summer, Soviet agents were unearthed in the US and in West Germany. And in September, Gleg Gordiyevsky, a counsellor in the Soviet Embassy in London and the "resident" in charge of KGB operations in Britain, defected to the West. Gordiyevsky, a cultured, urbane man, about whom Moscow apparently suspected nothing, had been passing information to the West for nearly 20 years. He had earlier been in Copenhagen and was posted to London in 1982 as the deputy of the KGB resident, Arkady Guk. Earlier this year, however, Guk's name came up in the trial of Michael Bettaney, a British MI 5 employee who tried to sell secrets to the Russians, and was expelled, and Gordiyevsky became the topmost KGB agent in Britain. The information he has been passing has been very valuable and his analysis, according to sources, have shaped PM Margaret Thatcher's speeches regarding the Soviet Union.

The question arises as to why did the double agent decide to come in from the cold, especially when his wife and children are on the other side of the Iron curtain. According to speculation, it had something to do with the defection of Hans Joachim Tiedge, to the East in August. If Tiedge had betrayed Gordiyevsky to Moscow, he would feel bound to come out in the open. However, British sources say that Gordiyevsky defected before Tiedge. According to other speculation, he defected because of ideological reasons. He was getting tired of the Soviet public stance of favouring detente and the actual hard-line instructions from Moscow to destabilise his area.

Gordiyevsky's do briefing led to the expulsion of 25 KGB agents from Britain. The Russians retaliated by expelling 25 British diplomats, journalists and businessmen from Moscow. Later, six more were expelled from each side. So far, Moscow has generally refrained from this kind of man-to-man retaliation. In 1971, when Britain expelled 105 Russians from the country, the Soviets responded by ordering the ouster of 18 Britishers. Thereafter in 1981, one man was expelled from each side; in 1982, the British expelled two, the Russians one; in 1983, the British sent back six, the Russians two and last year the equation was one to one. In April this year, five Russians were expelled and the Russians sent back three. The number of 'burnt out' KGB agents has been steadily increasing and the Russians may find it increasingly difficult to send trained agents to the West, who are not already known there.

CENTRAL AMERICA

TORRID ZONE

Anxiety was added to trouble for El Salvadoran President Jose Napoleon Duarte, when his daughter, Ines Guadalupe Duarte Duran, a 35-year-old mother of three children was kidnapped in broad daylight by six armed men. Although no group claimed responsibility, Salvadoran investigators ruled out no one, including the country's right wing death squads. However, suspicion lay more deeply on the leftist Farabundo Marti National Liberation Front (FMLN), who had recently vowed to step up their activities after the government stepped up its air strikes against their rural bases. Although a dozen guerrilla safehouses were searched, there was no sign of the President's daughter who also heads Radio Cadena Libertad, a Duarte-linked radio station.

Further north, Nicaraguan-Honduran relations reached a new low, when Honduras, responding to an attack by Sandinista troops who were pursuing contra guerrillas, on a Honduran border village, launched a massive air attack across the Nicaraguan border, where they reportedly strafed Sandinista mortar batteries and shot down at least one Soviet-built helicopter. The Honduran action is difficult to explain because this was not the first time that Honduran sovereignty had been violated.

Meanwhile, the Contadora group (Colombia, Venezuela, Mexico and Panama) is fast becoming tired of its unsuccessful efforts to bring peace to the region. It had presented a draft treaty to Nicaragua, El Salvador, Costa Rica, Honduras and Guatemala in June 1984, but the treaty had

run into unforeseen complications. On Sep. 12, they presented another draft treaty, which includes a proposal for a corps of inspectors with powers to investigate suspicious activities. Although this provision is not liked by Nicaragua, it was put in at the insistence of Nicaragua's neighbours. The draft also says that detailed negotiations on the putting of arms and armies should start after the treaty is signed.

Negotiations will begin on Oct 7, but if no agreement is reached by November, the Contadora group will give up its efforts. The Contadora process had begun in 1983 with a meeting of foreign ministers of the four countries on Panama's Contadora island. So far, however, their efforts to negotiate a settlement to end cross border subversions, cut armies and arms, encourage democracy and promote human rights in the region have met with little success.

AFGHANISTAN

ANOTHER SOVIET OFFENSIVE

Early in September, Soviet troops launched a major offensive in the eastern Afghanistan province of Pakista in an attempt to relieve a besieged garrison at Khost and seal guerrilla infiltration routes. This offensive was the Soviet Union's third this year, following the massive Kunar offensive in May and June and the Panjsher valley offensive in July. According to a morse telegraph sent by Jalaluddin Haqani, commander of an Afghan partisan group called Hesbi Islam (Islamic Party), the Pakista offensive was the biggest battle of the war. According to Western sources, about 20,000 Soviet paratroopers were involved against a group of about 5,000 mujahideen (Afghan rebels). Under the Soviet assault, the mujahideen resistance around Khost first wavered and then broke.

Besides relieving the garrison and sealing guerrilla infiltration, the Russians, according to American analysis, were also interested in stopping the clandestine CIA arms pipeline that feeds the Afghan guerrillas and in intimidating President Zia-ul-Haq of Pakistan, who has turned a blind eye to the guerrillas operating from within Pakistan. However, it is difficult to either shut off the clandestine arms supply or seal the 1,800 km Afghan-Pakistani border, which has remained open throughout the war. The terrain is difficult and there are numerous caravans' tracks which are known only to the local people.

Meanwhile, the latest round of talks between Pakistan and the Soviet backed government of President Babrak Karmal ended inconclusively in Geneva. The talks, sponsored by the UN, are the main hope so far of a political solution to the turbulence in the region.

FRANCE

SECRET OF THE SUNKEN WARRIOR

Will the *Rainbow Warrior* become President Mitterrand's Watergate? The wind appears to be blowing that way. The *Rainbow Warrior*, a ship belonging to the anti-nuke Greenpeace movement was sunk a few months back off the coast of New Zealand. Two French citizens were held and French newspapers began to allege that the French secret service, the DGSE, had a hand in the affair. In September the prestigious *Le Monde* claimed that senior French officials including Gen Jeannou Lacaze, who was Chief of Staff of the armed services at the time the action may have been planned, Gen Jean Saulnier, Mitterrand's personal military adviser and Admiral Pierre Lacoste, the head of the DGSE, had ordered the bombing of the flagship. It also alleged that Mitterrand, despite his denials, may have known of the affair shortly after it took place, and had sat over it for three weeks and acted righteous and ordered an official inquiry only when the press got wind of it. If this were true, the defence establishment tilted to the investigating Tricot.

The Nixonian attempt at a cover up came out in the open later in the month, when PM Laurent Fabius admitted that French secret agents had sunk the *Rainbow Warrior* and had been acting under orders. The French Defence Minister, Charles Hernu and Admiral Pierre Lacoste resigned. The resignations were significant because both these persons were Mitterrand's right-hand men. While Hernu had played a pivotal role in the building up of the Socialist Party, Lacoste had been hand-picked to revamp France's intelligence set-up which had earlier been filled with hardcore right-wingers and which had caused the government much embarrassment in the past. Mitterrand's handling of the affair may affect his political survival if his Socialist Party loses France's parliamentary election next March.

Further, the affair has soured relations between France and nations in the South Pacific. The New Zealand PM has sharply criticised France

(Continued on page 59)

CAREER COUNSELLING

BY G. J. UNNITHAN, Director, Students Advisory Bureau, University of Rajasthan

I am a student of class XII. Does the Indian National Science Academy, New Delhi or the Indian Institute of Science, Bangalore conduct graduation courses in Physics, Chemistry or Maths?

Anupam Thakur, Patna

The Indian National Science Academy, New Delhi is a professional body of scientists and it does not conduct any courses. The Indian Institute of Science, Bangalore admits students to its various courses only after completion of B.Sc. Higher qualifications are also necessary.

Which engineering colleges in India, besides the IITs, conduct courses in Aeronautical Engineering?

Sanjay Mehta, Ahmedabad

Punjab Engineering College, Chandigarh and Anna University (Madras Institute of Technology), Madras conduct courses in Aeronautical Engineering. The latter university admits students only after they complete B.Sc. Jamia Millia Islamia, New Delhi is also planning a course in this subject.

I am a 23-year-old Science graduate. Can I get a class I job in CBI, RAW or in any intelligence department, except in the military?

Deepak Kumar, Muzaffarpur

Yes, you can qualify upto 26 years through the Indian Civil Services Exam, although there is no certainty that eventually you will be assigned to these intelligence departments.

I want to pursue my postgraduate studies in Agricultural Science in Australia. What is the procedure regarding entrance test, scholarship, etc?

Suneel Bhan, Srinagar

First, you must contact the Australian High Commission, Shanti Path, Chanakypuri, New Delhi to obtain form M 146 on which you will apply for eligibility for higher studies in Australia. Universities conducting courses in different branches of Agricultural Science include: University of Adelaide, GPO Box 498, Adelaide, Australia 5001; University of Melbourne, Parkville, Victoria, Australia 3052; University of Queensland, St Lucia, Queensland, Australia 4067; University of Sydney, New South Wales, Australia 2006 and the University of Tasmania, GPO Box 252 C, Hobart, Tasmania, Australia 7000. The universities provide you with further details

about admission (no entrance test) and scholarships.

Please give me details about forestry courses offered in India.

Kalyan Das, Birbhum

You may contact the College of Forestry, Kanke, Ranchi-834 006 which conducts a three-year course after intermediate with Science, Biology or Maths.

I am a class XII student and I want to make agricultural research my career. Please provide detailed information regarding the institution or university I should enrol in and the procedures for getting admission.

Nazim Alam, Mussoorie

There are more than 20 agricultural universities in India with facilities for advanced research in a large number of specialised subjects. You will first have to take admission to the B.Sc. (Ag.) course which is of three to four years duration and then complete an M.Sc. (Ag.) course of two years duration. In UP you may apply to the G.B. Pant University of Agriculture and Technology, Pant Nagar-263 145; C.S. Azad University of Agriculture Science, B.H.U., Varanasi-210 005 or the Allahabad Agricultural Institute, Allahabad-211 007. The first three universities have an entrance test and advertise early in the year. Besides these specialised institutes, there are many colleges in UP which conduct B.Sc. (Ag.) courses.

I am a first year student of B.Com. I want to become a cine director-cum-photographer. Which organisation/institute conducts this course? What is its duration?

R. Ravichandran, Madras

The Film and Television Institute, Pune-411 004 conducts courses in film direction and motion picture photography for graduates. The duration is three years.

Kindly let me know whether admissions are open to Indian students in the Asian Institute of Technology, Bangkok. If so, then please give the necessary details.

Milind Mishra, Amravati

The Asian Institute of Technology (AIT), G.P.O. Box 2754, Bangkok 10501, Thailand, conducts postgraduate and doctoral courses in (1) Agricultural and Food Engineering (2) Computer Applications

(3) Energy Technology (4) Environmental Engineering (5) Geo-technical and Transportation Engineering (6) Human Settlements Development (7) Industrial Engineering and Management (8) Structural Engineering and (9) Water Resources Engineering. Admissions are conducted in January, May and September for different courses. Candidates must have a four-year bachelor's degree in the appropriate field with well above average grades and be fluent in English. The total cost per annum is approximately U S \$11,000. A limited number of scholarships are available both from AIT and other donors.

What exams does one have to take to qualify as a company secretary? I would also like to know in detail about the educational qualifications required and the age limit.

Sudha Malhotra, Jamshedpur

The Institute of Company Secretaries of India, ICSI House, 22 Institutional Area, Lodi Road, New Delhi-110 003 is the statutory institute for conducting exams for company secretaries. In order to become eligible as a student, a candidate must be 18 years of age and should have passed the preliminary exam of the institute after graduation. Exemption from the preliminary exam is given to degree holders with 50% marks or master's degree holders of certain other categories of graduates. Subsequently, there is an intermediate exam and a final exam. Registration is possible at the beginning of every month, oral or postal tuition is compulsory. The prospectus containing full details, application forms, syllabi, etc may be obtained from the secretary of the institute on payment of Rs 5 plus postage.

NOTE TO READERS

Before rushing in your career problem, check if it can be solved by looking up our sections on *Careers* or *Career Counselling* in the earlier issues. Space is limited; the mail received is staggering. Letters chosen are those of general interest or in particular cases where the information is hard to find or has not been published before. Many readers ask for a personal reply. Sorry, this is not possible. So please don't send postage or envelopes. Make your queries specific and brief. Send them to Career Counselling Career & Competition Times, 10 Daryaganj, New Delhi-110 002. Your letters should be accompanied by the coupon.

FOR & AGAINST

BY ILA SRIVASTAVA

Should The Business Community Be Socially Committed?

In recent years the social aspect of business has been a much discussed and much debated topic throughout the world. The issue: whether business is an identity distinct and separate from the society in which it functions or has it, over the years, entwined itself with society to such an extent that the impact of its functioning on the life of a common man can no longer be ignored? Should the business community mind its own "business" away from the mainstream of society or should it shoulder social responsibilities in tune with its rapidly expanding interests?

The arguments in favour of business shouldering social responsibilities are propagated by a band of modern thinkers led by George Steiner. The arguments against the need for social consciousness among businessmen are inspired by the works of Milton Friedman.

For

■ Corporations are made by society and should therefore respond to the demands of society. The success of a business in itself is clear evidence of the social value of that business over its less successful competitors. It operates within a set of powerful cultural norms and the businessman knows that changes in them must be incorporated in his decision-making process.

■ The long-run self-interests of business are best served when business assumes social responsibilities. Arjay Miller feels that under current conditions, management cannot effectively discharge its responsibilities to shareholders unless it also behaves responsibly with employees, customers, government and the public at large.

■ The era of purely private business for private profits is gone. Today it is the duty of business to report to the public, whose money it is constantly borrowing in order to conduct business. This implies that bearing social responsibility is a moral responsibility.

■ Even if business is considered to be an economic activity, economic considerations cannot be allowed to override social considerations or be isolated from a value framework without endangering social values.

■ Since many social and ecological problems are created by business activities it is the moral duty of businessmen to deal with these problems.

Against

■ Business is basically an economic institution the function of which is to produce and make profits; maximisation of profits is the only guiding factor.

■ The government is the only organisation which is responsible and accountable to the general public comprising the society. It alone should discharge social functions. The corporations merely have a complementary economic role to play.

■ Over the years the corporations have become so accustomed to performing their economic role that they cannot be expected to effectively deal with social problems. They are habituated to thinking only from the economic perspective.

■ Even as late as 1963, Milton Friedman wrote that there was only one social responsibility of business - to use its resources and engage in activities designed to increase its profits.

■ The only moral duty of business is to sustain work efficiency so that the economic balance of society is undisturbed. ■

LATEST IN SCIENCE

Comet Rain

ACCORDING TO the mass extinction theory, every 26m years or so, a rain of comets that lasts hundreds of thousands of centuries bombards the earth. The impact of these comets generates clouds of debris in the atmosphere which block the sun. When this happens temperature on earth drops and a majority of the existing plant and animal species perish.

Earlier theories believed in primordial floods or volcanoes. Some responded to the lure of Darwin and insisted that old creatures gradually give way to the supremacy of the new. But as geology became more precise, scientists determined at least five great dyings in the last 600m years which disproved earlier theories.

In spite of evidence of destruction the cause could not be determined. Till 1977 the search for the cause was directed towards the earth. In 1977,

geologist Walter Alvarez's find made scientists look heavenwards for the answer. Alvarez had found a high concentration of an element known as iridium in between a layer of rock belonging to the Cretaceous period and another belonging to the present Tertiary period. The high concentration of iridium pointed towards the cause of the sudden disappearance of creatures of the Cretaceous period. High concentration of iridium occurs in only three places: in the earth's core; in the cosmic dust drifting to earth from a nearby supernova (exploding star) or from extra-terrestrial objects like asteroids and comets. The first two possibilities were ruled out and the last seemed most plausible. After this startling theory, many more scientists provided additional arguments to back it up. One statistical study concluded that these mass extinctions occurred every 26m years.

Three theories have been propounded

to explain this cycle. The first says that whenever the sun passes through the Milky Way plane, the swirls of dust it encounters would gravitationally disrupt a vast bubble of comets (called Oort cloud) which would start hurling comets towards the sun. However, this cycle would occur every 33m years. The second theory assumes the existence of a companion star to the sun, called Nemesis, which disrupts the Oort cloud and sends comets to the earth. The third theory is based on the tenth planet of the solar system, Planet X. It follows a sharply inclined elliptical orbit that continuously shifts because of the gravitational tug of the other planets. Every 28m years the shifting orbit intersects a disc of comets that lies beyond the orbit of Neptune. As Planet X passes through the disc, it dislodges comets, sending them towards earth.

None of these explanations is fully satisfying and scientists are now trying to find solutions by looking heavenwards through their telescopes.

A S.

TELEVISION VIEW FROM THE TOP

V.N. Gadgil, Minister of Information & Broadcasting, in an exclusive interview with Y.C. HALAN & JYOTSNA SHARMA, assesses the hardware and software development of the Indian TV—as well as the role the small screen plays as a medium of mass communication.

Mass media in India—television, radio, newspapers, films—have, over the years, made rapid strides. But television in particular has to its credit the most phenomenal progress. It has become the most powerful and effective medium of mass communication. That too within a time span of less than four years. Its coverage has expanded from an inadequate 20% to a remarkable 70%. The country at the moment has an estimated 5m TV sets and in terms of population television has a reach of approximately five crore people. And with new transmitters being installed in rapid succession to bring even the remotest parts of India under the TV network, these figures are likely to register a substantial increase in the near future.

And while this expansion in terms of hardware goes to the government's credit, it has increased the responsibilities of the Information & Broadcasting (I & B) Ministry manifold. For it requires software planning on the same scale. The Minister for Information & Broadcasting, V.N. Gadgil, discusses the various aspects of television expansion in India.

On Impact of TV

According to the minister, both TV and radio enjoy widespread popularity among the Indian populace right from the urban elite of metropolitan cities to the illiterate rustics of far flung villages. In fact, this popularity has had an impact on the lives of the people in a radical way. It has affected their literary pursuits as well as social life. Cities like Bombay and Poona, Gadgil reminisces, where once it was difficult to

go out for a walk on Sunday evenings owing to the overcrowded roads and streets, now bear a deserted look as the majority of the people are engrossed in watching their favourite programmes on TV. And to illustrate the growing awareness among the villagers and the popularity of TV in villages, he cites an incident. Last year, while in the Communications Ministry, Gadgil visited a small village in north India. Addressing a meeting of farmers he asked them what they wanted for their village. A 70-year-old kisan immediately stood up and asked him to provide the village with a telephone and a TV. When the rather surprised Gadgil informed him that TV was the province of H.K.L. Bhagat, the then Minister of I & B, pat came the septuagenarian's reply: 'Woh to programme ka hi karten hain, lines to aap deten hain'. (He only looks after programmes; you provide the lines.) This incident, the minister feels, reflects the hunger for development even among the illiterate rustics.

On youth and children's programmes

Special attention is being given to improving youth programmes and programmes for children both quantitatively as well as qualitatively. And for this Gadgil has decided to increase the time allocated to these programmes. To improve the standard of children's programmes arrangements are being made to buy Walt Disney films as well as children's films from Canada, USSR and Czechoslovakia which are known for their advancement in children's films. Czechoslovakia is, in fact, the leader in producing animation films.

As far as programmes for youth are

CALLING READERS

"Indian TV—Changing The Scene"

"Development of the Indian TV during the past four years has been remarkable. So much so that TV has become the most effective instrument of communication with the masses. No longer is the Indian small screen viewed as an idiot box. However, there is still scope for further improvement.

- What function should the TV perform—Educate, entertain or alleviate the masses?
- Should autonomy be granted to Doordarshan?
- In what ways can the software (programmes) be improved?

Readers are invited to express their opinions on all the above topics in not more than 250 words each.

Please send in your entries latest by **November 25**. The best three entries will receive cash prizes worth **Rs 150, Rs 100 and Rs 75**. Address your entries to The Editor, Career & Competition Times, 10, Daryaganj, New Delhi-110 002.

concerned, Gadgil agrees that more programmes on science and education should be introduced. But this, according to him, is not the sole responsibility of his ministry. The UGC programmes are, for example, produced by the Ministry of Education. However, the government is now planning to televise model lectures and lessons presented by the best teachers of various states in a nutshell and sell the video recordings of these to schools and colleges. Also, the Ministry of Sports and Youth Affairs will advise Films Division to make documentaries designed to inform and educate young people. Further, TV interviews with famous sports personalities will be telecast frequently to cultivate an interest in sports among the youth. And, quite interestingly the I & B Ministry is contemplating the introduction of serials based on Hindu mythology in which mythological heroes are portrayed as youth leaders. These serials will essentially be designed to familiarise young people with their culture. Even newspapers will be persuaded to carry youth columns to give young people adequate coverage.

On TV serials

The main functions of the mass media, says Gadgil, are to inform, educate, entertain and, if possible, elevate. Therefore, the attempt in serials too is to elevate even as they entertain. Each serial hence brings a social message. However, he agrees that there is lot of scope for improvement for while the production is slick and at par with foreign serials the content is lacking. Most serials shown on TV nowadays are urban-oriented. Gadgil feels that a change of class is required and that serials should also deal with the lives, problems and aspirations of the lower classes e.g. life of people living in a chawl in Bombay or slum dwellers in Delhi. Then, serials will be produced in Bombay, Calcutta and Madras too.

As far as the selection of sponsored programmes is concerned, he concedes that a handful of bureaucrats cannot decide what programmes the entire country should see. Also, the government is accused of partiality and favouritism while selecting sponsored programmes from amongst the innumerable programmes produced. And it is to resolve these problems that the government has now decided to set up a committee of officials and non-officials to select sponsored programmes and feature films. The committee will be constituted by highly respected people like senior retired judges and academics. This will ensure fair and unbiased selection of good programmes.

Other programmes

Doordarshan has started 14 informative and general awareness programmes such as Focus, Panorama, Folk Arts of India Premier Institutions of India. Gadgil also

Earn a West German Advanced Management Diploma !

Baroda Productivity Council offers you an easy-paced but potent correspondence course which will help you to stop struggling and start growing again.

A West German consultant, Wolfgang Mewes, analysed hundreds of successes and failures and developed what he termed an Energo-Cybernetic Strategy—EKS (in German, 'cybernetic' starts with 'k'). Based on natural laws and common sense, EKS is a devastatingly simple strategy for self and corporate development. Indians exposed to EKS testify to being amazed, awakened, shaken up, born again.

EKS is not just some new-fangled management theory; for the thinking person it is a way of life, with success as a casual by-product.

Though simple, EKS is not simplistic. Like all profound concepts, it evades a compact off-the-cuff definition. To understand it a little better you'll have to read the prospectus. After that, you may never be the same again. EKS is positively addictive !

Minimum Qualification :
ONLY AN OPEN MIND.

For further details regarding the one year correspondence course leading to the Advanced Management Diploma in EKS, please send your bio-data and a Rs.10/- Crossed Postal/Money Order to :

EKS Division 20

Baroda Productivity Council
Productivity House, Productivity Road
Baroda - 390 005

suggests the screening of programmes designed to inculcate national integration among the masses. Programmes dealing with places of historic interest or people promoting national integration in some way can be televised. Here he gives the example of Ghulam Ali who despite being a Muslim has an absolute mastery over thumri and dadra. He also narrates his meeting with a Russian lady who had an excellent command over Marathi language.

Then, in order to improve the quality and content of news, Gadgil says all efforts are being made to improve newsgathering and news presentation techniques. News on TV requires a good selection of items accompanied by effective and appropriate visuals as far as possible. For this the I & B Ministry is inviting the services of freelance reporters and cameramen with initiative and news sense. Also it is planning to have studio facilities and outdoor broadcasting vans operating in all the state capitals to give timely and adequate coverage of important events.

To give adequate coverage to local programmes in various states the I & B Ministry has asked for the sanction of three transponders in the next satellite—INSAT-IC. If this is granted then adequate coverage can be given to regional language programmes for states.

Gadgil also feels that professionalism is needed in the media set-up in the country. The lack of professionalism has led to a decline in standards of production. Which is why professional producers are being engaged to produce quality programmes for Doordarshan. The government is also planning to start an all-India service called the Indian Broadcasting Service to improve the planning and programmes on AIR and Doordarshan. Consisting of the management cadre and programme cadre it will comprise of people with professional backgrounds.

Autonomy for AIR and Doordarshan

While programmes like Janvani, where Cabinet ministers answer questions put to them by a select audience representing the country, have gone a long way in increasing the credibility of Doordarshan, they are also one tentative step in the direction of total autonomy, which, Gadgil says, may be possible some years hence. For the moment, however, the country is not ready for it. What the government may do in its place is give complete editorial freedom to AIR and Doordarshan, subject to the guidelines of a media advisory committee.

In any case Gadgil is the last Cabinet Minister scheduled to appear in the Janvani programme. To answer on camera the queries of the masses with regard to his portfolio. And the last programme will feature none other than the PM himself. ■

TV ADS

DATA INTERPRETATION-3

BY S.P. GUPTA & M.P. GUPTA

A confident administrator knows how to translate abstruse data into readily digestible figures and graphs. It is a confidence that every administrator must have and the ICS' Mains in particular look for it. Here we conclude our series on data interpretation designed to help you face some of the challenges of administration with verve and confidence.

Problem 1

Present the following information in suitable tabular form:

In 1970 out of a total of 1,750 workers of a factory, 120 were members of the trade union.

The number of women employed was 200, of which 175 did not belong to a trade union. In 1975, the number of the union workers increased to 1,580 of which 1,290 were men. On the other hand, the number of non-union workers fell down to 208, of which 180 were men.

In 1980, there were 1,800 employees, who belonged to the trade union and 50 who did not. Of all the employees in 1980, 300 were women of whom only 8 did not belong to the trade union.

Interpretation

Table showing the sex-wise distribution of union and non-union members for 1970, 1975 and 1980

Category	1970			1975			1980		
	Male	Fe- male	Total	Male	Fe- male	Total	Male	Fe- male	Total
Members	1,175	25	1,200	1,290	290	1,580	1,508	292	1,800
Non-members	375	175	550	180	28	208	42	8	50
Total	1,550	200	1,750	1,470	318	1,788	1,550	300	1,850

Problem 2

In a sample study of coffee-drinking habits in two towns, the following information was received:

Town A: Females were 40%; total coffee-drinkers were 45% and male non-coffee-drinkers 20%.

Town B: Males were 55%; male non-coffee-drinkers were 30% and female coffee-drinkers 15%.

Represent the above data in tabular form:

Interpretation

Table showing the coffee-drinking habit of towns A and B

Attribute	Town-A			Town-B		
	Males	Fe- males	Total	Males	Fe- males	Total
Coffee-drinkers	40	5 ¹	45	25 ³	15	40 ⁵
Non-coffee-drinkers	20	35 ²	55	30	30 ⁴	60 ⁶
Total	60	40	100	55	45	100

S.P. Gupta is a Reader at the Faculty of Management, University of Delhi. And M.P. Gupta teaches in the Department of Commerce, Bhagat Singh College, University of Delhi.

Notes

1. Total coffee-drinkers in Town A were 45%. Therefore, non-coffee drinkers were $100 - 45 = 55\%$. Since total female coffee-drinkers were 40%, male coffee-drinkers $(100 - 40) 60\%$.

Male non-coffee-drinkers were 20%. Therefore, male coffee-drinkers $(60 - 20) 40\%$. Hence, female coffee-drinkers were $(45 - 40) 5\%$.

2. Female non-coffee-drinkers were $(55 - 20) 35\%$ in town A.

3. In town B, as per given information, total males were 55%. Therefore, total females were $(100 - 55) 45\%$. Since male non-coffee-drinkers were $(55 - 30) 25\%$.

4. Since female coffee-drinkers were 15%. Therefore female non-coffee-drinkers were $(45 - 15) 30\%$.

5. Total male and female coffee-drinkers will be $25 + 15 = 40\%$.

6. Total non-coffee-drinkers were $(100 - 40) 60\%$.

Problem 3

Out of a total number of 1,807 women who were interviewed for employment in a textile factory of Bombay, 512 were from textile areas and the rest from non-textile areas. Amongst the married women who belonged to the textile areas, 247 were experienced and 73 inexperienced, while for non-textile areas, the corresponding figures were 49 and 520. The total number of inexperienced women was 1,347 of whom 111 resided in textile areas. Of the total number of women 918 were unmarried and of these the number of experienced women in the textile and non-textile areas was 154 and 16 respectively. Tabulate the given information.

Interpretation

I. The total number of women interviewed = 1,807. Number of women from textile areas = 512. Therefore, the number of women from non-textile areas = $1,807 - 512 = 1,295$.

Total number of married women in textile areas = $247 + 73 = 320$.

Total number of married women in non-textile areas = $49 + 520 = 569$.

Total number of inexperienced women = 1,341.

Thus, the total number of experienced women = $1,807 - 1,341 = 466$.

Total number of unmarried women = 918. Therefore, the total number of married women = $1,807 - 918 = 889$.

Total number of unmarried experienced women in textile areas = 154.

Total number of unmarried experienced women in non-textile areas = 16.

II. The attributes given in the problem are

(a) Married and unmarried women

(b) Textile and non-textile areas

(c) Textile and non-textile areas can be sub-divided into experienced and inexperienced.

The above information can be tabulated as under:

Table showing the number of women interviewed for employment in a textile factory according to their marital status, experience, etc.

Table

Marital Status	Textile Areas			Non-textile Areas			Total		
	Exp.*	In-exp.*	Total	Exp.	Inexp.	Total	Exp.	Inexp.	Total
Married	247	73	320	49	520	569	296	593	889
Un-married	154	38	192	16	710	726	170	748	918
Total	401	111	512	65	1,230	1,295	466	1,341	1,807

* Exp. = experienced; Inexp. = inexperienced.

Problem 4

Comment on the following statements:

(a) The profits of firm A are Rs 70,000 for the year 1984, and the profits of firm B, for the same period, are Rs 90,000. Therefore, firm B is better than firm A.

(b) 80% of those who smoke develop indigestion in middle age. Hence smoking leads to indigestion.

(c) National income of the US is more than that of India.

(d) Per capita income of India for 1984-85 is four times as high as in 1964-65. Therefore, people are four times better off in 1984-85 as compared to 1964-65.

Interpretation

(a) On the basis of the given information, it can be concluded that firm B is better than firm A. But for this purpose, we have to take into account many other variables like the amount of capital investment in both the firms. It is possible that when the comparison is made between the ratios of gross profits to capital investment, the result may be the reverse.

(b) This type of generalisation is not valid, unless proper proportion of the smokers and non-smokers is ascertained in the total population. Then we can find out the number of persons suffering from indigestion out of smoking population. The percentages, then can provide the true picture in this connection. Secondly, indigestion may not be only on account of smoking, but may be on account of other causes too. Therefore, different causes are to be analysed for the validity of the statement.

(c) For comparison purposes, it is necessary that the definition of national income is taken to be the same in both countries. For example, one country includes the income of the housewife in the computation of the national income and the other country does not with the result that the whole conclusion will become erratic.

(d) In this connection it is necessary to study the behaviour of the prices during this period. If there is no change in the prices during this period only then can we draw this conclusion.

Problem 5

Represent the given information with the help of suitable diagrams:

Pattern of investment in organised industrial sector (Rs crores)

	Public sector	Private sector	Total
First Plan	1,560	1,800	3,360
Second Plan	3,650	3,100	6,750
Third Plan	6,300	4,100	10,400
Fourth Plan	13,635	8,980	22,615

Interpretation

The above information can be presented with the help of different diagrams and graphs. The possible diagrams can be— (a) Multiple bar diagram, (b) Subdivided bar diagram and (c) Line graph.

Problem 6

Draw a suitable diagram to represent the following data on livelihood patterns in India, the US and the UK:

Occupation	India	USA	UK
Agriculture and forestry	71%	13%	5%
Manufacture and commerce	15%	46%	55%
Other industries and services	14%	41%	40%
Total	100%	100%	100%

Interpretation

that there is more dependence on agriculture and forestry for livelihood in India than in the US and UK. Similarly, the UK is more dependent on manufacture and commerce than India and the US.

Problem 7

Construct a suitable diagram to represent India's imports and exports for the following years:

Year	Imports (In hundred crores rupees)	Exports
1972-1973	19	20
1973-1974	30	25
1974-1975	45	33
1975-1976	53	40
1976-1977	51	51

Interpretation

In this connection multiple line graphs can be drawn to indicate imports and exports in India.

Problem-8

Present the following information in a concise tabular form and indicate which type of lamp shows the greatest wastage during manufacture.

Lamps are rejected at several manufacturing stages for different faults. Twelve-thousand glass tubes are supplied to make 40-watt, 60-watt and 100-watt lamps, in the ratio of 1:2:3. At stage I, 10% of 40-watt, 4% of 60-watt and 5% of 100-watt bulbs are broken. At stage II about 1% of the remainder of the lamps have broken filaments. At stage III, 100, 100-watt lamps have badly soldered caps, and half as many have crooked caps; twice as many 40-watt and 60-watt lamps have these faults. At stage IV, about 3% are rejected for bad type marking and 1 in every 100 are broken while packing.

Interpretation

Wastage of electric lamps during manufacture

Power of lamps (Watts)	Total no of glass tubes supplied	Number rejected at stages						Rejections Total %
		I Broken bulb	II Broken filament	III Bad cap	IV Bad marking			
40	2,000	200	18	300	59	577	29	
60	4,000	160	38	300	140	638	16	
100	6,000	300	57	150	220	727	12	
Total	12,000	660	113	750	419	1,942		

40-watt bulbs have the greatest wastage during manufacturing, i.e., 29%.

(Concluded)

HELLO GOOD BUY!

Car telephones are on the move in the Federal Republic of Germany. And a new 'C network' system is designed to take them places. By far the most modern country-wide telephone network in the world, this system will have the capacity of 1,00,000 subscribers by 1983 from the 25,000 car telephones in use at the moment. With the help of C network, a car telephone subscriber will be able to receive calls from anywhere in the world independent of where the vehicle may be—an unheard of advantage. That too in a car phone essentially designed for comfortable single-hand use.

HOW TO MANAGE MANAGEMENT-2

If you have the will to take on CAT or other management entrance exams, we have the way to them. As shown to us by the IIM Ahmedabad students. In this second and final instalment.

The rigours of management, the taxing demands of this highly sophisticated branch of professional knowledge and application—they form the basis of the design and layout of admission tests like the CAT.

Since a manager is expected to think logically and fast, efficient time-management becomes a crucial factor in the decision-making process. No wonder this is a characteristic feature of the written hurdle as well. "The candidate just cannot afford to play loose with time. Inefficient time-management has spelt the downfall of many a brilliant aspirant," said a first year student.

How does one go about mastering this art? Practice is the key word. Without it not even the best brain can beat the CAT. Practice develops the ability to withstand pressure and avoid mental exhaustion. It assists in checking the tendency to misinterpret simply-worded questions. At least a month before the exam, the candidate must start regular daily practice using sample test papers. It goes without saying that hardly much purpose would be served if the duration of the actual test is ignored while practising. The B.E. from BHU underscored this point when he said that "practising for shorter durations would not help one in guarding against mental exhaustion". The paper is designed in such a way that without the backing of consistent practice, the candidate will not be able to maintain his speed. He is bound to slow down.

Once the month has flown past and the candidate finds himself actually sitting in the grim reality of the exam hall, he must remind himself to spend the first five minutes going through the entire question paper. To identify the questions which he thinks he can manage without much ado, and after finishing off with them, to attempt the more tricky ones. Applying this strategy can be of tremendous help in avoiding wastage of precious time. The B.E. felt that probably another reason why he did not make it in the first try was because he spent a lot of time vainly attempting the difficult questions. Finally when zero-hour was fast approaching he realised he was leaving scores of easy questions absolutely untouched. He said, "Since there is negative marking it is more desirable to attempt the easy questions

first, the chances of getting them correct being much higher."

Another tip on time-management. While attempting the section on English, it is advisable, according to a second-year, to first read the questions that follow the given reading comprehension passage and then read the passage. This will help the candidate to pick out quite a handful of answers while giving it the very first reading itself. He may even find all the answers.

An attitudinal aspect that needs to be emphasised here is the importance of not taking easy questions for granted. One tends to become careless while attempting such questions. Caution must be exercised so that barely noticeable twists can be detected and the correct answer ticked.

On the other hand, some questions are worded in such a way that they appear difficult. Whereas they are extremely simple requiring application of basic knowledge. If the candidate enters the hall with the preconceived notion that such questions are not going to be asked, he is in for trouble. Therefore, it is important to take each question for what it is worth, not imposing one's own value or standard judgment. A second-year felt that having such an attitude can go a long way in ensuring a place for the candidate in the final list.

The psychological factor is equally important while combating the written test. The candidate may have performed miserably in a particular section. But he should take care not to allow that to mar his performance in the other sections. The experience of a second-year should clarify this point. He performed disastrously in the English section. He was just beginning to feel discouraged and on the verge of giving up when he somehow managed to recoup his confidence and with gritted teeth attempted the other two sections.

He did them well though he did not hope for much in the results. He was indeed taken by surprise when he actually received a call for the group discussion and interview. "Practice helped me develop an inner resilience which stood me in good stead at that crucial moment when I did not know whether to stop or to go ahead."

Since negative marking haunts exams like the CAT, it is imperative that if one is even slightly uncertain about a particular question, it should be avoided like the plague. Guessing games can prove to be very costly indeed. As one second-year remarked, "It is better not to attempt a question one is uncertain about and get zero rather than tick it and get minus marks in the process. One just cannot afford to take chances with exams like these." If, however, one is confident that he is mother fortune's blue-eyed boy, then perhaps he can venture to take the risk. But even here, the possibility is always there that for some inexplicable reason, he might have fallen out of favour.

As far as the group discussion and interview are concerned, nothing much can be done by way of meticulous preparation. What one must do, however, is to brush up one's basics in his or her subject(s) of specialisation. This is an absolute must because, as the B.E. remarked, "The board seems to have a fetish for basics." Almost all the students interviewed were, it appears, thoroughly drilled. Thankfully, their fundamentals were not shaky and they managed to steer clear from the reject list.

"Many candidates suffer from the misconception that one should speak a lot in the group discussion," said a first-year, who apparently spoke just once or twice and that too only towards the tail-end. Even a single 'sense-packed' sentence can work wonders. If the candidate is unfamiliar with the topic, then it is advisable to listen very carefully to what is being said by the other participants. A lot of facts can be discerned this way. And then after juggling around with them for a while, one can come out with something that is refreshingly original and based on logic and common sense. Restraint, therefore, is another point to be borne in mind. The desire to impress should be curbed. Being one's natural self and speaking only when convinced that he has something worthwhile to say can pay rich dividends. Of course, simultaneously, one must be alert and actively looking for a suitable opportunity to speak.

In the final analysis, attitude plays as important a role as consistent and thorough preparation in the attempt to make it to the IIMs or, for that matter, any institute or faculty of repute.

(Concluded)

HOW TO TACKLE CAT-3

BY EDGAR THORPE

Smooth administrative functioning depends on the ingenuity of an efficient manager, who, in turn must possess the ability to reason out each one of his decisions. Tackle these Data Sufficiency Tests, which involve the use of your reasoning abilities, and you would have won an easy battle with the tough CAT that guards the IIM doors.

DATA SUFFICIENCY TESTS

The ability to reason judiciously and correctly is the foremost requirement of managers who have to take the right decisions in day-to-day administrative functions. The Data Sufficiency (DS) tests involve logical deduction of data from a given set of facts in order to answer the question. Through DS tests the candidate's reasoning ability with regard to the basic knowledge of Arithmetic, Algebra, Geometry is tested. There are usually 15-20 questions in the DS section of CAT to be answered in 15-20 minutes. **The questions are given in the order of increasing difficulty.** In order to tackle this section one must first develop a comprehensive understanding of both the format and the type of questions asked.

The Format

The DS tests are generally based on the following format. There may, however, be differences in the construction of sentences.

Directions: Each of the following problems has a question and two statements, which are marked (1) and (2). Use the data given in (1) and (2) together or separately along with other available information (your own knowledge) and decide whether the statements are sufficient to answer the question:

(A) If you get the answer from (1) alone but not from (2) alone

(B) If you get the answer from (2) alone but not from (1) alone

(C) If you get the answer from (1) and (2) together, although neither by itself is sufficient.

(D) If statement (1) alone and statement (2) alone are sufficient

(E) If you get the answer from statements (1) and (2) together but need more data or do not get the answer from (1) and (2) either alone or together.

Example

1. Find the length of AB, if z is 90° and $CB = 6$ ".

(1) $CA = 6$ "

(2) $x = 45^\circ$

Answer: Since z is a right angle, $(AB)^2 = (CB)^2 + (CA)^2$, so $(AB)^2 = (6)^2 + (CA)^2$ and AB will be positive square root of $36 + (CA)^2$. If you find the length of CA, you can solve the problem.

Statement (1) gives $CB = 6$ ", thus $(AB)^2 = 36 + 36$, so $AB = 6\sqrt{2}$. Hence statement (1) is sufficient.

Statement (2) gives $x = 45^\circ$ but since the sum of the angles in a triangle is always 180° and z is 90° , then $y = 45^\circ$. So x and y are equal (45° each), that means sides opposite x and y must be equal to $CB = CA$. Thus $CA = 6$ and $AB = 6\sqrt{2}$. So statement (2) alone is also sufficient to solve the problem. Therefore, the answer is (D), i.e., "if statement (1) alone and statement (2) alone are sufficient".

Other DS Tests

The DS section usually consists of four parts, viz:

- (1) the given (original) information
- (2) the question that is asked based on the given information in part (1)
- (3) statement (1)—from which the answer has to be drawn
- (4) statement (2)—from which the answer has to be drawn

Part (1): The information given in the beginning of the question including any geometrical diagram forms part 1 of the DS question format. For instance, "Find the area of a rectangle if its length is 20 cm"

or "If 10 workers lay 100 bricks on a floor measuring...sq ft. how many workers are needed to complete the job in... days?" In other words, the information given is in the form of a definite statement.

Part (2): A question is either given in the information sentence itself as in the above example or followed afterwards by the information part of the format. Generally the question part is presented in two forms and pertains to mathematical problems.

Asking a specific number in an answer, e.g. "What is the area of the rectangular figure shown in the diagram below?" In such cases an answer can be got only from one and only one number fits the information.

Requiring "Yes" or "No" as an answer.

In any case, in both instances the answers have to be drawn from the given statements only.

Part (3): The question is followed by two statements, each of which will be given a particular relationship or sometimes even two facts/relationships. You have to decide whether the problem can be solved by using the first statement alone (not the second statement) or second statement alone (not the first statement) or first and second statements together but neither alone or either of the statements alone or none of the statements. Hence there are five alternatives. This can be well illustrated by the following table:

Answer Choice	Is statement (1) sufficient in itself?	Is statement (2) sufficient in itself?	If statements (1) and (2) together are sufficient
A	Yes	No	Not applicable
B	No	Yes	-do-
C	No	No	Yes
D	Yes	Yes	Not applicable
E	No	No	No

From the above you can conclude:

Answer Choice A: Statement (1) is sufficient to answer the question

Answer Choice B: Statement (2) is sufficient to answer the question

Answer Choice C: Neither (1) nor (2) are sufficient but both together are sufficient

Answer Choice D: Either statement (1) alone or statement (2) alone is sufficient

Answer Choice E: None of the statements singly or jointly is not sufficient (i.e., answer cannot be found from the given statements)

You will note that C and E require consideration of both the statements. If either (1) or (2)/or (1) and (2) together is/are sufficient to answer the question (i.e., answer choices A, B and D) you need not consider choices C and E. C and E are to be considered only when the answer cannot be found from A, B and D.

Hence for determining the sufficiency of one of the statements you will automatically at least eliminate two of the answer choices. This will enable you to make a good guess even if you are not sure of the correct answer. Furthermore, supposing you are considering (C) — both statements together — when the answer is either (A) or (B), it is possible that you are not keeping the information separate in the two statements and think you are using both when one statement is enough. Similarly if you are considering answer choices (A) or (B), when the correct answer is (C), you may be using the information from one answer only while you are considering the sufficiency of the other.

However, there are a few rules that need to be observed while tackling the DS section:

(a) Use the data provided in the question and Statements (1) and (2).

(b) Apply your basic knowledge of maths.

(c) Also refer to all that you know but the answer has to be confined to the five choices.

(d) If you know the correct answer (solution) to the problem, but find it impossible to derive it from statements (1) and (2) based on the answer choices A to E, do not mention the answer. Just confine yourself to the statements and answer choices.

(e) Carefully observe the diagrams in case of geometrical problems and use your fundamental knowledge to solve the problem. Then see the answer choice.

(f) Long and lengthy computations should be avoided due to paucity of time. You should try to quickly understand the problem and answer from the choices given underneath. In case of difficulty, go to the next question and return to this after finishing all the other questions, if time permits.

(g) Simplify the information (part 1) from one of the statements and try to see if the question can be answered from it. Now add the information from the other statement (without taking into consideration the first statement) and see if that is sufficient to answer the question. If neither of the two statements is sufficient to answer the question, consider whether both the statements together are sufficient for the purpose. In the latter case, each statement must contain part of the information to solve the question.

(To be concluded)

DEVELOPING FADS IN DEUTSCHLAND

The West Germans are doing their bit for international understanding by wearing Tunisian shirts, Taiwanese men's suits and Indian sportswear. In keeping with Finance Minister, Gerhard Stoltenberg's assertion that Bonn is interested in helping the Third World develop, the FRG, in 1984, imported garments and textiles worth 32b marks, mostly from developing countries. The Cologne-based German Finance Company that assists in investments in developing countries has provided funds amounting to 1.3b marks for German private sector investments in developing countries.

Practice Tests

In preparing these tests, we have tried to visualise the questions you are likely to face in your actual exam. Great care has been taken to frame questions which are of the same standard as those you will encounter in your exam.

Rating: Evaluate your performance on the basis of the following score-card

- 100 questions in 60 minutes-Excellent
- 60 questions in 60 minutes-Good
- 50 questions in 60 minutes Fair
- 35 questions in 60 minutes-Poor

Tips: 1. Do not waste time over questions you are not sure about 2 Give the problems some thought before choosing the answers 3 Read the directions carefully before answering the questions. 4. Do not try to guess the answer

Data Sufficiency Tests

FOR CAT

Having familiarised yourself with the first four sections of the Common Admission Test (CAT), get set to juggle with these Data Sufficiency Tests so as to orient your reasoning abilities, under stress.

Time: 32 minutes

Scores: 1. Give yourself one mark for each correct answer.

2 Deduct one mark for each wrong answer.

Then rate yourself as follows:

Excellent35-40 Very Good... ..29-34 Good ...23-28 Fair 17-22 Poor.....Below 17.

DIRECTIONS For each of the following questions tick mark the choice that best answers the questions. Answers are given at the end of this test

Directions Each given question is followed by two statements numbered (1) and (2). You have to determine whether the data given in the statement/s is sufficient to answer the question and choose one among the five possible answer choices given below

(A) If statement (1) alone is sufficient to answer the question but statement (2) alone is not sufficient,

(B) If statement (2) alone is sufficient to answer the question but statement (1) alone is not sufficient,

(C) If both the statements (1) and (2) are needed together to answer the question but neither statement alone is sufficient,

(D) If each statement by itself is sufficient to answer the question,

(E) If neither statement is sufficient as they do not have sufficient data to answer the question

1 Find the value of angle a in the given diagram.

- (1) $a = b$
- (2) $a = 2$

2 In triangle ACB, find y if $AC = 10$ cm and $z = 40^\circ$

- (1) Angle $ACB = BDE$
- (2) $BC = 10$ cm

3 In an industry there are two parallel trade unions—one pro-management and the other anti-management—called A

and B respectively. How many employees belong to union A?

- (1) Union B has 180 members
- (2) All members of union A are also members of union B

4 Are lines AB and CD parallel?

- (1) $y + x = 180^\circ$
- (2) $x = y$

5 Find angle CBD in the given diagram

- (1) Angles CBD BCD
- (2) Angles ACD BDC

6 What is the average of w , x , y and z ?

- (1) $3(w + x + y) = 63$ and $z = 3$

- (2) $w + x + y + 20 = z + 4$

7 The above figure has a given line xy containing the centres of three overlapping circles. What is the length of AB (A is the centre of circle I and B is the centre of circle III)

- (1) The length of the segment from P to Q is 80
- (2) The radii of circles, I, II and III are 20, 12 and 16 respectively

8. Which of the two companies A and B, has earned greater profit in 1985?
- Company A has earned a profit equal to 10% of its total profit for 1984
 - Company B has earned a profit equal to 5% of its total earnings of 1984
9. Is $A > B$?
- $(A+B)^2$ is positive
 - A is positive
10. A TV dealer sold three TV sets in a day. How much profit did he earn?
- Each TV set was sold for Rs 8,400
 - He received 10% commission on two sets and 20% commission on the third set
11. Is a positive?
- $a^2 - 1 = 0$
 - $a^3 + 1 = 0$
12. A class of 56 students (30% are boys and 70% girls) scored 90% marks in Economics. How many boys scored 90% marks?
- 10 girls scored 85% marks
 - 50% of the boys scored distinction in Economics
13. Is $AD = CD$ in the figure given here?
- $AB = BC$
 - $\angle BAD = \angle BCD$

14. What is the strength of the school?
- If there are 210 girl students
 - 30% of them are boys
15. Find the perimeter of the triangle.
- The hypotenuse of the triangle is 10
 - Triangle ABC is a right-angled triangle

16. In the above figure, line xy bisects AB at D . Is y equidistant from A and B ?
- $CB = AC$
 - $DB = AD$

17. What is the average rate of motoring of two drivers?
- One drives at 8 km per hour
 - Second covers a distance of 100 km
18. What is the area of the parallelogram AFDE?
- ACDB is a rectangle with an area of 36 inches
 - $FD = DB$

19. Find the length of one side of the square ABCD.
- $CS = 3''$
 - The shaded portion is semicircle of $1/4$ area of the outer

20. In triangle ABC, what is the length of the side AC?
- $AB = 5''$
 - $BC = 6''$

JUMBLED WORDS SENTENCES

Directions: The following questions are based on jumbled spellings. Each letter in the jumbled word has been allotted a serial number according to the sequence in which it

appears in the alphabet. Of the two or more of the similar letters, only one has been numbered. Rearrange the jumbled letters to make meaningful words and find the correct answer choice given under each question.

21. N E I U B T R
4 2 3 7 1 6 5
(a) 1 7 4 2 6 5 3
(b) 6 5 7 2 1 4 3
(c) 6 5 3 1 7 4 2
(d) 5 4 2 1 3 6 5
22. D A J E I L
2 1 5 3 4 6
(a) 2 6 3 5 4 6

DISARRANGED SENTENCES

Directions: In the following questions, you will find disarranged sentences. After arranging the words in the proper order, indicate the sentence which makes sense by using the numbers given under the words:

Example: Man makes perfect a
1 2 3 4

practice

5

The correct answer in this example will be : 5 2 4 1 3

31. Never better is than it late

1 2 3 4 5 6

- (a) 6 5 4 2 1 3
- (b) 3 4 2 1 5 6
- (c) 3 4 2 6 1 5
- (d) 5 3 2 6 4 1

32. With with hunt hold the

1 2 3 4 5

the hounds to hare and

6 7 8 9 10

- (a) 10 9 8 6 5 2 3 4 7
- (b) 7 1 4 5 2 8 9 10 6 3
- (c) 8 4 1 5 9 10 3 2 6 7
- (d) 1 8 4 2 6 7 9 3 10 5

33. Breath blow cold hot the to

1 2 3 4 5 6

in same and

7 8 9

- (a) 6 2 4 9 3 7 5 8 1
- (b) 6 2 4 9 3 7 5 8 1
- (c) 6 2 9 3 4 7 5 8 1
- (d) 1 9 8 7 4 3 2 5 6

34. Grave the in foot have one's to

1 2 3 4 5 6 7

- (a) 7 5 2 6 4 3 1
- (b) 7 4 5 6 2 1 3
- (c) 7 5 6 4 3 2 1
- (d) 3 1 7 5 6 4 7

35. Hand into take to law the one's

1 2 3 4 5 6 7

- (a) 2 5 6 1 3 4 7
- (b) 4 3 5 6 2 7 1
- (c) 7 3 6 2 5 1 4
- (d) 4 3 6 5 2 7 1

36. A dilemma to the horns of be

1 2 3 4 5 6 7

on

8

- (a) 8 6 4 2 1 5 3 7
- (b) 3 2 6 4 5 1 8 7
- (c) 1 2 3 4 5 6 7 8
- (d) 3 6 2 8 1 4 5 7

37. Dog wake to a sleeping up

1 2 3 4 5 6

- (a) 3 6 4 3 1 5
- (b) 3 2 6 4 5 1
- (c) 3 6 2 5 1 4
- (d) 3 6 2 5 1 4

38. Water blood than thicker is

1 2 3 4 5

- (a) 2 5 4 3 1
- (b) 2 5 3 4 1
- (c) 2 4 5 3 1
- (d) 3 1 4 5 2

39. Stile help over the to a dcg

1 2 3 4 5 6 7

lame

8

- (a) 5 2 6 7 4 3 1
- (b) 5 2 7 6 3 4 1
- (c) 5 2 6 7 3 4 1
- (d) 1 4 3 7 6 2 5

40. Sea deep between the the

1 2 3 4 4

devil and

5 6

- (a) 3 2 1 7 5 6 4
- (b) 3 4 5 6 7 1 2
- (c) 3 4 2 1 7 5 6
- (d) 3 4 6 7 5 2 1

E.T.

ANSWERS

1. (E) Statements (1) and (2) together are not sufficient. $c=d$ (being verticle angles). $a+b+c=d+e+f$ because sum of a triangle is 180° . This means $a+b=e+f$. Based on the statements, we have $a+a=e+a$. So $e=a$.
2. (B) Statement (2) alone is sufficient, since $BC=10$ and $AC=10$. Therefore $BC=AC$ which implies $xz=40$. Since the sum of a triangle $=180$, $y=100$. Triangle BDE has nothing to do with the problem.
3. (E) By taking both the statements into account, we arrive at the answer that in union A there should be 180 members.
4. (B) By statement (2) $x=y$. Therefore their verticle angles are also equal which are alternate interior angles. Hence the lines are parallel.
5. (A) Statement (1) is sufficient because triangle has sum of 180° . Angle $BDC=90$ and $BCD=CBD$, i.e., 45 each. $180-90=90-45=45$.
6. (A) Average of four terms can be computed by making their total which is given in statement (1), i.e.,
 $3(w+x+y)=63$ and $z=3$
 $w+x+y=21$ and $z=3$
 $w+x+y+z=23$. Hence average is 6.
7. (C) From statement (2) the dia. of circles I and III are around 32 respectively. From statements (1) the length from PQ is 80. Hence the distance from circle I to II is $80-72$ or 8. To find length of AB, $20+8+16=44$.
8. (E) The base "amount" of profit is not expressed in any of the statements.
9. (E) Statement (1) tells us nothing about relative values of A+B except that (A+B) is

positive. Statement (2) gives no additional information.

10. (C) Both statements together give us the answer.
11. (B) As per statement (1) a equals 1 or -1 so it does not give complete data. According to (2) a equals -1 so it by itself is sufficient to answer the question.
12. (E) Both the statements do not give us information to solve the problem.
13. (C) Both (1) and (2) are needed to solve the problem. If $\angle BAD$ and $\angle BCD$ are right angles, they are equal. $\angle BAC$ equals $\angle BCA$. Since they are base angles of an isosceles triangle. Subtracting equals from equals, $\angle DAC$ equals $\angle DCA$. Therefore ACD is an isosceles triangle and $AD=CD$.
14. (C) By statement (2) if 30% are boys, 70% left should be girls. From statement (1) let x be the number of students.
 $.70x=210$
 $70x=21,000$
 $x=3,000$
15. (E) From both statements together one side of the triangle is known. Hence perimeter cannot be determined from the data given.
16. (A) By statement (1) if $CB=AC$, then any point on a bisector is equidistant from the ends of the line segment.
17. (E) For computing average, we should know how many km are covered by each driver per hour.
18. (E) Let DB increase and CD decrease correspondingly. Area of AFDE can be changed without contradicting either statement. Hence (1) and (2) are not enough to solve the problem.
19. (A) In any case (2) is true. Since the proportions

remain constant, once CS is given, the side of the square can be computed as : $6/(\sqrt{2}-1)$

20. (E) Neither (1) or (2) give us sufficient information. Size of one angle should have been given in one of the statements

Jumbled words/Sentences

21. (c) TRIBUNE
23. (b) GLAMOROUS
25. (d) MAMMOTH
27. (b) SUPERFAST
29. (b) LANGUAGE
22. (d) JAILED
24. (b) HEROINE
26. (d) DECISION
28. (b) REASONING
30. (a) TRANSPORT

Disarranged sentences

31. (d) It is better late than never
32. (c) To hold with the hare and hurt with the hounds
33. (b) To blow hot and cold in the same breath
34. (c) To have one's foot in the grave
35. (d) To take the law into one's hand
36. (c) To be on the horns of a dilemma
37. (b) To wake up a sleeping dog
38. (a) Blood is thicker than water
39. (c) To help a lame dog over the stile
40. (d) Between the devil and the deep sea

BSRB (PO) Exam, Dec '84

GENERAL AWARENESS

Questions published in this section appeared in the General Awareness paper of the BSRB (PO) Exam, held on Dec 30, 1984. The questions are based on the candidates' memory as they are not permitted to take papers out of the exam hall. Though we have compiled these questions as close to the original as possible we take no responsibility for the discrepancies which may have crept in.

DIRECTIONS: For each of the following questions, tick mark the choice that best answers the questions. Answers are given at the end of these tests.

1. Which of the following is a water-borne disease?
(a) Malaria (b) Cholera
(c) Typhoid (d) None of the above
2. Myopia is a disease of the
(a) Ear (b) Nose
(d) Heart (d) None of the above
3. Dadra & Nagar Haveli are located in
(a) Maharashtra (b) Gujarat
(c) Karnataka (d) Kerala
(e) None of the above
4. X Asiad will be held in
(a) Bangkok (b) Brisbane
(c) Seoul (d) None of the above
5. Which of the following is both drama and dance?
(a) Bharata (b) Odissi
(c) Kathakali (d) None of the above
6. North-South dialogue refers to the talks between
(a) The countries of North and South America
(b) The developed countries and the Third World
(c) The countries of Europe and Africa
(d) North and South Korea
(e) None of the above
7. The Prime Minister of India should not be less than _____ of age.
(a) 30 years (b) 35 years
(c) 25 years (d) 40 years
(e) None of the above
8. Which of the following is known as the 'Evening Star'?
(a) Saturn (b) Mars
- (c) Venus (d) Mercury
(e) None of the above
9. Arya Samaj was founded by
(a) Dayanand Saraswati (b) Swami Vivekanand
(c) Raja Ram Mohan Roy (d) Ram Krishna Paramhansa
(e) None of the above
10. Which Indian state has two capitals?
(a) MP (b) Himachal Pradesh
(c) J & K (d) None of the above
11. Which of the following is the function of iron in the human body?
(a) It makes our bones sturdy
(b) It helps in the clotting of blood
(c) As red blood cells die, iron with the help of copper converts itself into haemoglobin
(d) None of the above
12. The smallest continent of the world in terms of territory is
(a) North America (b) Europe
(c) Australia (d) None of the above
13. Magsaysay Awards have been instituted to perpetuate the memory of the President of
(a) New Zealand (b) Mauritius
(c) The Philippines (d) Malaysia
(e) None of the above
14. Mixed economy means (the)
(a) Coexistence of the private and the public sector
(b) Least taxation by the government on the private sector
(c) Extensive exports by the public sector undertakings
(d) None of the above
15. Caspian Sea lies between
(a) USSR and Turkey (b) USA and Canada
(c) USSR and Iran (d) None of the above
16. The biggest producer of apples in India is
(a) J & K (b) Karnataka
(c) Himachal Pradesh (d) None of the above
17. Which of the following is the oldest dynasty?
(a) Maurya (b) Chola
(c) Chalukya (d) Nanda
(e) None of the above
18. The capital of Gujarat is
(a) Surat (b) Baroda
(c) Ahmedabad (d) Gandhinagar
(e) None of the above
19. Which of the following is found in abundant measure in India?
(a) Uranium (b) Thorium
(c) Tungsten (d) None of the above
20. Which country is known as the 'Land of the Midnight Sun'
(a) Sweden (b) Netherlands
(c) Iceland (d) Japan
(e) None of the above
21. The language spoken by the largest number of people is
(a) English (b) French
(c) Chinese (d) Arabic
(e) None of the above
22. When Vasco da Gama reached India in 1498 the ruler of India was:
(a) Babar (b) Ibrahim Lodhi
(c) Chandragupta Maurya (d) None of the above
23. The 45th Constitutional Amendment extends the provision of reservation in government jobs for SCs and STs by
(a) 10 years (b) 15 years
(c) 30 years (d) 40 years
(e) None of the above
24. Citius, Altius, Fortius is the motto of
(a) Asian Games (b) Commonwealth Games
(c) Olympic Games (d) None of the above
25. The Indian Institute of Forest Management is located in
(a) Nainital (b) Simla
(c) Dehra dun (d) None of the above
26. Maginot Line lies between

- (a) USSR and Poland
(b) France and West Germany
(c) USA and Canada
(d) North Korea and South Korea
(e) None of the above
27. Maximum cashewnut is grown in which of the following states?
(a) Kerala (b) Tamil Nadu
(c) Gujarat (d) Karnataka
(e) None of the above
28. New Zealand lies to the — of Australia.
(a) North-west (b) South-east
(c) North-east (d) None of the above
29. Which film received the UNESCO Solidarity Award for 1984?
(a) *Arth* (b) *Mrigya*
(c) *Ardh Satya* (d) *Paar*
(e) None of the above
30. The largest wool producing country in the world is
(a) Australia (b) USSR
(c) USA (d) South Korea
31. When cream is removed from milk the density of milk
(a) Increases (b) Decreases
(c) Remains the same (d) None of the above
32. P.T. Usha is associated with
(a) 400 m hurdles (b) 800 m
(c) 3,000 m (d) None of the above
33. With which of the following rivers is Silent Valley associated?
(a) Cauveri (b) Krishna
(c) South Periyar (d) None of the above
34. The Sarnath Lion Capital of Ashoka, the State Emblem of India, is kept at (the)
(a) National Museum
(b) Sarnath Museum
(c) Archaeological Survey of India
(d) None of the above
35. Which of the following is an international air carrier?
(a) Vayudoot (b) Indian Airlines
(c) Air India (d) None of the above
36. Which bank, before the creation of

AUTHORS NOTE

Here is the author's reply to the readers' queries on the *Mathematical Ability* section of Practice Tests on *How To Tackle CAT-I* (Sep '85).

Q.9 should have read as, "which of the following equations does not have a solution in rational number." In the fifth line of solution to Q. 19, it should be $3/6x$ instead of $2/6x$.

In Q.23, the correct expression is $3\sqrt{-1}$

and in Q.27, there should be a comma instead of a dot between 0 and 3 in the expression 0, 3 and 5----. The correct answer to Q.30 is 2256.

- the RBI in 1935, was functioning as the central bank of the country?
(a) Indian Bank (b) Imperial Bank
(c) Bank of Baroda (d) Punjab National Bank
37. The Meghdoot Award is given for outstanding services in
(a) AIR (b) Literature
(c) Journalism (d) Posts and Telegraphs
38. We use diamond, as an ornament because
(a) It has a high refractory index
(b) It reflects light more than any other metal
(c) It is the purest form of carbon
(d) None of the above
39. Panna Lal Ghosh is associated with
(a) Tabla (b) Sarod
(c) Shehnai (d) None of the above
40. Which of the following groups of languages is written vertically?
(a) Greek, Latin, Spanish
(b) Chinese, Japanese, Khmer
(c) Uzbek, Chinese, Pakhto
(d) None of the above
41. Which of the following programmes has been launched with a view to raising the poorest families in the rural areas above the poverty line?
(a) Integrated Rural Development Programme
(b) Training Rural Youth for Self-Employment
(c) Command Area Development Authority
(d) None of the above
42. Brain drain refers to
(a) Migration of talent to an alien country
(b) Widespread illiteracy

- (c) Use of science and technology for destructive ends
(d) None of the above
43. Davis Cup is associated with
(a) Hockey (b) Football
(c) Lawn tennis (d) Badminton
44. Who is popularly known as the 'Nightingale of India'.
(a) Lata Mangeshkar (b) Sarojini Naidu
(c) Florence Nightingale (d) Asha Bhonsle
45. The newspaper *People's Daily* is published from
(a) China (b) New York
(c) Pakistan (d) South Korea
46. The Five Rathas Temples in Mahabalipuram were built by the
(a) Chola rulers (b) Chalukya rulers
(c) Pallava rulers (d) Chandella rulers
47. Who received the Nobel Prize for Literature for 1984?
(a) William Golding (b) Jaroslav Seifert
(c) Richard Stone (d) Bruce Merrifield
48. Who was the first Vice President of India?
(a) S. Radhakrishnan (b) V.V. Giri
(c) Zakir Hussain (d) Rajendra Prasad
49. The garba has its origins in
(a) Maharashtra (b) Gujarat
(c) MP (d) UP

BY THE AARBEEES

FOR NDA, SBI POs, SSC CLERKS GDE...

The following questions have been formulated for those appearing in the forthcoming NDA, SBI POs and SSC (Clerk's Grade) Exams.

DIRECTIONS: Tick mark the choice that best answers each question. Answers with explanations appear at the end of this test.

READING COMPREHENSION

1 Read the following passage and answer the questions that follow:

The other day my mother, who is still actively in practice as a gynaecologist, asked me how a patient of hers could be helped to do something about her old Mum who used to go dotty in the afternoons and upset everyone in the house. Similarly, three

or four times each year my telephone rings and somebody wants advice about help with an elderly relative who is becoming too great a load on the modern household. Too great a load not necessarily because of lack of will to help or sympathy, but because houses and flats are too small, everyone quite reasonably goes out to work, and domestic help is non-

existent. In Scandinavia they do these things much better by having day and night clinics attached to housing estates.

These requests for help and information brought home to me the fact that I really knew very little about this aspect of the social services, both in terms of what is available physically and what facilities exist to give financial support to those who genuinely need it. Through a relatively new and remarkably sensible organisation called the Elderly Invalids' Fund, I was able to find out a great deal more about the problem and one kind of solution.

Mrs Y is aged eighty-six and until recently was able to do a little work as an office cleaner. She had outlived all her close relatives but had a room in the house of her sister-in-law, who apparently disliked her intensely. In addition the son of the house, a person of low IQ and distressing behaviour, used to terrorise the poor lady so much that she stayed out of doors all day just to be out of the way. Another of her difficulties was that 'they' would not let her use the nearby lavatory, but made her go to the one outside. All this in spite of the fact that she paid rent.

Mrs Y had one friend who worked in the office she cleaned. This friend had her for occasional weekends and holidays and she was invited for Christmas 1963. So fearful was she of going home and so kind was the friend that she stayed ten months. Her visit was terminated by a very severe attack of pneumonia which took her to the hospital.

Her pneumonia was complicated by a senous vein thrombosis, but when she got over this she, as we say in medical circles, 'turned her face to the wall' and lost all interest in life. The ward sister, who is a cheerful genius, suddenly realised while trying to get her to eat some lunch one day, what the trouble was. "If I promise you that you will never go back to that place" sister said, "will you get better, Mrs Y?" She immediately sat up and ate two helpings of pudding. From that moment she never looked back and when I saw her in the ward three days before she went off to a residential home in Hertfordshire, called Walnut Tree House, she told me proudly how she had been out shopping all by herself and how much she was looking forward to her new life.

The kind and knowledgeable Almoner, who took me to meet Mrs Y and the ward sister, said that the home, which would cost seven-and-half guineas a week, was being paid for by her old age pension, the Assistance

Board and the Elderly Invalids' Fund. This meant that she would also have quite enough money for clothes and outings.

- This article has been written by
 - a social reformer
 - a doctor
 - an elderly invalid
 - a young lay man
- The most likely meaning of the phrase 'to go dotty' could be
 - to become slightly mad
 - to feel a bit sleepy
 - to sink into unconsciousness
 - to start using abusive language
- The author regards the neglect of the old as something
 - not to worry about
 - caused by lack of feeling
 - of censure against social services
 - directly connected with the situation of the modern household
- The most appropriate description of Mrs Y's plight at her sister-in-law's can be expressed by the word
 - pathetic
 - cruel
 - inconsiderate
 - desperate
- After she had got over her pneumonia and vein thrombosis, Mrs Y. needed
 - friendly attention
 - sympathetic attitude
 - psychological treatment
 - good things to eat
- The best heading for the above passage is
 - psychology of the old
 - looking after old people
 - need for more social services
 - the old and their diseases

PRECIS WRITING

II Write a precis of the following passage:

If there is one fact more than any other which stands out in the history of science, it is the remarkable extent to which great discoveries and youthful genius stand associated together. Scores of instances can be quoted in support of this proposition. Indeed, if one were to attempt to write a treatise on any branch of science in which all discoveries made by youthful workers were left out, there would be very little left to write about. The fact of the matter appears to be that, other things being the same, the principal requisite for success in scientific research is not the maturity of knowledge associated with age and experience, but the freshness of outlook which is the natural attribute of youth. The conservatism which develops with increasing age is thus revealed as a factor which militates against great achievement in science. The great ideas seem to come most easily to youthful minds. Since,

however, much time is required to work out a new idea properly and fully, age and experience are not altogether useless in science. Up to a certain point, the conservatism bred by age may even be useful as a brake on the wilder flights of youthful imagination. Further even the elderly may, if they so choose, retain and cherish a youthful spirit and outlook. So long, therefore, as they do not allow the conservatism of age to function as a suppressor of youthful genius, the elderly may continue to find themselves useful as guides and inspirers of research. On this view, indeed, the principal function of the older generation of scientific men is to discover talent and genius of the younger generation and to provide ample opportunities for its free expression and expansion.

SYNONYMS

III Choose the best alternative.

- PORNOGRAPHY
 - pencil drawings and sketches
 - description of sexual and erotic feelings
 - X-ray photography of the brain
 - writing in an ancient script
- REPRIEVE
 - postpone execution
 - grant pardon
 - make a petition
 - recover lost ground
- SCARE
 - strike hard
 - conceal
 - see clearly
 - frighten
- FEMUR
 - brain fever
 - sweet water fish
 - thigh-bone
 - baby talk
- NUMISMATIC
 - of coins
 - wandering
 - primitive
 - experimental

ANTONYMS

IV Choose the best alternative:

- PERILOUS
 - easy
 - comfortable
 - safe
 - peaceful
- CROOKED
 - chaste
 - unbending
 - straight
 - pious
- PLENITUDE
 - incompleteness
 - restlessness
 - disturbance
 - necessity
- ILLICIT

- (a) liberal
(b) intelligent
(c) lawful
(d) religious
5. SENILE
(a) sensible
(b) youthful
(c) intelligent
(d) bright

IDIOMS

V Choose the best answer:

1. A pig-headed person is one who is
(a) foolish
(b) cowardly
(c) obstinate
(d) dull
2. To be woolgathering means to be
(a) absent-minded
(b) thoughtless

- (c) sleepy
(d) busy
3. Leaving the gate unlocked was a hare-brained thing to do. Here hare-brained means
(a) brave
(b) mischievous
(c) foolish
(d) irrational
4. Hide-bound parents are those who are
(a) home-sick
(b) too conventional
(c) pretentious
(d) insincere
5. To get something off one's chest is to
(a) discuss a worry
(b) make a declaration
(c) disclose
(d) cough loudly

SPOTTING ERRORS

VI Spot the errors if any:

1. He said that it ^aneeded ^bseveral porters to carry ^call his ^dluggages. ^eNo error
2. It is a ^ageneral opinion that that ^bgirl is very high ^cfor her age. ^dNo error
3. In his ^ayounger days he was used to do a ^bgood deal of baby-sitting on ^cweekends. ^dNo error
4. No sooner ^ahad we set out ^bwhen a thunder storm ^coccurred and the whole countryside ^dlit up. ^eNo error
5. ^aEven when ^bpressed hard she ^cdenied to say where she ^dhad hidden the ring. ^eNo error

ANSWERS

BSRB PO Exam, Dec 1984

- (b)
2. (d) Myopia is a disease that affects the eyes. A person suffering from this disease cannot see distant objects.
3. (d) They are located in Gujarat but are a Union Territory.
4. (c) The X Asiad will be held in Seoul, South Korea (official name Republic of Korea) in September-October 1986.
5. (c)
6. (b) Talks between the North and South are also referred to as talks between developed and under developed countries.
7. (c) An Indian citizen of 25 years and above can contest Lok Sabha elections. By established convention the Prime Minister should be a member of the Lok Sabha.
8. (c)
9. (a) Arya Samaj was established on Apr 10, 1875 in Bombay by Swami Dayanand Saraswati (1824-1883)
10. (c) Srinagar is the summer capital while Jammu is the winter capital of J & K.
11. (c)
12. (c) Australia's area: 2,974,581 sq km; Europe's area: 3,754,000 sq km; North American's area: 8,440,000 sq km.
13. (c) 14. (a) 15. (c) 16. (c)
17. (d) The Nanda Dynasty was founded in 362 B.C., the Maurya dynasty in 323 B.C. and the Chola Dynasty in 1st century A.D.
18. (d) 19. (b) 20. (a)
21. (c) About 700m people speak Chinese.
22. (d) Sikander Lodhi (1489-1517) ruled India when Vasco-da-Gama reached India.
23. (a) From January 1980 to January 1990.
24. (c) These are Latin words coined by Father Didon, a French educationist in 1895. In English it means swifter, higher and stronger.
25. (c)
26. (b) Zone of French fortification which was created by France on the Franco-German border before World War II. It is named after the French Minister of War, Andre Maginot (1877-1932).
27. (a) 28. (b) 29. (d) 30. (a) 31. (b) 32. (a)
33. (d) The initial plan was to construct a 120 Mw hydro-electric project on the Kuntipuzha river in the silent Valley on the slopes of Western Ghats in the Palghat

district of Kerala. The plan, however, was shelved.

34. (b)
35. (c) Indian Airlines operates in India and in neighbouring countries like Sri Lanka, Pakistan, Nepal, Burma, Afghanistan and Maldives Islands. Vayudoot operates in the country linking up small cities with big ones.
36. (b) 37. (d) 38. (d)
39. (d) Late Panna Lal Ghosh was a leading flute player of the country.
40. (b) 41. (a) 42. (a) 43. (c) 44. (b) 45. (a)
46. (c) Pallavas ruled from 600 A.D. to 850 A.D. in South India.
47. (b)
48. (a) Radhakrishnan was Vice-President from 1952-62; Zakir Hussain from 1962-67; and V.V. Giri from 1967-69
49. (b)

English

- I 1(b); 2(a); 3(d); 4(a); 5(c); 6(b).
- II The most significant thing in the history of science is the close connection between talented youth and great discoveries. There is plenty to prove that successful scientific research needs fresh ideas which the young have rather than the ripe experience that the old have. This is because age breeds conservatism which is an enemy of new ideas. Of course it is possible to be old in age but young in spirits. Not only that, old scientists uncorrupted by conservatism can discover and encourage youthful talent and thus contribute to scientific research.
- III 1(b); 2(a); 3(d); 4(c); 5(a)
- IV 1(c); 2(c); 3(a); 4(c); 5(b)
- V 1(c); 2(a); 3(c); 4(b); 5(a)
- VI 1(d); 2(c); 3(b); 4(b); 5(c)

THE HUMAN MACHINE

There are 45 miles of nerves in the skin of a human being. An average human scalp has 1,00,000 strands of hair. It takes 17 muscles to smile and 43 muscles to frown. The muscle of the human jaw exerts a force of over 220 kg. The average person consumes about one tonne of food and drink every year. The skin of the adult human body weighs about six pounds. To get rid of 1 lb of fat, you would have to walk 34 miles. Walking fast uses eight times as many calories as sitting. Two-third of the body's weight is water.

Quantitative Aptitude

BY KAVITA KAPOOR & B.L. ARORA

FOR NDA, SBI (POs), SSC CLERKS' GDE EXAMS...

The following questions have been formulated for those appearing in the forthcoming NDA, SBI (POs) and SSC (Clerks' Grade) exams.

DIRECTIONS: Tick mark the choice that best answers each question. Answers with explanations appear at the end of this test.

1. $\left(\frac{1}{25}\right)^{-\frac{3}{2}}$ is equal to
(a) $\frac{1}{125}$ (b) $25\sqrt{5}$
(c) $\frac{1}{25\sqrt{5}}$ (d) 125
2. $6\sqrt{27x^3} + 3\sqrt{-27x^3}$ is equal to
(a) $3\sqrt{27x^3}$ (b) $3\sqrt{-27x^3}$
(c) $3\sqrt{3x-3x}$ (d) $(3x)^3 + \sqrt{-3x}$
3. 1. is equal to $\frac{1+1}{1+1}$
(a) $\frac{1}{2}$ (b) $\frac{2}{1}$
(c) $\frac{1}{1}$ (d) $\frac{1}{2}$
4. 25 is — % of $166\frac{2}{3}$
(a) 12.5 (b) 15
(c) 18 (d) $20\frac{2}{3}$
5. $27^{-\frac{2}{3}} + 256^{\frac{3}{4}}$ is equal to nearly
(a) 9.15 (b) 192.72
(c) 64.11 (d) 88.86
6. $0.9 \times 0.0066 \times 0.096$ is equal to 0.000022×0.36
(a) 72 (b) 7.2
(c) 0.072 (d) 0.72
7. The value of 93^2 is equal to
(a) 8649 (b) 8469
(c) 8869 (d) 8249
8. If $a^2 + b^2 = ab$, the value of $\frac{a}{b}$ (—) is equal to
(a) 28 (b) 12
(c) 76 (d) 92
9. The value of the expression $28 - (12) - (-3) \div 6 + (-4) - (-3)$ is equal to
(a) 46 (b) 22
(c) 16 (d) 10
10. The average measure of the angles of a triangle is
(a) Maximum for a right angled triangle
(b) Maximum for an obtuse angled triangle
(c) Minimum for an acute angled triangle
(d) Same for all the triangles
11. A triangle having its angles in the ratio — cannot be a right angled triangle.
(a) 1:1:2 (b) 1:2:3
(c) 2:4:6 (d) 1:3:6
(e) Any of the above.
12. The number 17065423968 is divisible by
(a) 4 (b) 6
(c) 8 (d) 16
(e) All of the above
13. The average age of the four members of a family is 19 years. After 2 years, their average age will increase by nearly
(a) 8% (b) 10.5%
(c) 11.2% (d) 12.8%
14. The average measure of the sides of a rectangle is 7 cm. If the area of the rectangle is 40 cm², the difference between its length and breadth is
(a) 4 cm (b) 5 cm
(c) 6 cm (d) 7 cm.
15. Consider the fractions $\frac{2}{3}, \frac{5}{6}, \frac{1}{2}, \frac{1}{3}$. The difference between the sums of the two largest and two smallest fractions is
(a) $\frac{1}{6}$ (b) $\frac{1}{3}$
(c) $\frac{1}{2}$ (d) $\frac{1}{3}$
16. The difference between simple interest and compound interest for 2 years at 10% per annum will be Rs 35 on a sum of
(a) Rs 350 (b) Rs 1,400
(c) Rs 2,700 (d) Rs 3,500.
17. A given sum doubles at compound interest in five years. After another two and a half years, the amount will become nearly — times the given sum
(a) 3 (b) 2.84
(c) 4 (d) 2.42
18. A man deposits Rs 20,000 in a fixed deposit in a private company at 15% simple interest, while his friend deposits it in a post office account at 12% compound interest for three years. If the company deducts 10% income tax on the interest, who gets more and how much?
(a) Man, Rs 376.50
(b) Man, Rs 736.50
(c) Friend, Rs 524
(d) Friend, Rs 245
19. A number of friends decided to go on a picnic and planned to spend Rs 96 on eatables. Four of them, however, did not turn up. As a consequence the remaining ones had to contribute Rs 4 each extra. The number of them who attended the picnic was
(a) 24 (b) 16
(c) 12 (d) 8
20. If I walk to school at 3 km/hr, I reach 10 minutes earlier than when I walk at 2 km/hr. The distance of the school from my house is
(a) 0.5 km (b) 1 km
(c) 1.5 km (d) 2 km
21. An alloy contains 430 gms of copper, 80 gms of zinc and 50 gms of lead. The percentage of zinc in the alloy is nearly
(a) 19.27 (b) 16.36
(c) 14.28 (d) 12.16
22. A dealer wants to earn a profit of 20% on an item after offering a discount of 10% on the list price. He should list the article at — % of the cost price.
(a) 136.25 (b) 133.33
(c) 132.00 (d) 127.75
23. A ball bounces upto 2.5 m on the first bounce. If its bounce reduces by 20% on every successive bounce, at the fourth bounce, it will rise to a height of —
(a) 1 m (b) 1.05 m
(c) 1.12 m (d) 1.2 m
24. If $PV^{1/4} = 16$, $PV^{3/4}$ will be
(a) 256 (b) 36/P
(c) 256/P (d) 36/P
25. A profit of 24% on the cost price of an article is equal to a profit of — on the selling price.
(a) 27.6% (b) 23.8%
(c) 21.4% (d) 19.3%
26. A sewing machine dealer offers a sewing machine listed at Rs 750 at a cash discount of 10% or at 20% down payment and the balance in six monthly instalments of Rs 100 each. By accepting the instalments payment scheme, he is paying an interest of nearly — % per annum.
(a) 64 (b) 43

- (c) 33 (d) 24
27. If two successive discounts of 10% and x% are equivalent to a single discount of 23.5%, the value of x is
 (a) 12.5 (b) 13.5
 (c) 15 (d) 16.5
28. If AB is equal to R and the shaded area is equal to A, the radius of the inner circle is equal to
 (a) $R - A/\pi$ (b) $R^2 - A/\pi$
 (c) $(R - A/\pi)^2$
 (d) None of these

29. If the price of a radio set including 7% sales tax and Rs 15 licence fee is Rs 496.50, the amount of sales tax is
 (a) Rs 35.50 (b) Rs 33.25
 (c) Rs 31.50 (d) Rs 28.70
- Table A gives the comparative progress in drinking water supply of Kerala during the periods 1956-1982 and 1982-85. Answer questions 30-33 after carefully studying the table
30. The average number of problem villages per year increased during the second interval by nearly
 (a) 6% (b) 9%
 (c) 540% (d) 900%.
31. The total financial assistance obtained from various sources in the second span was more than in the first span by
 (a) 476.36 lakhs
 (b) 467.36 lakhs
 (c) 368 lakhs
 (d) 297.26 lakhs
32. The number of tube wells drilled for non-Harijans during 1982-85 was _____% of the total number of tube wells drilled.
 (a) 34% (b) 56.8%
 (c) 65.8% (d) 68.6%
33. The average money spent per person per year during 1956-85 (assume all the money is obtained only from various sources given) is nearly
 (a) Rs 76 (b) Rs 97

TABLE A
Comparative Progress At A Glance

	During 25 years (1956-'82 May)	During 3 years (1982 June-'85 May)
No. of problem villages covered	557	591
No. of people covered : Rural	42 lakhs	58 lakhs
Urban	29.99 lakhs	3.71 lakhs
No. of tube-wells drilled	113	3,800
Tube-wells drilled exclusively for Harijans/Girijans	—	1,300
Percentage of people covered	28.28% (of total population)	28%
Harijan/Girijan schemes completed	222	353
Financial assistance obtained from Central Government	Rs 1,657.70 lakhs	Rs 3,695.35 lakhs
LIC	Rs 3,334.58 lakhs	Rs 1,370.05 lakhs
Foreign governments		Rs 295.24 lakhs

- (c) Rs 214 (d) Rs 752
- The railway finances during the year 1977-78 to 1984-85 are shown in the graphs in the figure. Answer questions 34-36 with reference to these graphs.

34. The difference between gross traffic receipts and total working expenses was minimum during the year
 (a) 1979-80 (b) 1980-81
 (c) 1983-84 (d) 1984-85
35. During 1982-83, the net revenue was nearly _____% of the gross traffic receipts
 (a) 8 (b) 10
 (c) 11.5 (d) 12.5
36. From 1977-78 to 1980-81, the total working expenses increased by nearly
 (a) Rs 400 crore
 (b) Rs 600 crore
 (c) Rs 720 crore
 (d) Rs 800 crore
37. The marks obtained by Rakesh in Physics and Chemistry are in the ratio of 4:3 whereas the marks obtained by him in Physics and Mathematics are in the ratio 5:6. If he obtains 60 marks in Chemistry, his score in Mathematics is
 (a) 88 (b) 92
 (c) 96 (d) 98
38. The ratio between the numerator and denominator of a number is 3:7. If the difference between the denominator and numerator is 12, their sum will be
 (a) 10 (b) 22
 (c) 26 (d) 30
39. If Aug 15, 1947 was a Friday, Aug 15, 1997 would fall on a
 (a) Friday (b) Sunday
 (c) Wednesday (d) Monday
40. If May 5, 1969 was a Monday, the next time May 5 was a Monday was in the year
 (a) 1974 (b) 1975
 (c) 1976 (d) 1977
41. Which of the following is not well defined?
 (a) n^0 (b) o/n
 (c) oxn (d) n/o
42. A bag contains Rs 58,000 in the form of Rs 10, Rs 20 and Rs 100. notes in the ratio 2:3:5. The number of Rs 20 notes in the bag is
 (a) 200 (b) 300
 (c) 400 (d) 800
43. After spending 80% of his salary, a man saves Rs 250. If his expenditure becomes 85% of his salary, his saving would reduce to
 (a) Rs 200 (b) Rs 187.50
 (c) Rs 162.50 (d) Rs 150

ANSWERS

1. (d) The given expression is $\left[\left(\frac{1}{25}\right)^{\frac{1}{2}}\right]^{-3} = \left(\frac{1}{5}\right)^{-3} = 5^3 = 125$
2. (c) $3\sqrt{27x^3} = 3x$. Thus the given expression is equal to $3\sqrt{3x} + (-3x)$
3. (b) Starting from bottom, the given expression becomes $\frac{1}{1+1} = \frac{1}{1+\frac{1}{2}} = \frac{2}{3} = \frac{7}{12}$
4. (b) Let $25 = \frac{x}{100}$ of $\frac{500}{3}$
Thus $x = 15$.
5. (c) $\left[(27)^{\frac{1}{3}}\right]^{-2} + \left[(256)^{\frac{1}{4}}\right]^3 = \frac{1}{9} + 64 = 64\frac{1}{9}$
6. (a) The total number of digits after the decimal is eight in both numerator and denominator. The decimals and zeros immediately following these may, thus, be omitted.
7. (a) $93^2 - 7^2 = (93+7)(93-7) = 8600$
 $\therefore 93^2 = 8649$
8. (c) $6^2 \cdot (-4)$ is equal to $6^2 + 4^2 - (6)(-4) = 36 + 16 + 24 = 76$
9. (a) The given expression becomes $28 + 36 \div 6 + 12 = 28 + 6 + 12 = 46$
10. (d) The average measure is 60° for all triangles.
11. (d) The angles in this case will be $18^\circ, 54^\circ, 108^\circ$. In all other cases, one of the angles is 90° .
12. (e) The last two digits (68) are divisible by 4, the last three by 8 and the last, four by 16, so the number is also divisible by these. Since the sum of the digits is divisible by 3, the number is divisible by 6 ($= 2 \times 3$) also.
13. (b) % increase = $\frac{\text{Increase}}{\text{Total age}} \times 100 = \frac{8}{76} \times 100 = 10.5\%$
14. (c) Average side = $\frac{1+b}{2} = 7 \therefore 1+b=14$ —(i)
Hence $(1-b)^2 = (1+b)^2 - 41$ $b = 196 - 160 = 36 \therefore 1-b = 6$ (ii)
Adding (i) & (ii), $1 = 10$ and thus $b = 4$.
Thus $1-b = 10-6 = 4$ cm.
15. (b) $\left(-\frac{8}{9} + \frac{11}{12}\right) - \left(\frac{3}{4} + \frac{5}{6}\right) = \frac{65}{36} - \frac{19}{12} = \frac{8}{36} = \frac{2}{9}$
16. (d) On Rs 100, the difference is (Rs 121—Rs 120) = Re 1. Therefore, the difference will be Rs 35 on Rs 3,500.
17. (b) Since amount = Principal $\left(1 + \frac{R}{100}\right)^t$
 $2P = P \left(1 + \frac{R}{100}\right)^5$
Thus, $\left(1 + \frac{R}{100}\right)^5 = 2$ or $\left(1 + \frac{R}{100}\right)^{2.5} = \sqrt{2}$
 $A = P \left(1 + \frac{R}{100}\right)^{7.5} = \sqrt{2} (2P) = 2.84 P$
18. (a) Interest earned by man = $20,000 \times \frac{15}{100} \times 3 = 9,000$
- Net interest payable to him after deduction of income tax = $9,000 - 900 = \text{Rs } 8,100$.
Interest payable to his friend = $2,500 + 2,812.50 + 3,164 = \text{Rs } 8,476.50$
19. (d) Let x be the number who decided to go on the picnic. Then $4(96/x) = 4(x-4)$, where the left hand side is the contribution of the four who did not go, and the RHS, the money which the remaining ones had to pay. Solving, we get $x = 12$ Thus, eight of them attended the picnic.
20. (b) If x is the distance in km $x/3 + 1/6 = x/2$ or $x = 1$ km
21. (c) The required percentage is $\frac{14.28}{100} \times 100 = 14.28\%$.
22. (b) If the CP is Rs 100, list price ($L - 10\%$ of L) = 120 or $0.9L = 120$ Thus $L = \text{Rs } 133.33$.
23. (b) The height decreases by $\frac{1}{3}$ of the height on every bounce.
24. (c) $V^{1.4} = 16/P$. $\therefore V^{3.8} = 256/P^2$
Hence $PV^{3.8} = P \cdot 256/P^2 = 256P$
25. (d) The required profit is $24/124 \times 100 = 19.3\%$
26. (b) Cash Price paid = Rs (750—75) = Rs 675.
II Scheme: Down Payment = Rs 150, Monthly product of instalments = $100 + 200 + \dots + 600 = \text{Rs } 2,100$ Interest paid = Rs 75
 \therefore Rate of interest = $\frac{75 \times 100 \times 12}{2,100 \times 1} = 43\%$
27. (c) If S.P. = 100, two successive discounts bring the price to $90 - \frac{90x}{100} = 90 - 0.9x = 76.5$. $\therefore x = 15$.
28. (b) Area of the shaded portion = $\pi R^2 - \pi r^2 = A$. $\therefore \pi R^2 = \pi r^2 + A$ Or $r = \sqrt{(R^2 - A/\pi)}$ where r is the radius of the inner circle.
29. (c) Sales tax = $\frac{1}{100} \times 481.50 = \text{Rs } 31.50$
30. (d) Average number increased from $\frac{197}{100} = 22.3$ to $\frac{197}{100} = 197$ an increase of nearly 900%
31. (c) The difference is (5,360—4,992) lakh = 368 lakh
32. (c) Required percentage = $2,500/3,800 \times 100 = 65.8\%$ 33. (a)
34. (b) The difference is equal to the net revenue which is minimum during 1980-81.
35. (c) Required percentage = $\frac{11.5}{100} \times 100 = 11.5\%$
36. (d) The total working expenses increased from Rs 1,700 crore to Rs 2,500 crore.
37. (c) His marks in Physics = $\frac{1}{3} \times 60 = 80$ and in Mathematics = $\frac{2}{3} \times 80 = 96$
38. (d) $D - N = 12$, $D/N = \frac{1}{3}$
 $\therefore 7N/3 - N = 12$, which means $N = 9$ and hence $D = 21$.
39. (a) There are 50 years between 47 and 97, 13 of these being leap years. The difference in days between the two given dates = $(50 + 13) \times 7 = 497$ days = 71 weeks.
40. (b) Days advance by one day in a non-leap year and two days in a leap year.
41. (d) Division by zero is not well defined.
42. (b) Let the 10, 20 and 100 rupee notes be $2x$, $3x$ and $5x$ respectively.
Then $20x + 60x + 500x = \text{Rs } 58,000$ or $x = 100$
43. (b) 20% of salary = Rs 250. Thus, salary = Rs 1,250
New saving = 15% of 1,250 = Rs 187.50

MASTERING THE VOID

...with the help of man's unfathomable ingenuity. Masterful artistry and a scientific temper, a craving for the unknown have all gone into the making of man's pride in space—the satellites.

BY DR SHIV PRASAD KOSTA

Director, Publications & Public Relations Unit, ISRO

An artificial satellite is a man-made object which is launched into space by rockets to revolve around the earth. The path followed by an artificial satellite in space is named as orbit. The orbits are usually circular or elliptical. Some important orbits are:

Geosynchronous Orbits lie on the equatorial plane and are usually circular. Their altitude above the earth is around 36,000 km and inclination with equatorial plane is within few degrees ($\approx 2^\circ$). Communication satellites are placed in a geosynchronous orbit at a suitable parking slot to suit the mission's objectives. Indian Satellite INSAT-1B is placed at 74°E

Near Earth Orbits can be either circular or elliptical with altitude, under normal conditions, varying from a few hundred kilo meters to about 1000 kms. Their inclination with equator usually varies from 0° to 100° . Satellites, which in orbit, pass over the North and South Poles, are called Polar Orbiting Satellites.

Sun-Synchronous Orbits enable photography of the earth from the satellite under constant illumination condition of the sun. Such orbits have sun angle with respect to the satellite, constant for all the year round. In other words, the satellite crosses any point on the earth at the same local time. This is realised by adjusting the precession rate of the orbital plane equal to that of the diurnal angular change of the earth in its revolution round the sun, i.e. $360^\circ/365 \text{ days} = 0.98^\circ \text{ day}$. This involves suitable choice of orbit altitude and inclination. The precession of orbit plane arises as a natural consequence of the perturbative force arising from the oblate nature of the earth's shape.

Remote sensing satellites are normally placed in near earth orbits, specifically in sun-synchronous orbits. Deep space probes have special orbits normally elliptical in nature and tuned to fly past many planets as per the mission objectives.

For all normal manned missions so far conducted, near earth orbits have been chosen in view of the nature of goals set

for such missions. Typically, manned spacecrafts are placed at orbital altitudes of 300 to 450 kms and inclination (w.r. to equatorial plane) around 50°

Types of Satellites

Satellites may normally be classified into the following categories according to their mission goals:

Scientific Satellites are placed in various orbits to study numerous aspects of space sciences, viz. radio astronomy, plasma physics, cosmology, aeronomy, ionospheric, solar wind, geomagnetic, geodesy, cosmic ray physics, biology, etc.

Communication Satellites are usually placed in geosynchronous orbits or highly eccentric orbits for long distance telecommunication (telephone, telex, television transmission, radio network, etc). Recently, data transmissions have been added to meet emerging requirements for office and other business applications.

Remote Sensing Satellites provide timely and accurate information on various natural resources, both renewable and non-renewable, and environment, which is very important for the planned development of any country. Such information encompasses meteorological, geological, geographical and ecological conditions. With their proven ability for synoptic and systematic acquisition of related data for planners/managers these satellites play a unique role. They are usually placed in near earth orbits (polar/sun-synchronous).

Meteorology Satellites can be placed either in near-earth orbits or in the geostationary orbit to study the meteorological conditions viz. temperature, cloud coverage and their movement, atmospheric pressure, humidity, direction of the wind, etc. Meteosat, Nimbus, NOAA series, etc are some of the examples of these types of satellites

Navigational Satellites are usually placed in the geostationary orbit to help ship navigation, including communications among the ships and between them and

their shore stations. An international system known as INMARSAT takes care of the launch of marisat-satellites and the establishment of associated ground segments.

Deep Space Probes are usually inter-planetary missions including lunar missions meant to acquire the scientific knowledge and scientific parameters (like climatic and surface temperature, etc) of the planets. These are usually exploratory in nature.

Space Shuttles/Space Labs/Space Stations are placed in the low-earth orbits around 200 to 500 kms either manned or unmanned, to carry out experiments relating to remote sensing of the earth, study of the outer space, launch of the spacecrafts into the geosynchronous orbit.

Elements of the Space Mission

Any space mission entails the following: (a) a satellite which consists of the main frame, associated subsystems and application payloads; (b) a rocket to place the satellite into the desired orbit; (c) ground stations for controlling the satellite and data reception; (d) data processing and distribution system for users.

In a generic sense, the above four elements and the inter-linkages amongst them provide the broad framework for any space mission activities.

Satellite Design

The design of a spacecraft system is essentially a multi-disciplinary exercise that encompasses a wide spectrum of technologies. Central to the definition of such a system is the specification of a mission goal or a set of mission goals related usually to the areas of science applications or technology. Once the mission goal is laid down, it is possible to identify a set of interactive technical elements that include on one side, a spacecraft carrying a payload or a set of payloads appropriate to the mission and a compatible launch vehicle system for placing the satellite into a pre-selected orbit and on the other side, a network of ground based data, telemetry, telecommand and tracking systems that serve to receive the data and exercise control over the spacecraft in its orbital phase. The mission normally concludes with a set of activities involving processing, analysis and interpretation of the data obtained from the experiments.

Spacecraft subsystems

The satellite subsystems include structure, thermal control systems, power systems, communication, closed loop control and stabilisation systems, and the payload.

Structural subsystem

This is the mechanical system that holds together the different subsystems of the spacecraft during all the phases of the mission. It can broadly be divided into primary structure, secondary structure and appendages. In case of a manned satellite, the structure should be able to contain artificial atmosphere and be a barrier to outer radiation and micro-meteorites and help in controlling the heat balance between the satellite and the outer space.

Coming to the choice of materials of the structure, the primary consideration is the highest strength to weight ratio. A variety of alloys of aluminium, magnesium, titanium, beryllium and superalloys containing high nickel and cobalt have been used. Composite materials and structures employing honeycomb and sandwich constructions and using fibre glass reinforced plastic and carbon reinforced plastic provide high strength to weight ratio. Special ceramic reflective materials or ablative materials are used for the re-entry system to withstand temperatures of the order of 400°F. The suitability of the structure made of selected materials is carried out by a series of tests that are broadly classified as dynamic and static. The dynamic tests are carried out to find out dynamic characteristics (such as frequencies, mode shapes, damping, transmissibility, dynamic stresses and reflections). The static test simulate study state stresses, strains, deformities, etc.

Thermal Control Subsystem

The thermal control system of a

Anatomy of IRS: Details of technical subsystems of Indian Remote Sensing Satellite scheduled for launch in 1985 from USSR.

spacecraft enables the maintenance of the temperature of the different subsystems, within specified temperature limits, while the spacecraft is in orbit. During its normal operations in space, a near earth orbiting spacecraft receives heat input from the internal operation of the equipment, externally from the sun (140 mW/Cm^2), and in the form of reflected albedo radiation (48 mW/Cm^2) and emission radiation (23 mW/Cm^2) from earth. Further, the spacecraft radiates heat back into space which is at a temperature of about 3°K. The objective of the thermal control design is to realise acceptable equilibrium temperatures for the different systems taking into account various heat inputs and outputs. Realisation of an effective thermal control system involves three major elements. They are design of suitable control system devices, thermal analysis and thermal testing.

The thermal design and analysis is an interactive process of the choice of suitable thermal control elements, passive or/and active, and a preliminary analysis to check in a rough way the validity of the choices and the implementation methodology. This is followed by a detailed analysis wherein the spacecraft is divided into a number of isothermal nodes. Heat balance equations are written for all such nodes and the resulting simultaneous equations are solved by standard numerical techniques on high speed computers. Results from such an analysis help in refin-

ing the implementation methodology.

Final validation of the thermal design is done by actual tests on a thermal mock-up model under simulated space conditions that include vacuum, temperature and solar radiation. The thermal model has the relevant thermal properties of the proposed design such as the configuration, thermal mass distribution, conductance paths, external surfaces, internal dissipation etc.

Manned space systems have additional elements to the thermal regulation, such as, a controlled heat rejection system using a space radiator to achieve satisfactory temperature and humidity control in the cabin.

Power Subsystem

The power subsystem of a satellite supplies electrical power to the entire subsystem of the spacecraft. The wide variety of user equipment requires power to be supplied at a variety of voltage loads, current loads and types, frequencies and degrees of regulation. This, in turn, requires a power conditioning and distribution system. There are a variety of ways by which electrical power can be generated. These include use of solar energy, nuclear reactor, isotopic and chemical energy. These provide the source of energy for photoelectric, electrochemical, thermoelectric, thermionics and dynamic conversion cycles.

Depending on the required power level and the operating life-time, specific choices of the energy source-converter combination are possible. Fractions of a kilowatt have been realised for unmanned missions using primary batteries for short flights and solar cells with secondary batteries for long duration orbital flights. Fuel cells have been employed in Gemini and Apollo programmes for providing power at kilowatt levels for a few days. Future manned systems, such as a manned space station may use dynamic power systems such as Brayton, Rankine or Stirling cycles.

Presently, the most widely employed power source system is the silicon solar cell panels in conjunction with chemical batteries and fuel cells. Chemical battery takes care of the operation of the essential systems in the orbit as well as peak load requirements and is charged in the sunlit portion of the orbit. Considering the charge-discharge cycle requirements, Ni-Cd has been found to be the most suitable with Ag-Zn battery as the next best. Typically, Ni-Cd battery can give 25 W hr/Kg .

A typical power conditioning system of a spacecraft includes converters, regulators, battery charger, power control circuitry and protection devices.

WRITING A PRECIS-1

BY RAGHU BHATNAGAR & RAJUL BHARGAVA
University of Rajasthan, Jaipur

How do you reduce a long, difficult passage to a few words? Under stress. In very little time allowed.

By tackling tough expressions and words in relation to their context. Sifting the important from the unimportant. Dropping all decorative details...

These and more hints on how to successfully attempt this very important section in major exams conducted by banks for Probationary Officers and by LIC and GIC for Assistant Administrative Officers.

Suppose the following passage is given to be read with care and it is then required to be summarised in approximately one-third of its size.

The real choice for the modern man is not between conservative dogmatism and rationalistic modernism, but between a mature and an immature religious faith. Both dogmatism and extreme modernism suffer from the same fundamental error. They overemphasise the intellectual element in religion. Religion can offer no intellectual certainty. It can no longer provide the unified outlook on life which characterised the medieval period. It must leave to science the undisputed right of judgment in all matters of fact which properly fall within her province. Of course religion has its intellectual aspect. The affirmations of experience must be expressed in intellectual terms. Such efforts of interpretation must use the intellectual language of the age, but they can be nothing more than a fumbling effort to explain the inexplicable, to comprehend the incomprehensible. Man's doctrine of God can and must change with changing knowledge, but the spiritual vision of God grows richer and truer for all those who honestly and fearlessly follow the religious way of life. The real need of our times is not intellectual but spiritual. It is the need for a truly spiritual faith which will refuse to cling to any particular beliefs through fear or a desire for comfort or security—a faith that is prepared for change and growth even at the cost of suffering.

The first problem faced by the reader relates to difficult words and ex-

pressions occurring in the passage. In the present case they may be listed as follows:

conservative dogmatism; rationalistic modernism; mature; immature; overemphasise; unified; undisputed; province; affirmations; fumbling; explain the inexplicable; comprehend the incomprehensible; doctrine; to cling to.

Here it is important to note that there are two ways of looking at difficult vocabulary items. One can treat them as isolated words and expressions with fixed dictionary meanings, or, take them as parts of larger construction—clauses, sentence and paragraphs. As the latter, they as much derive their meaning from these larger units (the context) as they contribute to the meaning of these units. The key to understanding or comprehension—and without prior comprehension there can be no meaningful precis or summary writing—lies in relating words and expressions to their context. This enables the reader to understand even those items which he may never have come across before. Let us illustrate this point.

An overall reading of the passage reveals the following facts:

What is being talked about is the modern man in respect of the choice he faces in the domains of religion and spirituality, and the real need of our times. The choice is between two sets of belief, called conservative dogmatism and rationalistic modernism. And the real need of our times is not intellectual but spiritual. This renders both sets of belief erroneous, since both lay too much emphasis on the intellectual element in religion.

By looking at the passage in the above way the reader can successfully spare himself the ordeal of understanding every individual word or expression.

Yet another way of getting to know something about the difficult vocabulary in a passage can be to look at different words first in relation to one another and then in terms of their formations: thus conservative dogmatism is opposed to rationalistic modernism. If one tries to analyse the latter, its constituents turn out to be reason and modernity, both of which concepts are understandable. Conservative dogmatism thus should contain elements opposed to both reason and modernity. Since one who is conservative is not modern, obviously one who is

dogmatic will not be rationalistic. In this way two major expressions occurring in the passage can be understood just in relation to each other.

Similarly, knowing the principles of word formation, especially the use of prefixes and suffixes, can very often help understand the meanings of particular words and expressions. This would apply to *immature*, *overemphasise*, *undisputed*, *explain the inexplicable* and *comprehend the incomprehensible*. The last two expressions are of special interest since in understanding them both word formation and relating words to one another play an important part.

The next problem confronting the precis writer concerns the ways of sifting the important from the unimportant and the more important from the less important in the passage. This alone can help him shorten his draft and write a precis. Obviously two related skills are involved: elimination and selection. They are related because to eliminate the unimportant or the less important is the same as to select the important and the more important. Here comes the relevance of techniques that help achieve the above goal. A few hints may prove useful in this respect.

1. Where possible, try shortening single sentences:

Example:

It is with the greatest possible regret that I write to let you know that I am unfortunately unable to accept your very kind invitation.

: I deeply regret my inability to accept your kind invitation.

2. Try summarising groups of sentences into one sentence:

Example:

As I thus lay, between content and longing, a faint noise stole towards me through the pines. I thought at first it was the crowing of cocks or the barking of dogs at some very distant farms, but steadily and gradually it took articulate shape in my ears, until I became aware that a passenger was going by upon the high road in the valley, and singing loudly as he went.

: While lying there he heard some noise which at first he thought was made by cocks or dogs, but which later turned out to be by a passenger singing loudly as he was going through the valley.

3. Drop all decorative details not essential to a description.

Example:

The road to Farmer Riley's is smooth and dry, retired as one likes a country walk to be, but not too lonely, which women never like; leading past the Loddon—the bright brimming, transparent Loddon—a fitting mirror for this bright blue sky, and terminat-

ing at one of the prettiest and most comfortable farmhouses in the neighbourhood.

The road to Farmer Riley's is smooth, dry and quite lonely. It goes past Loddon, which is as bright as the sky, and ends at the best farmhouse in the neighbourhood.

4. Try to use single words or phrases for lists or groups of similar objects or qualities.

Example:

The young boys and girls loudly proclaimed their preference for apples, oranges, bananas, lemons, plums and chocolate.

The young boys and girls expressed their preference for fruit and chocolate.

5. Replace phrases and long expressions by single words where possible.

Example:

He had one of the most valuable qualities of a historian—he was able to look at both sides and judge them fairly.

He was an objective historian.

or

As a historian he had the precious quality of objectivity.

The foregoing examples point to one fact: a precis is an exercise in reduction. All possible ways of shortening or reducing the given passage should be tried, without affecting the main points of the original writing. The last point is important. The reader of a precis should not be fed with wrong information. In this context wrong information means two things: altering the main propositional content of the original passage and distorting the differential values of its various parts, i.e., giving disproportionate importance to the minor points of the passage in the precis. All good writing has a sort of differential calculus whereby the points intended to be conveyed to the reader are given varying values that are higher or lower relative to one another. A good precis must preserve the integrity of this calculus.

Let us now attempt a precis of the main points we have stated above for reducing the length of a given passage.

We can shorten a piece of writing by substituting words or phrases for clauses and sentences; by combining two or more sentences into one, using the shortest possible linkers like because, though, yet, however, etc.; by omitting figurative language, repetitions, elaborations and illustrations wherever possible; and by restating the main facts and ideas of the original passage in plain language, ensuring that the precis is approximately one-third the length of the original.

We will now take up a passage and illustrate the step-by-step process of making its precis.

The essence of law is that, where freedom is restricted, it should be in accordance with agreed and published rules, administered in an agreed and public fashion, by a judiciary which is independent of the executive. The idea of law is thus the very antithesis of the idea of the arbitrary power of officials. A recent and in itself rather trivial occurrence will illustrate the point. A man was walking along Knightsbridge, wearing one overcoat and carrying another over his arm. Some overcoats had recently been stolen in the district and a policeman accosted the man and asked him what he was doing with two overcoats. The man replied that they were both his, and that anyhow, it was none of the policeman's business. The policeman arrested the man on suspicion, and took him along to the nearest police station, where he was able to establish the identity and his right to both overcoats, and was promptly released. The man brought an action against the police for wrongful arrest, and, I am glad to say, was awarded £300 damages. The Lord Chief Justice expressed himself in very strong terms about the incident and voiced the hope that the time would never come in this country when we accepted the principle that officials could do no wrong.

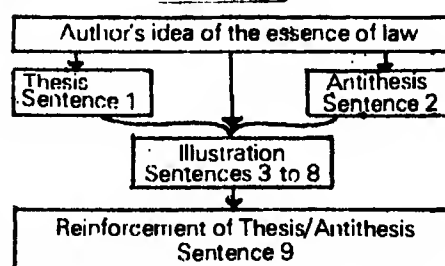

Step 1

Main Topic

Step 2

Main Topic

Step 3

Text

1 The essence... executive.

Precis

Law's essence lies in all curbs of freedom being imposed through legally established and publicly acknowledged procedures.

Text

S 2 The idea of... officials.

Precis

Law and official arbitrariness are

arbitrary.

Text

S 3-8 A recent... damages.

Precis

Recently, after large-scale stealing of overcoats, a constable arrested a person carrying an extra overcoat on mere suspicion. It was adjudged a case of wrongful arrest and the man was awarded £300 damages.

Text

S 9 The Lord... could do no wrong.

Precis

The judge took serious exception to the incident and hoped officials would never be deemed incapable of wrongdoing.

Finally here is a straight example of a passage and its precis:

Passage

All of us are engaged in an unconscious endeavour to distract attention from the respect in which we are inferior to others and to emphasise the respect in which we believe ourselves to be superior. Each of us must feel superior in some respect; and we try, perhaps unconsciously, to convince the world that this is really the one thing that matters. If we are physically superior, then we believe—and try to make others believe—that physical fitness and strength are, after all, the real test of a man. If, on the other hand, we are physically inferior but intellectually superior, then we tend to disparage physical prowess and emphasise the importance of mental ability. If we are bad workmen or bad farmers, then we may try to shine as parlour politicians. If we are uneducated but (self-made) wealthy, well, what is the use of education, anyhow? There's far too much education—and it only spoils a man. If, on the contrary, we are educated, but unsuccessful in the business of life, then we never lose an opportunity of belittling business success. Generally, if we are successful at anything, we believe that success is won by industry, ability and character; while if we have been unsuccessful, we believe that success is a matter of luck! Isn't that so?

Precis

PSYCHOLOGY AND THE BITTER TRUTH

It is a fact of human psychology to give more importance to one's plus points while denying it to those that are minus. It is never a matter of principle or logic. Instinct leads us to rate ourselves higher because of those qualities which we have and to run down others for the ones they have but which we lack. There are plenty of examples to prove the truth of this unconscious aspect of our mind.

(To be continued)

NEWS CAPSULE

AWARDED

Jummalal Bajaj Awards for 1985, carrying a cash prize of Rs 1 lakh, to veteran Gandhian and former parliamentarian T.S. Avinashalingam (outstanding contribution in the field of constructive work), Sanjit Roy, of Tilonia village in Rajasthan (application of science and technology for rural development) and Amtai Wagh of Kōsbad, Maharashtra, a prominent social worker (outstanding contribution to the welfare and upliftment of women and children).

UNESCO's "education for peace" prize (1985) to India's Gen Inderjit Rikhye, and East Germany's Georg-Eckert Institute; the former for his work through the New York-based World Institute For Peace, which he founded in 1969 for carrying out peace projects, and the latter for organising international meetings on school books in which experts from the East and West take part.

APPOINTED

D.A. Desai, retired judge of Supreme Court, as Chairman of reconstituted Law Commission, and **K.N. Goyal**, retired judge of Allahabad High Court, as full-time member of the commission.

D.M. Mishra, Director-General of Central Reserve Police Force, as Director-General of Central Industrial Security Force. **O.P. Bhutani**, chief of Indo-Tibetan Border Police, will hold additional charge of CRPF.

M.L. Wadhawan, member (anti-smuggling) in Central Board of Excise and Customs, as Director-General of newly-formed Central Economic Intelligence Bureau.

Ali Lobbi, one of Egypt's most respected economists, as the country's new premier, replacing Kamal Hassan Aly in a surprise move by President Hosni Mubarak.

Akbar Mirza Khaleeli, Joint Secretary in Ministry of External Affairs, as India's Ambassador to Rome, succeeding **Homi J. Talyer Khan**, now made member of Minorities Commission.

Ashok Gehlot, Union Minister of State for Tourism and Civil Aviation, as President of Rajasthan Congress (I) Committee, replacing Naval Kishore Sharma.

ELECTED

Humayun Rashid Chowdhury, Bangladesh Foreign Minister, as President of the 41st session of the UN General Assembly, to be held in 1986.

Robert Mugabe, Zimbabwe PM, as Chairman of Non-aligned movement for next three years following NAM's choice of country's capital, Harare, as venue for next year's summit.

Gen Wolfgang Altenburg of West Germany as Chairman of NATO's Military Committee, its highest military authority, replacing Cornelius de Jager of the Dutch Army.

VISITED

King Birendra Bir Bikram Shah Dev of Nepal and his wife, **Queen Aishwarya** (Sep 18) on a three-day state visit.

SCIENCE

Cancer Cure? British doctors have succeeded in killing previously incurable cancer cells in experiments with mice and have now begun clinical trials on human beings. Bone and colon (intestinal) cancer were treated successfully at the University of Nottingham by a team of researchers headed by Robert Baldwin, a pioneer cancer specialist. The technique used involved injecting patients with bio-engineered anti-bodies armed with toxins which kill tumour cells without affecting healthy tissue. It could be another five years before the technique is widely used, says Baldwin. The university is also planning to use the technique in experiments on lung cancer, the commonest form of cancer in the world.

DEFENCE

India's first advanced light helicopter. Work on a project to build India's first advanced light helicopter has begun at the Hindustan Aeronautics Limited (HAL) factory in Bangalore. The helicopter, which will be mass produced for the three defence forces, will undergo flight tests during 1988. The ALH, which will be the principal rotorcraft of the army, navy and air force, will replace the Chetak and Cheetah helicopters. It will be developed in the anti-submarine warfare form for the navy.

US F-404 engines for India: The US has agreed to sell highly advanced engines to India for the light combat aircraft being developed by HAL. The F-404 engines reportedly surpass the F-16 engines for performance. The Reagan administration's decision to sell India the engines is viewed as a step towards building closer ties between the two countries. The engines have not been sold to any foreign country so far.

ECONOMY—National

India's foreign trade situation showed significant improvement during 1984-85, the growth in exports resulting in a decline in the year totalled Rs 11,395.98 crores and imports Rs 16,591.86 crores—a deficit of Rs 5,196 crores. In the previous year, exports totalled Rs 9,468.25 crores and imports Rs 15,382.16 crores, meaning that in 1984-85, exports rose by 20.4% and imports by 7.9%. The export performance is considered most creditable in the light of the continued difficulties in international trade. Crude oil exports rose by about 53% and items like tea, spices, rice, cotton fabrics, chemicals and handicrafts showed improvement.

Public sector to joint sector: The two massive oil refineries at Karnal and Mangalore and the aromatic plant at Seelampur, with a collective investment of about Rs 3,500 crores, will be set up in the joint sector, though originally planned as wholly public sector projects. The earlier decision has been revised due to the resources shortfall in the Seventh Plan. Accordingly, the government's participation in the share capital of the three projects is being slashed to 25%. The Cabinet Committee on Economic Affairs has asked the Petroleum

Ministry to work out the details of implementing the projects.

Revenue boost to Assam and Gujarat. The Centre has agreed to a more-than-three-fold increase in the existing rate of royalty on crude oil payable to the oil-producing states of Gujarat and Assam. The revised rate of royalty payable to the two states will be Rs 194 per tonne as against the existing rate of Rs 61 per tonne. The revised rate will boost the annual oil revenue of Assam to Rs 36 crores from Rs 20 crores and that of Gujarat to Rs 40 crores from Rs 12 crores.

Indo-British collaboration. India and Britain have signed a protocol providing the framework for transfer of British technology and establishment of joint ventures. The protocol, signed on Sep 12 in London after a meeting of the joint economic committee, agreed to give priority to enhancing India's exports and collaboration in third country projects. Potential fields of collaboration identified during the meeting were electronics, telecommunications, automobiles, anti-pollution measures, energy conservation and alternative sources of energy.

ECONOMY—International

IMF approach criticised: An increasing number of countries that get aid from the International Monetary Fund (IMF) have had to devalue their currencies in terms of US dollars and other hard money, says an IMF study. Excluding countries that belonged to currency unions, 93% of those aided by the fund had to devalue. When the fund lends money to a member the object is to help that country sell more goods than it buys, so that it can pay back the loan. One way is to lower the value of its currency, which discourages import and makes exports easier. This approach, says the IMF study, is coming under criticism. Austerity programmes lower living standards in the poor countries even further while not really encouraging banks to resume lending. The report shows that of 35 countries that signed up for an IMF programme in 1983, 25 devalued their currencies, ranging from Ghana's 83% and Zaire's 73%.

Mexico in a soup: The IMF has cut off Mexico, long-considered a model by the fund, for unexpectedly failing to live up to its agreements with the IMF. The step is likely to aggravate Mexico's economic crisis with the country's foreign debt now about \$100b. With oil prices falling, it is now unlikely to be in a position to pay off its debts. International bankers who had agreed to reschedule repayments are now reconsidering their decision after the IMF's move.

The IMF, in its annual report, has expressed concern at the debt servicing and financing problems of developing countries and called for removal of protectionist measures by the major industrial countries. Taking a sober view of the recent global economic recovery, the IMF noted that a number of important problems remained to be dealt with. In several industrial countries, unemployment continued to increase and protectionist measures and fiscal imbalances were a source of concern. On the credit side, output in industrial countries indicated a

PEOPLE

In this day and age, when people and places are continually grabbing news headlines, no knowledge is adequate without a comfortable familiarity with these 'big' names. Here's a month-by-month coverage. In this issue, we cover September.

S.S. Barnola: Sworn in CM of Punjab Sep 29.

M.H. Beg: Former Supreme Court judge is head of the Minorities Commission

Y.V. Chandrachud: Is heading a committee examining the constitutional aspects of the Assam-Meghalaya border question.

R.F. Celeste: Governor of Ohio, led a trade delegation of India to prepare for forthcoming visit of Ohio Trade and Investment Mission to India.

M.Gaddafi: The Libyan leader narrowly survived assassination bid by Libyan army officers.

O.Polme: Re-elected PM of Norway after his party, the Social Democratic Front, won 50.1% of the national vote.

Dr Salim Ali: Famed ornithologist nominated as member of Rajya Sabha.

H.N. Sethna: Former Chairman, Atomic Energy Commission, awarded the Dadabhai Naoroji Memorial Prize for contributions to the development of science and scientific institutions in India.

H. Sterken: Defeated Balram Jakhar in the contest for Presidentship of Inter-Parliamentary Union (IPU) by a mere five votes.

Justice A.N. Sen: Of the Supreme Court is the new Chairman of Press Council

Gen Tinsu Lanonda: The Thai PM escaped a coup attempt organised by a faction of dissident army officers led by Colonel Roopacharon and brother Sq Ldr Manas.

H.Willner: Secretary in Chancellor Helmut Kohl's office defected to East Germany.

K. Willoch: Won another term as PM of Norway after a close electoral battle.

rising trend—4.9% and in developing countries—3.7% in 1984. World trade increased by 8.8%. Inflation in industrial countries was down to 4.1% and 37.7% in the developing ones (6.9% in Asia). The IMF said the current account deficits of developing countries declined further to \$44b in 1984 but their heavy indebtedness makes the financial position of many still fragile. The report attributes the improved growth in developing countries to expansion of imports and recovery. The report recommends correction of fiscal imbalances, elimination of structural rigidities that impede effective resource allocation and employment growth, "prudent" demand management and exchange rate policies.

Oil outlook: The world has enough oil to last until the middle of the next century but concentration of most of it in West Asia means that future energy crises can be expected, says a survey by the US geological department. The survey indicated that there were no potential oil bearing formations to equal those in West Asia, meaning that the region will monopolise world petroleum supplies for many decades to come. The report said new oil discoveries are on a downward trend from a high of 35b barrels a year in

the 1950s to 10b in recent years. World oil reserves now total 723b barrels, about a 36-year supply. It estimated undiscovered oil resources of 550b barrels. About 360b barrels of the known reserves and 120b barrels of the undiscovered oil are in West Asia.

EVENTS—National

HAL's new facility: The public sector Hindustan Aeronautics Limited (HAL) has designed and developed a sophisticated facility for testing gas turbine engines of passenger aircraft. The Rs 1.5 crore test facility, which is expected to result in considerable foreign exchange savings, will be used to test the Garrett engines that power the Dornier-223 aircraft HAL is building at its Bangalore complex. The new facility will eventually pave the way for indigenous establishment of future gas turbine test beds for both civil and military purposes.

Speeding up justice: A conference of chief ministers, chief justices of state high courts and law ministers ended in New Delhi on Sep 1 after agreeing on a set of measures to speed up the process of justice and make it inexpensive. The conference also decided to clear all court arrears in five years and fill vacancies in three months. The measures include establishing people's courts, mobile courts and appointing special magistrates to function as alternate dispute resolution mechanism. The conference decided that a judge of the high court will be invited as an expert to sit with a state public service commission in the selection of candidates for the subordinate judicial services. An institute for training judicial officers will be set up with the Chief Justice of the country as its chairman.

Outlay for the NCR: Haryana, Rajasthan and UP have submitted proposals envisaging a total financial outlay of Rs 3,596 crores for development of the sub-regions of the National Capital Region (NCR). Haryana proposed the maximum outlay of Rs 2,631.08 crores, UP Rs 756.81 crores and Rajasthan Rs 208.16 crores. The comprehensive programme included development of regional, urban and rural infrastructure. The proposals were for development of roads, tourism, recreation facilities, industries, power and electrification.

Supreme Court upholds dismissal: The Supreme Court has upheld the dismissal without inquiry of eight employees of the Research and Analysis Wing (RAW) on the charges of misconduct, indiscipline and insubordination. In dismissing the appeals, the court's division bench, consisting of Justices V.D. Tulzapurkar, R.S. Pathak and D.P. Madari, followed a recent judgment which held that government employees could be dismissed without inquiry if the government felt it was not "reasonably practical" to hold one.

Kanishka's insurance: The General Insurance Corporation of India (GIC) has paid Rs 116 crore to Air India on replacement value basis for the loss the latter suffered in the Boeing-747 Kanishka crash while on a Montreal-London flight on Jun 23. Air-India is now in a position to replace the aircraft. This is the largest single loss suffered by insurers in the history of aviation, according to Ashok Goenka, Chairman of GIC.

The sixth round of official level talks between India and China on the boundary issue

PLACES

Auckland: A Greenpeace flagship *Rainbow Warrior* was sunk off the coast of this city in New Zealand by the French secret service.

Birmingham: In England, scene of worst-ever racial fighting between the Black Rastafarian and Asian communities.

Capetown: Three black towns skirting this city were sealed off by the Pretoria Government Sep 8.

New Delhi: The Coordination Bureau of NAM will meet here early next year to review the international situation just before Rajiv Gandhi hands over NAM's Chairmanship to PM R. Mugabe of Zimbabwe.

Dhaka: Venue of the 1986 South Asian Regional Cooperation meeting.

Geneva: In Switzerland, 100 nations including the US and the USSR, reached accord on a final document of the 1968 Nuclear non-proliferation treaty after reviewing it for a month.

Luanda: The eighth ministerial meeting of NAM countries held here unanimously called for sanctions against South Africa.

Mexico City: The Mexican capital rocked by massive earthquakes that killed more than 10,000.

Quito: A "Khalistan" office was opened by Sikh separatists in this Ecuadorian capital.

Sofia: The Bulgarian capital hosted the sixth session of the World Tourism Organisation.

Thane: Town in Maharashtra, will stage a conference on aerobiology to be attended by 150 Indian and foreign delegates.

Tripoli: Fierce fighting between pro-Syrian militiamen and Islamic fundamentalists killed 34 and hurt 73 in this Lebanese port city.

and other bilateral matters will be held in New Delhi from Nov 4 to 11. The last round of talks was held in Beijing in September 1984. The Indian delegation to the next round will be led by A. P. Venkateswaran, Secretary in the Ministry of External Affairs.

High-level bureaucratic reshuffle: The Central Government on Sep 25 carried out a major reshuffle at the secretaries' level. Among the major changes: Health and Family Welfare Secretary Sarla Grewal, appointed Secretary to the PM; Home Secretary R.D. Pradhan as Secretary of the Departments of Internal Security, States and Home; Heavy Industry Secretary D.V. Kapoor as Secretary of the new Department of Chemicals and Petrochemicals and S.S. Shanoa, Adviser to the Punjab Governor as Health and Family Welfare Secretary.

India's first energy plantation has come up on a 12 acre site in Khandia village of Baroda district in Gujarat. The 25 kw of power being generated by the gasifier set up there is enough to meet the full energy requirements of the village. The plant requires no transmission lines; there are no transmission losses and plant load factor is high. The plant costs Rs 2.25 lakhs. The project was undertaken by the Department of Non-conventional Energy Resources which is now planning four bigger plants with a total of 1,000 kw capacity. The plant will be built in four villages in four separate states. During the next five years, it is proposed to electrify 10,000 villages through

such plantations and other non-conventional forms of energy.

EVENTS—International

Modest progress in Geneva: The 40-nation Geneva Conference on Disarmament has wound up its summer session, deadlocked over how to move towards a ban on all nuclear tests, but claiming modest progress towards another priority goal—a ban on chemical weapons. In the session, which was marked by superpower squabbling, the US stuck to its view that reductions in the world's nuclear weapon arsenals should take priority over a complete test ban, which should be a long-term target. Nonaligned countries disagreed, saying that technical means for a verification of a ban—Washington's main reservation on the subject—existed. Both superpowers spoke of modest progress in finding "broad areas" of consensus on the subject of a chemical weapons ban.

New look for British Cabinet: British PM Margaret Thatcher on Sep 2 announced a major Cabinet reorganisation, seen by observers as a step aimed at bolstering her sagging political fortunes and dealing with persistent, record unemployment. The surprise casualty in the reorganisation was the Home Secretary, Leon Brittan, who became Minister of Trade and Industry; Douglas Heud, former northern Ireland Secretary, gets the home office post. Trade and Industry Minister, Norman Tebbit, was named Conservative Party Chairman, replacing John Selwyn Gummer, who gets a junior minister's post in the agriculture department. Lord Young, a minister without portfolio, took over sole responsibility of heading a government drive on job creation as Employment Secretary—a post he earlier shared with Tom King, who now is northern Ireland Secretary.

Britain's secret bills for war: The British Government has prepared emergency plans under which it would hand over control of parts of the country to the US in time of war. As part of a secret agreement between the two countries, it drew up three emergency power bills, promising to hand over British civil and

military resources to the US. The bills reportedly contain provisions for the creation of ground defence areas around key installations, in the process empowering the government to expel people living in such areas, censure of the Press, requisitions of food and fuel stocks, among others. The third of the bills would give the government power to rule by decree, including the imposition of summary death sentences. These revelations were made by journalist Duncan Campbell in an article in the weekly, *New Statesman*. Later, the government, without confirming or denying the article, did agree that "emergency" plans had been made for possible war.

Revitalising China's leadership: More than 100 Communist Party veterans of China resigned on Sep 16 in what was called a 'giant step' towards revitalising the country's leadership. The 131 who resigned included 64 members of the powerful Central Committee and ten of the 24 Politburo members. The announcement ending the life tenure system for party bosses was one of the most sweeping changes in China since the communists seized power 36 years ago. The ten Politburo members who stepped down included 88-year-old revolutionary Marshal Ye Jianying and 81-year-old Mrs Deng Yingchao, the country's highest-ranking woman politician and widow of former premier Zhou-en-Lai.

STATES

Tribunals and courts in Orissa: The Orissa Government has decided to set up tribunals to try cases of economic offences, vigilance and those coming under the CBI's purview. Civil and criminal courts would also be set up in each tehsil to reduce pressure on sub-divisional and district courts. The state government has suggested that arguments be given in writing to save time. CM J.B. Patnaik, who revealed these measures at a conference in New Delhi, said his government had decided to set up a fund to assist needy members of the bar and would bring about the necessary legislation shortly.

Clemency in Assam: The Assam Government on Sep 3, relaxed the upper age limit by six years for a period of three years for employ-

ment in public services. The step has been taken in view of the "exceptional situation" that prevailed in the state during the prolonged agitation over the foreign nationals issue, said a state government notification.

Tamil Nadu politics: CM M.G. Ramachandran on Sep 5, reinducted Jayalalitha Jayaram, for long considered his political heir apparent, as the propaganda secretary of the ruling party AIADMK. He also divested her arch rival, R.M. Veerappan, of the sensitive portfolios of information, publicity and film technology. Veerappan, who was responsible for an anti-Jayalalitha campaign, was made minister of planning, archaeology and passport.

RESIGNED

Charles Hernu, French Defence Minister, on Sep 20 following a controversy over the sinking of a ship belonging to the ecological group, 'Greenpeace' on Jul 10. The ship was sunk, reportedly on Hernu's order, while it was preparing to lead a 'peace fleet' to the French nuclear test site at Mururoa Atoll in the Pacific.

Pranab Mukherjee as the President of the West Bengal Congress (I) Committee, three months after he led the party to defeat in the elections to the Calcutta Corporation. **Priya Ranjan Das Munshi** has replaced Mukherjee.

N.D. Tiwari as UP CM, preparatory to joining the Union Cabinet as Industry Minister. Tiwari was replaced by **Veer Bahadur Singh**.

Nikolai Tikhonov Soviet PM on Sep 27 for health reasons to be succeeded by Nikolai Ryzhkov, a close associate of CPSU leader Mikhail Gorbachov.

DIED

Prof Rodney Porter, 67, world-renowned biochemist who won the Nobel Prize for Medicine in 1972, on Sep 6 in a four-car collision south of London.

Alexi Yepishev, 85, political chief of the Soviet armed forces for more than 23 years on Sep 16 in Moscow.

William C. Rose, who laid the foundation for modern nutritional research by discovering amino acids, on Sep 25 in Illinois, USA. A.P.

TECHNOLOGY AND INDIA

(Continued from page 17)

pite the government's stress on indigenous research and self-reliance, foreign technology continued to be imported on a large scale, especially by the private sector. Also, there was no comprehensive technology policy to nurture and promote local skills and expertise which were superior to imported technology. The Technology Policy Statement announced by the government in January 1983 sought to rectify this lacuna.

The notable feature of the new technology policy is that it recognises the capital-scarce character of a developing economy like ours and aims at ensuring that out available natural endowments, especially human resources, are optimally utilised for a correct mix between mass production technologies and production

by the masses'. The statement, also underlines the need for the development of indigenous technology and efficient absorption and adaptation of imported technology 'appropriate to national priorities and resources. The Technology Policy Statement is more comprehensive than the earlier Scientific Policy Resolution in that it states clearly the aims, priorities and role of indigenous technology as well as specific conditions for import of technology and the various aspects of transfer and diffusion of technology.

One of the most important objectives spelt out in the statement is self-reliance in technology. It notes that in a country of India's size and endowments, self-reliance is inescapable and must be at the very heart of technological development. The statement lays special emphasis on enhancing traditional skills and capabilities using knowledge and techniques

generated by advances in science and technology

Even while stressing the importance of developing indigenous technology, the new policy does not rule out altogether the importation of technology. But it sets out clear guidelines for technology acquisition. In the acquisition of technology, the statement says, consideration will be given to the choice and sources of technology, alternative means of acquiring it and selection and relevance of the products, costs and related conditions. Where the import of technology is contemplated, the level to which technology has been developed, or is in current use, within the country, shall be first evaluated. Lists of technologies that have been adequately developed to the extent that their import is unnecessary will be prepared and periodically updated. In such areas no import of technology would normally be permitted. B.B.

THE RETURN OF HALLEY'S COMET

After 76 years, the celestial visitor has returned. Read our cover story to find out when and where to look for it, and how to photograph the event.

- ☐ Fifth generation computers
- ☐ What makes a person old?
- ☐ Why does everything turn black on burning?
- ☐ Chemicals---Handle with care
- ☐ The making of handmade paper

CURRENT EVENTS-National (Continued from page 23)

ing 1984-85. The wholesale price index rose from 7.6% on a point to point basis as against 8.9% in the previous fiscal year and by 7% as against 9.5% on a weekly average basis. Apart from this, the growth rate of national income during 1984-85 averaged a modest 3.5%-4%.

The report, however, cautions against complacency. For, the medium term outlook for growth faces several constraints. Among these are infrastructural limitations arising from lower than planned rates of growth especially in the output of power. Then, resource constraint is also emerging as a serious factor as reflected in the steadily increasing fiscal deficits. Therefore, rate of savings and their efficient use are extremely important.

The balance of payments position also needs attention because of the continued need for essential imports and debt service obligations. In order to improve the productivity in the economy improvement in the infrastructure industries, higher capacity utilisation in the public and private sectors, avoidance of cost over-runs, reduction in incidence of industrial sickness and timely completion of projects are essential.

The agricultural sector will have to grow at a higher rate to raise the national income and also help achieve the requisite 5% growth rate of the economy in the Seventh Plan up till now the increase in agricultural output has mainly been from production gains in wheat and rice. Performance of other crops like pulses and oil seeds and of dryland farming, which account for 73% of the cultivated area has been far from satisfactory and production of sugarcane continues to exhibit a marked instability.

The report categorically states that raising the gross savings rate above 22-23% of the GDP is an extremely difficult task. The balance of payment situation may well come under strain during the latter half of the Seventh Plan period. This is primarily because the short term prospects of a further major set up in crude oil production are not very heartening and neither are prospects for concessional external assistance particularly good. The debt service obligations particularly to the IMF are likely to pose a considerable burden too. And therefore exports and import substitution will undoubtedly play an important part. India may also have to rely on commercial borrowings to a large extent.

Meanwhile, various efforts are being made to improve the export performance. The recent import-export policy and fiscal incentives to exporters should go a long way in achieving this target. The report also states the need for increasing the capital base of the banking industry and urges commercial banks to raise profitability through greater cost consciousness, improvement of recoveries, reducing non performing loans and improving the quality of loan assets and increasing non interest income.

SUGAR IMPORTS SWEET-SOUR

News from the sugar market continues to be disquieting. The government, to cope with the rising trend of both sugar prices and internal consumption and the declining production, has decided to import more sugar to meet the demand of the 1985-86 sugar season. The import of additional sugar supplies will also provide a cushion for the shortfall in the arrival of the earlier contracted 10 lakh tonnes of sugar of which only 7.01 lakh tonnes has arrived till now.

This additional 10 lakh tonnes of sugar is expected to stabilise sugar prices and ease the availability in the next few months. Already the greater supplies of imported sugar reaching the market have caused a marked downtrend in prices in most areas. Wholesale prices in the northern and western zones declined by 13%, by 12% in the eastern zone and by 21% in the southern zone and now range between Rs 650 and Rs 690 per quintal.

The Centre has attributed the recent decline in sugar output to shrinkage in cane acreage, diversion of cane to gur and khandani, waterlogging in Bihar and UP. Current season production is estimated at a mere 61 lakh tonnes compared to the record 84.38 lakh tonnes during the 1981-82 sugar season. On the other hand internal consumption is expected to rise from 75.70 lakh tonnes in 1983-84 to 81.75 lakh tonnes in 1984-85, with a likelihood of further rise in the near future. The government has, therefore, advised states to enforce measures for prohibiting unwarranted diversion of sugarcane to power crushers and khandani units in the reserved areas of sugar factories as also excise rebate for early crushing.

J.S.

ECONOMY

WORLD BANK REPORT

The World Bank report on Indian economy, more than being just an annual ritual, reflects the state of India's economic scene. It is on the basis of this report that the economists analyse the economic policies of the year preceeding the financial year reported. It reviews and chalks out a future course of action for the optimum utilisation of domestic and foreign resources.

The latest World Bank development report (1985) is a mixed bundle of praise and warning. It is, in fact, one of the most "critical" analyses ever made by any independent agency on India's future plans to stimulate economic growth in the next five years. On the one hand it praises PM Rajiv Gandhi's efforts to open up the economy, simplify licensing procedures and cutback and rationalise taxation rates—both individual and corporate—and acknowledges India's brilliant handling of its balance of payment at a time when most of the developing countries have run up huge external debts. On the other hand it warns that the 5% a year economic growth target set for the period 1985-90 is extremely ambitious and achievable only, "if substantial policy changes are initiated domestically." To achieve this daunting target the study has recommended an increased in external borrowing, relaxation of import restrictions and a much greater emphasis on export promotion.

Like other past reports, this year's study also accuses the Union Government of a bias against export and for import substitution. As a result of this policy the production for exports in 1984-85 constituted only 6% of the country's GNP. The study does not, however, advice complete abandonment of the policy of import substitution, and attaches vital importance to the expansion of the production of major bulk commodities; but it does strongly recommend the association of multinationals in the effort.

The effect of this prolonged neglect of export in India is 'manifested in the adverse impact on the balance of payment position. Thus despite best efforts the external trade deficit has remained about Rs 5,000 crores ever since 1980-81 and there is not much likelihood of the deficit reducing further in the future. In fact there is every chance of a significant increase in the national trade deficit with the shift in policy emphasis to export liberalisation and modernisation of Indian industry through the impact of technology.

According to the report if exports do not expand by 9% per annum, by 1990

the government will face a choice it will not want to make—either increase external borrowings to the point where the debt service ratio increase dramatically or settle for a lower rate of growth."

Available data indicate that India's total external debt on Mar 31, 1985, stood at Rs 28,094 crores and debt service payments in 1984-85 totalled Rs 1,115 crores. However, with IMF loan repayments starting from 1985-86, debt services payment will more than double to Rs 2,845 crores in that year, rising to a peak of Rs 4,045 crores in 1988-89. Such an outflow of resources on current liabilities, will impose a heavy burden on India's capability to manage its balance of payment equilibrium in the years ahead. Therefore in order to retain a healthy balance of payment position, India will have to remain active in the international capital market. I.S.

DEBT CRUNCH

Laertes son of Polonius, Lord Chamberlain of Denmark, was all set to return to France after the coronation of Claudius. The ship was about to sail when Polonius, possibly suspicious of Laertes' habits, advised thus. Neither a borrower nor a lender be." That was way back in the 16th century. Today, even Shakespeare would have been flabbergasted at the ease with which people institutions and governments get into debt.

The debt situation on the world scenario is slowly but surely getting out of hand. The Third World as a whole has to repay a mind-boggling total of over \$1,000b, and barring a monetary miracle, this gigantic amount cannot be returned in the foreseeable future. This sad plight of the Third World countries was the focus of attention of a seminar held recently in Madras. Francis Colaco of the World Bank, who is the author of *World Development Report 1985* came in for some close questioning by the participants. The pertinent questions that surfaced related to (1) the bank's concept of 'adjustment' implying that the poorer countries have to adjust themselves to the policies of the rich (2) the institutional changes sought in the North-South negotiations; (3) the 'pseudo objective' stance of the bank.

It was revealed that the plight of the developing countries has steadily worsened during the last 15 years. In fact, the present debt crisis in the Third World countries seems to be reminiscent of the Great Depression of the 1930s. The LDCs (lesser developed countries) have also fared badly in a variety of other ways as well in an environment of global inflation. The donor-countries and the multilateral lending institutions vigilantly protected themselves from the inflationary erosion of the amounts lent to the developing coun-

tries by promptly imparting the necessary corrections to the rates of interests and repayment period. Consequently, the debt service payments have increased from \$9.3b in 1970 to a staggering \$100b in 1984. The rise reflects both the increased amount of debt and also the higher level of interest rates.

As inflation sky-rocketed, the lending institutions and banks saw that it was in their interests to ensure that the borrowing countries did not take too long over repaying the loans. The Third World countries had to rely on private sources and their higher terms because the flow of long-term and soft International Development Association loans were affected by aid weariness.

It is therefore hardly surprising that the developing countries including India have sought the rescheduling of their foreign debts. The idea, mooted by Fidel Castro, provided a badly needed relief to the debtor countries as the repayments are spread over a long period.

The lenders of ODA representing assistance given by the government of the developed countries normally confine debt relief to current maturities and the governments seek assurances on the economic soundness of the borrowing countries. The lending countries prefer to do rescheduling on a year-to-year basis as it helps to keep tabs on the economic situation of the borrowing countries. But this year-to-year system is not very pleasing to export credit agencies in the lending countries as their sources of funds are the private lenders.

The donor countries and the lending institutions are fully conscious of the fact that they have to keep in mind the mounting burden of debts on the developing countries. The Third World countries, when hit by lack of resources on account of having to meet huge debt service obligations, have to slash down their imports from the developed countries. Apart from this the growing concern of developing countries at the staggering debt burden might give birth to the idea of repudiating or declaring a moratorium on foreign debts. Growing consciousness of these facets of repayment obligations has led to the World Bank report for a once-and-for-all restructuring of developing countries debt into long-term low interest loans.

Dr C.T. Kurien of the Madras Institute of Development Studies opined that hard-pressed developing countries should opt for repudiation without any qualms. His suggestion that the writing-off of debts should be institutionalised sounds constructive enough and it can be taken as a reasonable way to opt out of the global scenario of crushing debts burdens.

N.L.

The world met on the track for the World Cup Athletics, in 1977, at Dusseldorf, in an effort to break off its shackles with the Olympic movement. The year 1983 saw the birth of the World Athletic Championships, at Helsinki. And with Usha striking gold at the Sixth Asian Track Meet, the Sri Lankan umpires had no right to disgrace India at the pitch—or was the match wrongly timed? Jog along to have a healthy look at the sports world!

SIXTH ASIAN TRACK & FIELD MEET

USHA'S GOLDEN SCOOP

V. KRISHNASWAMY REPORTS FROM JAKARTA

India achieved their finest success in international athletics with an impressive tally of 10 golds, five silvers and six bronzes at the recently concluded Sixth Asian track and field championships at Jakarta. They were second only to China, who had come with a 73-member squad, while India had 42 athletes to go with the 10 odd officials. The Indians managed to relegate a depleted Japan, once the forerunner in Asian athletics, to the third spot.

The five-day meet dominated by India's P.T. Usha, who bagged an unprecedented five golds, four of them in individual events, saw a general rise in the standard of Asian athletics. There were records galore—six Asian records, and 16 meet records—which bear testimony to the elevation in the standards, but one must not fail to mention in the same breath that even the best in Asia have some way to go before they reach the world level. The results achieved by the leading Asian athletes in the World Cup at Canberra, a week after the Asian championships, is an evidence of this.

One of the biggest surprises, at least, a puzzle for the common man, is the comparative failure at the world level of Usha. How can an athlete who is head and shoulders above everyone else in the continent be so far behind the world's best? Usha during the course of her 400 m run in Jakarta clocked 52.66 seconds for the best-ever by an Asian and then went one step better at Canberra, chopping off almost a whole second of it, timing 51.61 seconds. But even then she managed only the seventh place out of eight runners at the World Cup which was won by Marita Koch of GDR, who shattered the world record in 47.60 seconds. Usha won the 100 m, 200 m, 400 m and 400 m hurdles besides a gold in 4x400 m relay and a bronze in 4x100 m relay.

Usha's lagging behind at the world level can be attributed to our system and sports set-up. It is only in recent years that Indian girls have been encouraged to take up sports seriously. Otherwise it was nothing more than a casual pastime for the more affluent. Just about 10 women have represented India at the Olympics from the time they first made an appearance at that level in 1952. Need one say anything more than that. But considering that late start, the Indian women have made a significant progress. The Los Angeles Olympics alone provide evidence of that. Usha became the first-ever Indian woman to turn an Olympic final, where she missed the 400 m hurdles bronze medal by

a proverbial whisker, one-hundredth of a second. She was also a part of the 4x400 m relay team which came seventh in the final. Never before has India been represented in two athletic finals at the same Olympics—I am discounting the instance of 1908 Olympics when Norman Pritchard got two medals, for that was an era altogether different.

But granted the women began late and the social constraints have begun to give way only recently, what about the men, one may ask. They won three golds (see results) against the

Shiny and Usha: Stars of the month.

women's tally of seven. The women hold promise of becoming world class in the not-too-distant future. But the men, despite their three golds give no such indication, which if any, is that of stagnation and regression.

Balwinder Singh won the shot put with an effort of 17.88 m. Raghubir Singh Bal took the hammer gold with 64.34 m and Begicha Singh the 1,500 m gold in 3:56.85. Compare that with the world standards in these events—of about 22 m in shot put, 80 m plus in hammer and timings of 3:35 and 3:40 in 1,500 m.

The only way to improve our performance level is to provide something more by way of

THE WINNERS

Results of the Sixth Asian track and field championships held at Jakarta from Sep 25 to 29, 1985 (the winner in each event and the performance of the Indian participants).

MEN: 100 m: 1. Chen Zheng (Chn) 10.28 secs (ACR & AR). Anand Shetty out in semi-finals; Adile Sumariwala eliminated in the first round. 200 m: 1. Jang Jae Keun (Kor) 20.57. Rami Reddy seventh in final; Anand Shetty out in semi-finals. 400 m: 1. Isidro Del Prado (Phi) 45.61 (ACR). Pavittai Singh and C.S. Bajwa out in semi-finals. 800 m: 1. B.Rajkumar (Mal) 1:47.37. 2. Charles Borromeo (Ind) 1:47.99. Bagicha Singh did not finish. 1,500 m: 1. Bagicha Singh (Ind) 3:56.85. 2. Suresh Yadav (Ind) 3:56.90. 5,000 m: 1. Kozo Akutsu (Jpn) 14:22.11. 4. Raj Kumar (Ind) 14:34.85. 10,000 m: 1. Zhang Guo Wei (Chn). 4. Vinod Kumar (Ind). Marathon: 1. Ling Jong Hyen (DPRK) 2:20:29. Rajkamal Dogra did not finish. 4 x 100 m relay: 1. China 39.34 secs (ACR & AR). India eliminated in the heats with 41.18 seconds. 4 x 400 m relay: 1. Iraq 3:07.68. 5. India 3:11.65. 110 m hurdles: 1. Yu Zhicheng (Chn) 13.94. Praveen Jolly did not finish in heats. 400 m hurdles: 1. Ahmed Hamada (Bah) 49.88 secs. 3,000 m steeplechase: 1. Shigeyuki Akiyo (Jpn) 8:46.96. 3. S. Pichaiiah (Ind) 8:48.14. 20km walk: 1. Liu Jianli (Chn) 1:26:51.8. 2. Chend Ram (Ind) 1:27:19.5. 7. Baldev Singh (Ind) 1:37:13.7. High jump: 1. Shuji Ujino (Jpn) 2.24 m. Pole vault: 1. Jie Zebiao (Chn) 5.30 m. 5. Vijay Pal Singh (Ind) 4.90. S.S. Tarwar (Ind) 4.60 m. Long jump: 1. Liu Yuruang (Chn) 8.00 m. Triple jump: 1. Tian Hongxian (Chn) 16.38 m. Shot put: 1. Balwinder Singh (Ind) 17.88 m. 3. Bahadur Singh 17.21 m. Discus: 1. Li Weinan (Chn) 55.30 m. 3. Kuldip Singh

(Ind) 52.36 m. Hammer: 1. Raghubir Singh Bal (Ind) 64.34 m. Javelin: 1. P.U. Buchiren (Chn) 76.56 m. 5. Sarnam Singh (Ind) 72.52 m. Nirmal Singh ninth. Decathlon: 1. Guu Jin Shoen (Tpe) 7,538 points

WOMEN: 100 m: 1. P.T. Usha (Ind) 11.64 (Clocked 11.39 secs in semis—ACR). 200 m: 1. P.T. Usha (Ind) 23.05 (ACR). 3. Vandana Rao (Ind) 23.79. 400 m: 1. P.T. Usha (Ind) 52.62 (ACR & AR). 2. Shiny Abraham 53.32. 800 m: 1. Shiny Abraham (Ind) 2:03.16 (ACR). 1,500 m: 1. Yang Liuzia (Chn) 4:19.11. 4. Suman Rawat (Ind) 9:35.40. 3,000 m: 1. Kim Lyong Son (DPRK) 9:27.75. 3. Suman Rawat (Ind) 9:35.40. 10,000 m: 1. Bock Do Jong (DPRK) 35:17.35 (ACR). Marathon: 1. Asha Aggarwal (Ind) 2:48:53. (ACR) 4 x 100 m relay: 1. Thailand 45.07 (ACR & AR). 3. India 45.22. 4 x 400 m relay: 1. India 3:34.10 (ACR) 100 m hurdles: 1. Liu Huan Jin (Chn) 13.22 (ACR). 5. M.D. Valsamma (Ind) 14.02. 400 m hurdles: 1. P.T. Usha (Ind) 56.64 (ACR). 2. M.D. Valsamma (Ind) 57.81. High jump: 1. Yang Weiqin (Chn) 1.90 m. Long jump: 1. Huang Donhuo (Chn) 6.60 m (ACR & AR). Shot put: 1. Cang Yu Chen (Chn) 18.36 (ACR). 6. Vijaymala Bhanot (Ind) 12.13 m. Discus: 1. Li Xiaohui (Chn) 58.38. 9. Vijaymala Bhanot (Ind) 37.28 m. Javelin: 1. Zhu Hong Yang (Chn) 56.84 m. 6. Rezia Sheikh (Ind) 45.40 m. Heptathlon: 1. Ye Liang Ying (Chn) 5,319 points. 5. Reeth Abraham (Ind) 4,619 points

MEDALS TALLY:

China	19	15	7
India	10	5	6
Japan	3	7	6

V. SWAMINATHAN

... Coasting has to be much more speeded up. Our present coaches, at least many of them, are of the variety who have got their degrees in classrooms at the N.I.S., Patiala. Very few of them had done the event they have become coaches in. Also, there is a definite lack of commitment on the part of the coaches and in some cases even the athletes. For many of our athletes, sport is one way to get a promotion or a better job elsewhere. Once that is achieved, sport becomes secondary. Again one cannot blame the sportsmen wholly for it, for the system has been so built up over the years, that it cares only for those at the very top.

While one does not grudge all that has been given or will be given to Usha and other gold medal winners, would it not be appropriate to give something by way of awards to others who got silvers or bronzes and in some cases minor placings in events where the concerned athlete has shown noteworthy progress.

"I think India has more potential than even China and Japan. The Kerala girls and the hefty lads from the North can get you medals at the international level. But you have to search for these people. Right incentives, and the right approach is what you need. It is not advisable to bring only medal prospects for a big meet. In many cases a junior can learn by just watching the top-flight stars and then can gain a lot by competing with such athletes," comments Derek Boosey, a triple jumper, who born in India could not represent it at the Olympics. He later went off to England and came to Olympics from there. Presently he is engaged in the preparation of the South Korean team for the next year's Asian Games in Seoul.

The dividends of specialised foreign coaching is seen from the results achieved by the Middle-East countries. Small nations like Qatar, Bahrain, Iraq, Oman and Kuwait have coaches from the GDR, USA and likes. Admitted these oil-rich countries can afford to get good coaches at exorbitant salaries, but maybe India can get at least one or two or try for them even on exchange programmes. But for that a lot of spade work has to be done and that is for officials in the federations to do.

The above-mentioned facts apart, two other points, purely athletic in nature, too emerged from the meet in Jakarta. One that the Asian sprinting standards in Asia have risen most dramatically. Five of the six Asian records in the meet were established in the sprint area.

The second point was the continuation of Japanese disregard for the Asian championships. Once again they preferred to send only second-stringers to this meet. Japan have many top class long-distance runners, like the Soh twins, Takeyuki Nekayama, Seko and others, who have made an impression at the highest class of the sport. Their absence from Asian meets naturally affects the level of performance. In the ultimate analysis, this does not work out in the interest of Asian athletics, which stands to gain a lot by stiffer competition in the region.

All said and done, the Sixth Asian track and field championships brought out many thought provoking points, but one hopes we learn from them and not get carried away by the magnitude of our success at Jakarta. The aim should be to improve our level by the time the next edition of the championships comes around in 1987, when they will be hosted by Singapore.

CRICKET

INDIA XI vs SRI LANKA XIII

Indian cricket reached its nadir at Colombo on Sep 11. Its grave was dug by 11 men in white and two in black and white. The men in white turned out to be more lethal as they provided the crucial breakthroughs. This is not to belittle Sri Lanka's 1-0 victory in the three-Test series. But the standard of umpiring took away much colour from their historic victory at the Saravanamuttu Stadium. A number of glaring umpiring errors did irreparable damage to Indian batting in the Second Test. Said Indian skipper Kapil Dev: "We were outplayed in umpiring too," in addition to batting, bowling and fielding.

Full marks, however, to the Sri Lankans who humbled the 'big brother' very convincingly considering the fact that they are the 'babes' of international cricket. The Sri Lankans won the Second Test by a huge margin of 140 runs and the record books would record precisely that. There will be no mention of the fact that a couple of atrocious decisions completely rattled the confidence of the Indian batsmen. The dismissals of K. Srikanth and Dilip Vengsarkar changed the complexion of the game and India never recovered thereafter. For instance: Srikanth was ruled out twice off one ball. First, he was given leg before the wicket and during the process of protesting to the umpire, Srikanth walked out of the crease when one of the fielders removed the balls and appealed for a run out. And lo and behold! the square-leg umpire ruled Srikanth run out. It was a blunder. Technically, the ball became dead following the first lbw ruling. This example would lead one to go in for neutral umpiring. It would at least remove the distrust from the minds of the visiting batsmen.

But umpiring apart, one of the main reasons for India's dismal performance was the insipid show by their batsmen. Not one batsman, except Vengsarkar and Mohinder Amarnath, was able to dominate the bowling. Srikanth, the few times he got onto the front foot, drove the Lankan attack out of its mind. Pity he was thrice cut off in full flight. India's batting failure was inexplicable.

If batting let India down, the bowler did no better. The strike bowlers, Kapil and Laxman Sivaramakrishnan, were hammered out of length. It is very rare to see batsmen stepping out to blast Kapil and Siva, both indisputedly fine bowlers. But the failure of Kapil and Siva to strike regularly put tremendous pressure on the two youngsters Chetan Sharma and Maninder Singh and both proved incapable of emerging matchwinners.

The Indian batsmen could cross 300 only once in six innings. No team can expect to win with such meagre scores particularly with ineffective bowling making the task more difficult. The Indian bowlers bowled poorly and when they did look like coming to terms with themselves, the fielding messed up their chances. Seven catches were dropped by the Indians in Sri Lanka's first innings of the Second Test. It was a poor reflection on a team which dropped just two catches during the entire World Championship of Cricket in Australia. All these slips combined with poor, if not biased umpiring contributed to India's humiliation in Sri Lanka.

The umpiring standard in Sri Lanka gave little chance to India as the suspect decisions came at crucial junctures. Srikanth was the worst sufferer and it was only when he was involved that the umpires seemed biased. It can be attributed to the political situation in Sri Lanka since Srikanth hails from Tamil Nadu. The normally well-behaved Indian opener's irate behaviour also goes to prove that everything was not fair. These developments must have shattered the confidence of the Indian batsmen who knew they would not be spared or given the benefit of doubt. Such an atmosphere and psychological fear of the umpires goes a long way in destroying the confidence of any batsman. Same was the case of the Indian bowlers who found their appeals being turned down most arrogantly by the Sri Lankan umpires. And the fact that they enjoyed the umpires' patronage emboldened the Sri Lankan batsmen and they were able to dominate the Indian bowling in a manner they would probably not be able to outside their country.

India's loss in Tests is nothing new. We have not been faring well in Tests during the last five years. Indians have won just two of the last 40-odd Tests they have played. The loss in the one-day international was a near thing. Only 14 runs stood in India's way. That, too, resulted from a tactical blunder by Kapil who sent in Gavaskar ahead of himself. More imaginative captaincy would have helped India but then Kapil was never a great thinker of the game. He personally failed to lead from the front and certainly failed to inspire the boys.

VIJAY

ATHLETICS

TRACKING DOWN WORLD MEETS

BY RANJIT BHATIA

World Cup Athletics

Athletics has been the key sport of the Olympic movement. Ultimate success in any track and field event has been attributed through achievement in the Olympic Games. There was, until recent times, no other form of world championship in this sport. Unlike most other sports people, athletes had to rely on the Olympics, held once every four years, as their major forum for international competition. The post-World War II years saw a steady growth of the athletic movement to such an extent that it became necessary to provide further incentives to outstanding men and women to prove their worth.

For some years discussions went on in the executive of the International Amateur Athletic Federation (IAAF) on the kind of World Championships to be introduced in the non-Olympic years and ultimately it was decided to begin with an Inter Continental World Cup Athletics to be held every two years. The competition

*Former Olympian, teaching at St Stephen's College University of Delhi.

involved one participant in each of the events from Europe, North America (minus USA), Africa, Asia, Oceania (Australia, New Zealand and the South Pacific), together with teams representing USA, Soviet Union and the European Cup winners. The first World Cup was held in 1977 at Dusseldorf in Germany and proved a tremendous success, not only in terms of raising funds through gate money, but also by providing top class competition of the kind that attracted worldwide attention. The second meeting held in Montreal two years later, succeeded to a much lesser extent, since athletics in Canada has never been considered a crowd-pulling sport. The organisers of the III World Cup in Rome, realising that they might fall in a similar trap, appealed to the IAAF to allow participation by hosts Italy as the ninth team. This was readily accepted and local enthusiasts were able to witness their national heroes compete against the world's best.

In the three World Cup meetings to date the battle for supremacy has been between the US, Soviet Union and the GDR, with the last of these monopolising the women's section. The weak links in the movement have been Africa and Asia. While the former has provided spectacular winners like Miryuts Yifter (Ethiopia) in distance running events, they are particularly weak in field events. Asian athletes to date have been more or less overwhelmed by the occasion and there is the suggestion that they still have a long way to go before they can provide sufficient number of men and women to finish among the first three. Chinese athletes Zhou Zhen Xian (triple jump) and Zhu Jian Hua (high jump) have stood out so far as Asia's leading performers.

The 1985 World Cup has been held after a gap of four years because of the introduction of a World Athletic Championships* in the 1983. During this break Asia, Africa and Australia have made giant strides and the competitions in the Australian capital, Canberra, certainly show signs of this upsurge.

These were primarily introduced for many reasons. First, athletics did not have a world championships for individuals. Second, Olympics were too expensive an affair. A world championships in just athletics was 'manageable'. Third, because of the increased TV and media coverage that this sport was enjoying, there was an upsurge in athletics. Athletes expressed the desire to have a world championship of their own—away from the Olympics.

World Athletic Championships

The first ever World Championships in athletics, outside the realm of the Olympic Games, was held in Helsinki from Aug 7-14, 1983. It attracted over 1,300 athletes from 154-member nations of the IAAF—a record entry from any viewpoint. This was a fitting climax to the proposals made three years earlier, in Paris, when the Council of the IAAF which made it possible for almost every member to take part in it. There were two categories of participants. The A category comprised athletes who had attained stipulated qualifying standards, with the proviso that not more than three per event could be entered from any country. For those nations whose representatives could not achieve this, there was 'B' category participation through lower standards. In the latter category, however, entries were restricted to one person per event from a country.

The extraordinary success of the Helsinki meeting may be attributed to the foresight of

the IAAF which made it possible for almost every member to take part in it. There were two categories of participants. The A category comprised athletes who had attained stipulated qualifying standards, with the proviso that not more than three per event could be entered from any country. For those nations whose representatives could not achieve this, there was 'B' category participation through lower standards. In the latter category, however, entries were restricted to one person per event from a country.

The Helsinki meet provided a fitting curtain raiser to the Los Angeles Olympics the following summer. It launched Carl Lewis (USA) as the phenomenal sprinter. Moroccan Said Aouita as the extraordinary middle-distance man, Czechoslovakia's Jarmila Kratochvilova in 400 and 800m and the host nation's javelin ace Tina Lillak. They together with names like Evelyn Ashford, Daley Thompson, Mary Decker and Marita Koch—took track and field athletics to prominent spaces in sports columns and certainly helped to raise interest in athletics. The income from the Helsinki session was sufficient to encourage the IAAF launch development programmes virtually independent of the Olympic umbrella, culminating in this year's IAAF Grand Prix circuit meetings.

The next World Championships are scheduled for 1987, in Rome.

AROUND THE TRACK IN 30 DAYS

Athletics

Two international marathons were held on Sep 15, one of which was won by a Japanese, credited with the fifth fastest time in his earlier races. At Seoul, venue of the next Olympic Games, Takeyuki Nakayama of Japan won the marathon in 2:10:9 sec. The European Marathon Cup was won by East Germany's Michael Heilmann in 2:11:28 sec.

Badminton

The 5th 'ALBA' World Cup Championships ended on Sep 8 at Jakarta in triumph for the home players, while the Chinese women remained unbeaten as usual. Results of finals:

Men: Singles: Ickuk Sugiarto (Indonesia) b Morten Frost Hansen (Denmark) 15-11, 8-15, 15-4. **Doubles:** Liem Swie King and Hariatmanro Karfano (Indonesia) b Li Yongho and Tian Bingyi (China) 15-11, 11-15, 15-11.

Women: Singles: Li Ling Wei (China) b Ivanna Lie-Ing Hoa (Indonesia) 11-3, 11-2. **Doubles:** Lin Ying & Wu Dixi (China) b Yun Ja Kim & Sang Hee Yoo (South Korea) 15-4, 15-5. **Mixed doubles:** Christian Hadinata &

RECORDS OF THE MONTH

Men: High jump: 2.41m Igor Paklin (USSR) at the World University Games, Kobe (Japan). The previous record—2.40 m—was established on Aug 11 at Moscow by Rudolf Pavarnitsyn, also of USSR. **Shot put:** 22.62m Ulf Timmermann (GDR).

Women: 400 m hurdles: 53.56 sec Sabine Busch (GDR). **Long jump:** 7.44 m Heike Daute-Dreschler (GDR).

Ivanna Lie (Indonesia) b Selen Faldberg (Denmark) & Nora Perry (England) 15-11, 18-17.

Sixteen of the top men, and 12 top women participated in these championships—the first of which was won by India's Prakash Padukone way back in 1981. This year he failed to make the semi-finals.

Boxing

On Sep 21 at Las Vegas, heavyweight champion of the world, 35-year-old Larry Holmes (USA) lost a 15-round unanimous points decision to Michael Spinks (USA), the world light-heavyweight champion. This was the first time in professional boxing that a heavyweight had lost to one in a lighter weight division.

Chess

At the Greater London Chess Championships, which concluded on Sep 7, the women's section was won by an Indian girl—Bhagyashree Sathe, who beat reigning world champion Maya Chiburdanidze of the Soviet Union. This win gave Bhagyashree her third and final norm to qualify as International Women Master (IWM).

Cricket

The English Sunday League Championship and the **Notwest Trophy**, both limited-overs tournaments on the English county circuit, were won by last year's champion county Essex. In the former, Essex beat Yorkshire and in the latter, Nottinghamshire.

The Doodhar Trophy—the national one-day competition on a zonal basis—was retained by West Zone, when they defeated North Zone, in the final at Madras on Sep 29.

Football

After a lapse of two years, East Bengal club, regained the Calcutta Senior Division Soccer League, the premier league in the country.

The 9th Sub-junior National Football Championship for the **Mir Iqbal Hussain Trophy** at Mysore/Bangalore was won by Karnataka who beat Manipur.

Golf

The biennial **Ryder Cup** this year was won by the Europe and Great Britain team, defeating the US by 16½ pts to 11½ pts, on Sep 15. The venue was the The Belfry, near Sutton Coldfield in the English Midlands. This prestigious event is named after Samuel Ryder, an English businessman and golf-lover who donated the cup in 1927. It has principally been a contest between the professionals of Britain and the US. In 1977, other European players were included along with the British team to strengthen the competition. This move paid dividends this year, when the US lost for the first time after 1957, and it was only the fourth occasion that the British team won in the 48-year history of the tournament.

Tennis

The capacity crowds at the Louis Armstrong Stadium at Flushing Meadow in New York, witnessed how three Czechs and an ex-Czech simply dominated. The Results of the US Open championships which ended on Sep 8:

Men: Singles: Ivan Lendl (Czechoslovakia) b John McEnroe (USA) 7-6, 6-3, 6-4. **Doubles:** Ken Flach & Robert Seguso (USA) b Henri Leconte & Yannick Noah 6-7, 7-6, 6-0.

Women: Singles: Hana Mandlikova (Czechoslovakia) b Martina Navratilova (USA)

(Continued from page 28)

and Mitterrand. Trying to bridge differences at home, Mitterrand visited Mururoa atoll, where France holds its atomic tests, on Sep 13. It was meant to be a gesture of defiance and was meant to show that France was determined to protect its interests in the South Pacific. While both the Left and the Right applauded Mitterrand at the time, the subsequent exposure dampened their enthusiasm for the President. Australia, New Zealand and the region's microstates also criticised his visit as a 'provocation'. While the French Government has accepted responsibility for the flagship affair, it may not be the end of the matter.

Despite all its troubled times, France played hostess to Soviet leader Mikhail Gorbachov, on his four-day state visit to the country. Gorbachov, on his first foray to the West after assuming power, went with the objective of convincing the European nations—France and England—about his proposal for separate nuclear arms talks.

Though France reaffirmed its original stance of condemning the US Strategic Defence Initiative, it refused to be drawn into any separate discussions with the Soviets on nuclear weapons. Britain remained non-committal on its part.

Earlier, in a flamboyant gesture of independence, Mitterrand also turned down Reagan's offer for a seven-nation conference of Western allies before the Geneva arms control summit.

CHINA

RESIGNATIONS EN MASSE

About half of the 24-member Chinese Politburo and one-fifth of the 340-odd Central Committee members and alternates resigned just before the National Party Conference began on Sep 18. The 136 resignations from the Politburo, Central Committee and two party commissions came at the end of the fourth plenary session of the 12th Central Committee meeting which preceded the conference, which is the third of its kind since 1949. The members who resigned included Ye Jianying, Xu Xiangqian, Ulanhu, Wei Guoqing, Wang Zhen and Li Desheng. Among the 10 of the Politburo's 21 members who left was the widow of former PM Zhou Enlai. The other nine had military backgrounds and may have opposed the reforms of Deng Xiaoping, who is leading China through what has been called the 'second Chinese revolution'. Although the resignations did not constitute a purge in the traditional sense, they having been preceded by a four month long nation-wide rejuvenation of government, army and local party posts, the elder statesman Deng's hand was clearly discernable behind the process. Despite the publicity given to rejuvenation, age was not a prerequisite to retirement. While those who resigned from the Politburo were almost all in their seventies and eighties, those who remained like Xiaoping himself, Hu Yaobang, Li Xiannian, were also from the same age bracket. Apparently those who opposed Dengist reforms or were not in favour of the shape that China is taking, are now out.

The National Party Conference was called with two ostensible objectives: to deliberate the draft of the next Five Year Plan (1986-90) and to readjust membership of the leading party bodies in time with the stated rejuvenation policy. On the economic front China unveiled a new five-year economic strategy that would give priority to free-enterprise, technological development and a better standard of living for one billion Chinese. Zhao Ziyang said that the overall strategy for attaining these goals would be to push forward the sweeping market-style economic reforms initiated in China in 1978. He said that emphasis would be placed on improving the operation of large and medium-sized state enterprises by making them 'basically independent and responsible for their own profit and loss.'

BADLY TIMED

Can an alarm clock be set at 9.30 p.m. to go off precisely at 12 noon the next day? Well that's no riddle for you to solve, for the catch in the statement is logically apparent.

But not so to Deepak (Karan Baidyan), who under the thumbail of his no-nonsense wife Rajani (Priya Tendulkar) saw to it that the alarm set at 9.30 p.m. went off only at 12 noon the next day (supposedly having slept through the silence of the midnight).

The producers of the consumer-oriented Sunday serial *Rajani* evidently overlooked the glaring flaw in the Oct 13 episode. The ridiculous outcome of humour in a hurry?

In an article in the *People's Daily*, Deng spelled out what he actually wanted for China. He said that China will be socialist and ultimately communist but socialism does not mean poverty. The target is quadrupling the gross national product by the end of the century and to reach the level of the 'First World' in 50 years' time. For this, China would have to be opened to international trade and capital investment. Despite some setbacks, especially in the four special economic zones, which constitute the laboratory for China's economic experiments, the country remains committed to Dengist policies.

However, Deng's policies have not been going down well with all sections of his party. At the Central Committee plenum, Chen Yun, a senior party member and veteran economic planner severely criticised the Chinese leader's modernisation programme and blamed it for the country's increasing inflation and depleted foreign currency reserves. Although Chen does not wield as much power as Deng his remarks may signify signs of a split within the party ranks.

NORWAY-SWEDEN

RETURN OF THE DEMOCRATS

The two icy states of Europe, Norway and Sweden held their general elections on Sep 9 and Sep 15 respectively. In Norway, although the centre-right government was not ousted, the Labour Party's gains were significant, rising from 37.2% of the votes in 1981 to 40.8% in September. Along with the Left Socialists, Labour holds 77 of the 157 seats in the Storting, the Norwegian Parliament. Kaare Willock's coalition of his own Conservative Party, the Christian People's Party and the Centre Party, holds 78 seats. The anti-tax Progressive Party holds not only the remaining two seats, but also the balance in the Storting. This situation will continue for four years because the Norwegian Constitution does not permit the Storting to be dissolved until it has completed its full term.

In Sweden, Olof Palme's Social Democrats were voted back to power but with a reduced majority. Since 1982, it has ruled with 166 seats in the Parliament to the non-socialists' 163. It now has 159 seats to the non-socialist group's 171 and may have to depend on the votes of the Parliament's 19 communist members. Palme has so far ignored the communists but during this election campaign he claimed that he no longer had any aversion to making deals with the communists on specific issues because their present leader was a revisionist, Lars Wernner. Among the non-socialists, the Centre Party won 44 seats, the Liberals 51 seats and the Moderates 76. The Liberals made the most phenomenal gains, increasing their seats from 21 to 51.

While in Norway, the government will perhaps face problems over defence and foreign policy, Palme's test will come in the field of economic policy. In 1982, he imposed a 16% devaluation which had the immediate impact of stimulating exports, production and investment. But economic forecasters say that Sweden's growth rate will slip down in 1986 to about 1.2%. To control the economy, Palme faces the choice of increasing taxes with the communists or cutting public spending with the non-socialists.

EAST-WEST GERMANY

CORDIAL OVERTURES

The Germans on both sides of the border call it *Sonderverhältnis*: it means a special relationship. This special relationship was strengthened in September when Franz Josef Strauss, the leader of the Bavaria-based Christian Social Union held talks for one hour and a half with east German Communist Party Chief Erich Honecker at Leipzig. Strauss said that the East German leadership wanted to improve relations with West Germany, and that Honecker had promised some human rights concessions. This would include an extension of eligibility for exit permits. At present, the immediate family members of a West German resident are allowed to leave the country. Now other relatives like aunts and uncles will also be allowed to join their relatives abroad. Honecker also promised to relax the 'ban on contacts' which forbids members of the East German police, military and security services from having any 'contact' with the West. He also reportedly assured Strauss that minefields along the 835 mile inner German border would be dug up and removed.

Honecker stated that there was 'very great optimism' for the future and was told that the invitation to visit West Germany, which he was forced to cancel last year under Soviet pressure, still stands. The relationship between the two countries has become warmer despite the spy scandals which have rocked Bonn. Economic relations, too, are

NEHRU HOCKEY TOURNAMENT

Within the short span of two decades, the Jawaharlal Nehru hockey tournament conducted annually in Delhi has become a byword for the promotion of the game in India. The tournament was started in December 1964 with multiple purposes—to perpetuate the name of India's first PM who died in May that year; to popularise hockey and locate talent; and to provide regular and intensive competition for India's leading hockey club and institutional teams. To achieve these objectives, a Jawaharlal Nehru Hockey Tournament Society was set up with the President of India as its Patron-in-Chief.

The Nehru hockey tournament has started new trends in Indian hockey. Since 1965 foreign teams have been annually invited.

The most unique contribution of this tournament was the introduction in 1972 of an all India school tournament known as the Junior Nehru hockey tournament—for boys under 17 years—which precedes the senior championship. Annually 32 to 35 teams participate. Not content to rest on their laurels, the tournament society has since 1979 been organising a summer coaching camp for about 60 talented players spotted in the Junior Nehru tournament. Six camps have been held so far four in Delhi, one each in Srinagar and Mercara (Karnataka). This follow-up action, sponsored by some private sector companies is very beneficial as many of the Indian junior hockey team players in the 1980s were initially nurtured in these summer camps. Prominent coaches from the NIS Patiala are appointed each year to impart training to the talented juniors. The 12 most talented junior hockey players are also awarded annual scholarships.

After the junior tournament started paying dividends, the society felt that hockey should be promoted at the grassroots level in the country. To achieve this objective a sub-junior tournament for boys under 15 years was started since 1983. In this tournament every state and Union territory through their Directorate of

Education is invited to send its best team after holding broad-based contests at the district and state level. This venture has been launched due to the generosity of TISCO which contributed Rs 5 lakhs for this purpose.

So the Nehru hockey tournament are the premier hockey promoters in the country as they alone annually organise championships at the senior level and for boys under 15 and under 17 years. Indian Airlines are the current holders of the Nehru hockey tournament having beaten BSF 3-2 in the final last year. However, BSF and Northern Railway have the best record in the tournament having won it four times each.

NOVY KAPADIA

ROVERS CUP

The Rovers Cup football tournament held annually in Bombay is the second oldest football tournament in the country. It commenced way back in 1891, just three years after the Durand Cup. However, unlike the Durand, the Rovers Cup has always been staged in Bombay. The tournament is organised by the Western India Football Association (WIFA) and along with the Durand, IFA Shield, DCM and Federation Cup, is the most prestigious soccer tournament in India.

The exact origins of the Rovers Cup are unknown. Some British soccer enthusiasts started the Rovers Cup, naming it after their club which bore the same name. Initially the tournament was confined to British regimental teams. Mohun Bagan were the first civilian team to be invited in 1923. In their first appearance in the tournament they reached the final but lost to Durham Light Infantry 1-4.

Bangalore Muslims were the first Indian team to win this trophy in 1937 when they beat Calcutta's famed Mohammedan Sporting 1-0 in the final. Hyderabad City Police later known as Andhra Pradesh Police have the unique distinction of entering the Rovers Cup final on nine occasions and winning on all nine occasions. They are also the only team to win a major knock-out competition in India for five years in a row having annexed the Rovers Cup from 1950-54. Mohun Bagan have the best record in the Rovers Cup having entered the final on 18 occasions, the maximum by any team, and have emerged winners nine-times and runners-up nine times.

Coach of Delhi Sub-junior football team, coach-cum-captain of a first division Delhi football league club, teaching in University of Delhi.

Since 1962, the format of the tournament has been altered. There is a preliminary phase from which teams qualify for the tournament proper to which entry is restricted to only the best teams of India.

The holders of the 1984 Rovers Cup are Mohammedan Sporting which beat JCT Mills (Phagwara) 1-0 in the final. N.K.

SIXTH HIMALAYAN CAR RALLY

The sixth Himalayan Car Rally is important for more than one reason. It is not only going to be the most spectacular of the competitions held so far, it also stands a chance to be accorded a world championship event status. The organisers expect more than 100 Indian and foreign cars to participate.

This year, the Federation Internationale du Sport Automobile has deputed two observers to make their assessment of the organisational part of the rally. A good report from these observers would mean the Himalayan Car Rally getting a World Championship status. The elevation to world status of this rally would give a new fillip to car racing and the automobile industry in India.

The fifth Himalayan Car Rally was terminated last year after it had successfully completed the first two legs, which involved driving 1,931 km, following PM Indira Gandhi's assassination. Kenya's Jayant Shah, who had won the rally in 1983 too, had been leading with 117 penalty points when the rally was terminated. He was declared the winner though no prize-giving ceremony was held. The rally provides stiff competition to the participants and stretches to 3,800 km of skillful driving through over 10,000 ft high Himalayan passes, rivers, forests and rough land. The cars take off at a pre-scheduled time at fixed intervals. The rally goes through one competition to another and one checkpoint to another. The time for this is set by the organisers to help the drivers attain high average speed regardless of the area through which they pass. Late arrivals at every checkpoint are given penalty points. The winner is adjudged by the least number of penalty points. Apart from the adventure and skill, an important aspect of the rally is the support given to the participants by mobile service crews. The mobile service crew travel in special cars that are equipped with modern equipment. The rally car is allowed to accommodate only the driver and a specialist navigator-cum-driver to help in emergency. Both are normally supposed to be good mechanics too. V.L.

flourishing. In 1984, East Germany accepted a \$351m loan from the Federal Republic and it also allowed 35,000 East Germans to emigrate to the West. During the first half of this year, East Berlin imported \$1.24b worth of West German goods, while its exports to the same country dropped by 2% to \$1.19b. This suggests that East Berlin's balance of payment deficit would be financed by a special West German credit arrangement with East Berlin, known as 'the swing.' However, much depends on the outcome of the Reagan-Gorbachov summit.

MIDDLE-EAST

USING BRUTE FORCE

Terrorism made its appearance again in the Middle-East when four Palestinian gunmen belonging to the Front for the Liberation of Palestine (FLP) hijacked an Italian luxury ship *Achille Lauro*, near Alexandria, Egypt, held 420 passengers, mostly crewmen, as hostages

and even executed an American passenger to demand the release of 50 Palestinians from Israeli jails.

After 48 hours of negotiations in which a leading role was played by Egypt, Italy and the Palestine Liberation Organisation (PLO), the hijackers surrendered. The PLO had earlier denied any involvement in the incident and states that it had been staged to undermine the worldwide sympathy for them after the Israeli air-raid.

The hijacking ordeal was brought to an end after Egypt conceded three demands of the hijackers—a talk with the US and Israel for the release of Palestinian prisoners, a guarantee that they would not be tried and also would not be handed over to the PLO.

The incident, however, did not end there. The Egyptian airliner carrying the hijackers was intercepted by American F-16 warplanes and forced to land at Sicily airport. Meanwhile the PLO gunmen are lodged in Italian high security prisons. SANJUKIA BANERJI & A. N.

THE FREEDOM MOVEMENT-2

PERSONALITIES

BY R. C. THAPER
University of Delhi

Allan Octavian Hume (1829-1912): Founder and first General Secretary of the Indian National Congress; retired member of the Indian Civil Service; a great sympathiser of the Indian people; propagated the Congress ideas in England.

Dadabhai Naoroji (1825-1917): "Grand Old Man of India"; a prominent leader of the Congress in its early years, and served it till the end of his life; worked for attainment of Swaraj; believed that the British nation was essentially just and ready to redress grievances if acquainted with the true state of Indian affairs; made England the centre of his political activities; author of a monumental work *Poverty And Un-British Rule In India* wherein he put forward the drain theory—the whole gamut of financial, civil and military set-up was geared towards setting up a mechanism which extorted resources from the Indian economy for the benefit of the British economy.

Surendranath Banerji (1848-1925): The "Indian Demosthenes"; passed the Indian Civil Service in 1869 but was dismissed for a minor irregularity; then established the well-known Rippon college of which he was the Principal for a number of years; founded *Bengali*, a daily English newspaper and edited it; became President of the Congress twice—1895 and 1902; achieved all-India fame when he led the anti-partition agitation in 1905.

Gopal Krishna Gokhale (1866-1915): Started his life as a Maths teacher and soon became Principal of Fergusson College, Pune; played a commendable role in the Imperial Legislative Council, to which he was elected in 1902; founded the Servants of India Society.

Bal Gangadhar Tilak (1856-1920): "The father of Indian unrest"; took his degree in Law in 1879; started two well-known papers—*Kesari* and *Marhatta*; political career began in earnest when famine broke out in the Deccan in 1896. He and his followers explained to the people the relevant sections of the Famine Relief Code and encouraged them to be bold and fearless in demanding their rights. Utilised the Indian religious instinct and historical traditions to develop patriotism and nationalism. Inaugurated the *Ganapati* festival in 1893 and *Shivaji* festival in 1895; through his scholarly work *Gita Rahasya*, he taught the people to fight against oppression and unrighteousness. Achieved all-India fame following the Partition of Bengal. The man who bravely said: "Swaraj is my birth right and I shall have it." Believed in 'militancy and not mendicancy'.

Lala Lajpat Rai (1865-1928): A great leader, a dedicated social worker and an educationist of distinction. Joined the Indian National Congress at the Allahabad session (1888). Joined the Extremists in the 1907 Congress split and chose to work with Tilak. Started a newspaper, *Young India*. Presided over the Congress session in 1920. Became a member of the Indian Legislative Assembly in

1923 and worked for some time as Deputy Leader of the Swaraj Party. Led the boycott demonstration against Simon Commission in 1928; was violently assaulted in the lathi charge and died a martyr. A great orator in Urdu and also a writer of distinction.

Bipan Chandra Pal (1858-1932): One of the eminent extremist leaders of the early 20th century. An ardent supporter of boycott, swadeshi and national education. Did not believe in Dominion Status and wanted full-fledged independence. Rose into prominence after the Partition of Bengal. In the 1907 Surat Congress session, he fought for Tilak's candidature for presidency. Parted company with the Congress and extremism in the last few years of his life.

Mrs Annie Besant (1847-1933): The Grand Old Lady of Indian nationalism. Joined Theosophical Society in 1889 and became its President in 1907. Settled in India in 1893. Worked for the social and educational uplift of India. Translated the *Bhagwat Gita* into English. Joined the Congress as she felt there could not be real progress in social and educational fields without elevating India's political status. In 1916, inaugurated all India Home Rule League in Madras. Played an important role in uniting Moderates and Extremists at the Congress Session in Lucknow. In 1920, left the Congress but continued to serve India till her death.

C.R. Das (1870-1925): Popularly known as 'Deshbandhu'. Had a thriving practice at the Calcutta Bar when he entered politics in the 1920s. Boldly, criticised Gandhi for suspending the 1922 civil disobedience movement. His views were appreciated at the Gaya Congress session, which he presided; resigned due to Rajagopalacharya's opposition. Subsequently, he alongwith Motilal Nehru and Hakim Ajmal Khan, founded the Swaraj Party.

Motilal Nehru (1861-1931): A famous national leader of the Gandhian era; a prosperous lawyer of the Allahabad High Court; became a member of the Home Rule League in 1917. Founded Swaraj Party and was its central figure. Became Congress President in 1930. Donated his palatial houses 'Anand Bhawan' (later known as Swaraj Bhawan—Abode of Freedom) to Congress. He was the father of Jawaharlal Nehru.

Pandit Madan Mohan Malaviya (1861-1946): One of the most respected nationalists in India. Joined the Congress in 1886 and remained its member till the end of his life, though at times protested against its policies and programmes. Twice elected President of the Congress. An orthodox Hindu, he was elected thrice as President of the Hindu, Maha Sabha; represented the Hindu community of India at the Round Table Conference. Founded the Nationalist Party with the primary objective of protecting the interests of Hindus. Also a journalist and a great social worker.

Subhas Chandra Bose (1897-1945): Affectionately remembered as 'Netaji' by his

countrymen. Resigned from the Indian Civil Service in 1921 to join Gandhi's campaign of non-cooperation. Did not agree with Gandhi on political questions of the day. Worked in Congress from 1921 to 1939; elected President of the Congress in 1938, but soon came into conflict with the Congress high command. In 1939, left Congress and formed another party, Forward Block. When World War II broke out, he was arrested, but escaped from India and reached Japan; formed an Indian National Army (INA) to fight the British, but was unsuccessful due to Japan's surrender. Believed to have died in an air crash in 1945. It was his desire to unfurl the national flag at Red Fort in Delhi. Every year on Aug 15 the national flag is unfurled there in deference to his wishes. His slogan of 'Jai Hind' is on the lips of millions of Indians.

Mahatma Gandhi (1869-1948): Mohandas Karam Chand Gandhi known as 'Father of the Nation'. He was the greatest son of modern India. He was a great Indian patriot, social reformer and moral teacher. He believed in non-violence. He led many movements in India to secure India's independence. He was in favour of democratic and united India. He led the Indian National Movement from 1920 onwards till 1947 when India became free. He was assassinated in 1948 when India became free. He worked for Hindu-Muslim unity and for the uplift of Harijans and women.

Sardar Vallabhbhai Patel (1875-1950): Known as the Iron Man of India; a native of Gujarat, he was a very able Home Minister in the first cabinet of independent India. In achieving the integration of the Indian states, he demonstrated his formidable political acumen.

Maulana Abdul Kalam Azad (1888-1958): A great nationalist who believed in communal harmony; elected President of the Indian National Congress in 1923. A colleague and associate of Mahatma Gandhi. Remained Union Minister for Education from January 1947 till his death on Feb 22, 1958.

Dr Rajinder Prasad (1884-1963): Joined the Congress in 1911. Edited a new Hindi weekly called *Desh* in order to reach the masses when the Congress, after its 1920 Nagpur session, changed the whole base of Indian politics by deciding to involve the masses in the freedom struggle. Allotted the portfolio of Food and Agriculture in the Interim Ministry. Unanimously elected as President of the Constituent Assembly in 1947. President of the Union from 1952 to 1962.

Jawaharlal Nehru (1889-1964): Laid the foundation of modern, industrial India. Architect of the policy of non-alignment. India's PM from 1946 till his death in 1964. A leading member of the Indian National Congress; presided over many of its sessions. His Presidency of 1929 Lahore Congress when complete independence was declared to be the aim of Congress, is especially important and historic.

CAREER NEWS

Banker's Choice

How would you like to be a banker dealing with crisp and soggy notes all day long, fixing people's fat deposits or helping enterprising young entrepreneurs with loans? Sounds exciting, doesn't it? Well, a whole lot of openings have been announced by the Banking Services Recruitment Board (BSRB).

If you have a degree from a recognised university or any equivalent qualification recognised as such by the Government of India you may try your luck as a Probationary Officer (PO). The BSRB (Western Group Bombay) has announced 300 vacancies for POs. It has also announced 525 posts of Agricultural Finance Officers/Rural Development Officers for which one needs to have a degree in Agriculture/Agricultural Engineering/Animal Husbandry/Horticulture/Veterinary Science/Dairy Science/Fisheries Science or Agricultural Marketing and Cooperation.

Written exams will be held for the two posts on Dec 29, 1985 and Jan 19, 1986 respectively. For details please see *The Hindustan Times*, Oct 8, 1985.

You also have the choice of Management Trainee/PO with the BSRB (Delhi) which invites applications from Indian citizens for 200 appointments in the Punjab National Bank. Of course, you will have to qualify a written exam to be held on Dec 29, 1985. For other details

and application format please look up *The Hindustan Times*, Oct 8, 1985.

The Central Recruitment Board (State Bank Group) has 374 vacancies to be filled up by POs, in the Associate Banks of SBI, the written exam for which will be held on Dec 22, 1985. Look up *The Times Of India* dated Oct 3, 1985 for other details and application format.

A variety of posts in the officers' cadre, in the Central Bank of India have also fallen vacant. The BSRB (Central Group) invites applications for POs (75), Assistant Security Officers (28) and Vigilance/Investigating Officers (5). The common written exam for all the above posts will be conducted on Dec 15, 1985. Please see *The Times Of India*, dated Oct 9, 1985, for application format and other details.

The BSRB (Southern Region) also invites application for the posts of 230 POs to be appointed in Canara Bank, Syndicate Bank,

A Bumper Offer To Bank On

The December 1985 issue of *CTTimes* is being brought out with the future bank officer in mind. If you are one, be on the look out for the issue with exhaustive objective-type questions consisting of Test of Reasoning, Quantitative Aptitude, General Awareness and a detailed feature based on descriptive questions for the English paper—all carefully compiled for your positive success in the forthcoming bank exams.

Corporation Bank and Vijaya Bank. Though these vacancies are likely to arise only during 1986-87, the written test will be held on Dec 15, 1985. For application format and other details, see *The Times Of India* of Oct 9.

Postponements

The Civil Services (Main) Exam 1985 will commence on Nov 22, 1985 instead of Nov 1, 1985.

The Section Officers/Stenographer's (Grade 'B' Grade II) limited departmental competitive exam 1985, earlier scheduled to commence on Dec 10, 1985 will now commence on Dec 18, 1985.

Overseas Scholarships

The Ministry of Home Affairs will award nine Passage Grants and 29 National Overseas Scholarships for higher studies abroad for SC/ST students for the year 1985-86. For application forms, which will be supplied by post only, please write enclosing a crossed IPO for Re 1 alongwith a self-addressed, stamped envelope (28 cm X 12 cm) to: The Deputy Secretary, Ministry of Home Affairs, Protection of Civil Rights Cell, Room No. 240, A-Wing, Shastri Bhavan, New Delhi-110 001. The IPO should be drawn in favour of the Secretary, Ministry of Home Affairs, New Delhi.

Applications will be supplied by post only upto Dec 15, 1985, and the last date for receipt of completed applications is Dec 30, 1985. For more details please see *Employment News* of Oct 5, 1985.

Answers to

TEST YOUR WORD POWER

- binary:** B: of or involving a pair or pairs characterised by two. Based on nothing more than a combination and permutation of two binary digits—zero and one—the computer is the workhorse of 20 men.
- caricature:** A: to represent so as to make ridiculous. The Japanese have always been easy to caricature, from the samurai warriors of old to the subhuman sadists of wartime propaganda and today's supposed economic animals.
- dispel:** A: to clear; disperse; drive away by scattering. Since AIDS was first recognised in 1981, researchers have been able to dispel many early misconceptions—for instance, that it might be spread by casual contact with an infected person.
- emblazon:** A: to adorn richly, especially heraldically. For millions of Japanese, Aug 6, 1945 is forever emblazoned in memory.
- endorse:** A: to approve; confirm; support a claim, statement, etc. In recent weeks French politicians of all stripes, except the beleaguered communists, have endorsed the notion of defending West Germany if war breaks out.
- forlorn:** C: forsaken; uncared for; desolate; miserable; wretched. Once Cologne was a jewel of medieval Europe; now much of the city (pop. 997,000) is a hodgepodge of forlorn apartment blocks and vacant lots.
- fountainhead:** C: original source. Cologne is a fountainhead of civilisation that has started to seep out again.
- hideous:** B: very ugly; frightful; repulsive. During dictator Joseph Stalin's "Hate America" campaign of the early 1950s, Kremlin artists depicted US soldiers as hideous, spider-like creatures, armed with spray guns and injection needles, demonically waging germ warfare.
- indignation:** C: anger caused by injustice, misconduct, etc. Few consumer issues apart from the transport services, arouse such helpless, seething indignation as the vagaries of Indian Telephones.
- juxtapose:** A: to place side by side. In *Kiss Of The Spider Woman*, filmed in English from the novel by the Argentine Manuel Puig, Hector Babenco has folded his social concerns into a more

complex and deliberately stylised film, in which politics are juxtaposed with the magic of movies themselves.

- monastery:** D: a place where monks live in seclusion. Driven out of Constantinople by the Turks, an Armenian abbot named Mekhitar arrived in Venice in 1717 and set about converting a dilapidated island leprosarium into a monastery.
- marass:** D: anything that perplexes, as a difficult situation; marsh. The International Monetary Fund (IMF) has a standard recipe for developing nations struggling to climb out of the morass of foreign indebtedness: austerity.
- neurosis:** D: nervous disease; a functional nervous disorder. Impostor phenomenon, a neurosis that affects only those who have achieved success, is a peculiar blend of insecurities.
- nonchalance:** C: unconcern; indifference. Despite President Reagan's nonchalance, Americans seem somewhat concerned about his health though not overly so.
- notch:** A: to achieve; score. By 1990, the computer industry will notch up world sales of one trillion dollars.
- propitiate:** A: to appease; pacify; with the favour or support of The life in R.K. Narayan's stories consists largely of people doing just what they and their ancestors have been doing for hundreds of years—they propitiate the gods as best they can.
- scribe:** C: writer; copyist; professional letterwriting. Mahabharata is a heroic narrative about two warring families, written in Sanskrit by a series of anonymous scribes over eight centuries.
- swap:** A: to exchange; barter. Six years after the Shah's ouster, it would appear that Iran has swapped one set of constraints on personal freedom for another.
- toll:** D: a grievous or ruinous price, especially, cost in life or health. While AIDS' toll of fatalities remains relatively small, it is cutting a psychological and social swath far wider than its numbers.
- tribulation:** A: grief; misery; trouble. The telephone subscribers' saga of tribulations is endless: excessive billing, arbitrary disconnection, dead phones for lengthy periods.

Vocabulary Ratings:

- 20-18 correct..... exceptional
17-15 correct..... excellent
14-12 correct..... good

COURTS vs LEGISLATURES

BY P. M. BAKSHI

The Constitution of a country mainly deals with the distribution and exercise of sovereignty within the State. There are several modes of distribution of sovereign powers. It may be distributed vertically, as between the Centre and the states. Or, it may be distributed horizontally, as between the three main organs of the State, i.e., the Legislature, the Executive and the Judiciary. The Constitution-makers tried to effect this distribution of powers so as to clearly demarcate the functions of the three organs. Nevertheless, in practice, there do arise occasions when the exercise of powers by one organ is questioned by another. Such a conflict of jurisdiction leads to delicate situations in some cases.

Precisely such a situation arose in Tamil Nadu recently, when the state Legislative Assembly in exercise of its jurisdiction under the Constitution, held the editor of a newspaper guilty of "contempt" of the state Legislature and condemned him to imprisonment for "breach of privilege". The action of the state Legislature was challenged in the High Court, on the ground of violation of the editor's Fundamental Rights. Still more recently, a legal tussle has arisen between the Legislative Assembly and the High Court in J & K.

What is important in such cases is the constitutional background against which the particular controversy has arisen, and the legal issues that emerge out of such controversies. The above subject is covered under parliamentary privilege and the precise question to be considered is how far it is subject to the jurisdiction of courts.

Legislative Powers

The function of the Legislature is to make laws, to hold the Executive accountable for its political acts and to approve of the budget. In order to enable the Legislature to perform its functions independently and effectively, the Constitution confers certain powers, immunities and privileges on the Legislature both at the Centre and in the states. Art 105 and Art 194 of the Constitution deal with the powers and privileges of the Central and state legislatures respectively.

One of the well-recognised privileges of Legislature is its right to punish a person who acts in a manner which is offensive to the dignity of the House, or obstructs its proceedings, or intimidates its members or officers, or casts reflections on their conduct or otherwise commits a "contempt" of the House. The punishment to be awarded by the House for such misconduct

may be admonition, reprimand and imprisonment. Admonition and reprimand are effected by merely calling the guilty person to the "bar" of the House and condemning his conduct. A Committee of Privileges constituted by the House holds an inquiry into the alleged misconduct and submits reports to the House, which then gives its ruling as to the guilt and punishment to be meted out.

Powers Of Courts

What happens when the action taken, or proposed to be taken by the House is challenged before a court of law?

In this context, it may be recalled that the Indian Constitution vests—(i) in the Supreme Court, a power to issue writs for the enforcement of Fundamental Rights (Art 32) and; (ii) in each High Court, a power to issue writs for the enforcement of Fundamental Rights and for other purposes.

Thus, if the allegation is that the Freedom of Speech, guaranteed under Art 19 (i) (a) of the Constitution, is violated by the proposal of the House in a particular case to punish a person who has written an article or made a speech amounting to "contempt" of the House, the Supreme Court must at least look into the matter. This applies to the High Court also. Besides this, if a person is arrested he may approach the Courts for protection of his right to "personal liberty" (Art 20 and 21).

Conflicts

Such proceedings naturally lead to the question of the existence of the privileges of the House. The situation obviously leaves scope for conflict between the House and the Courts. It may be repeated that the constitutional provisions as to privileges of Parliament and state Legislature do not enumerate or state the Privileges. So no one can pin-point the extent to which parliamentary privileges can be exercised.

Judicial Principles

The matter has received attention in the Supreme Court more than once. Initially the Court held that the action of the Legislature cannot be challenged on the ground of violation of either Freedom of Speech (Art 19 (1) (a)) or of Personal Liberty (Art 20-21) *Sharma Vs. Sri Krishna*, AIR, 1959 SC 395. However, in a subsequent decision, the Supreme Court held that violation of Personal Liberty could be inquired into by the Court. If the person is arrested for something said or done outside the House (Art 143 and AIR 1965 SC

745).

In general, the courts have taken the view that the question whether a particular privilege exists can be looked into by the courts in writ petitions challenging legislative rulings or privileges. But if the privilege claimed is found to exist, then the mode of its exercise will neither be investigated into nor debated before the courts.

Illustrative cases

The nature of conflicts that arise between the courts and the Legislatures in this sphere can be well-illustrated by taking up two actual cases, which came up before courts.

(i) A journalist published certain portions of the proceedings of the Bihar Legislature, although the House had expunged those parts. He was served with a notice issued by the House. The notice laid the charge that he had infringed the privilege of the House by publishing expunged portions of its proceedings. The notice called upon him to show cause why appropriate action should not be taken against him. The journalist moved before the Supreme Court a petition under Art 32 of the Constitution asserting that his right to Freedom of Expression had been infringed by the threatened action. The Supreme Court, however, dismissed the petition and held that the action of the Bihar Legislature, which had been taken by virtue of a power directly conferred by the Constitution (Art 194) was not subject to challenge under Art 19 (1) (a) of the Constitution (Freedom of Speech). The British House of Commons possessed the absolute power of prohibiting the publication of proceedings, and the Bihar Legislature was exercising only that well-recognised power under Art 194(3) of the Constitution. The position would be different if a law is made by the Bihar Legislature, defining or codifying its privileges (*Sharma Vs. Sri Krishna* AIR, 1959 SC 395).

(ii) The latest case of conflict comes from J & K. The Legislative Assembly in J & K on Sep 3, 1985 took a stand (by majority) that the House was supreme and the Assembly would not follow the High Court's direction to the Speaker's counsel to produce relevant proceedings of the House of Aug 17, when three Opposition members were suspended for the rest of the session (Press Reports, Sep 4, 1985). The members moved the High Court for interim stay of Suspension order but the Assembly refused to comply with the stay.

The above illustrative cases show that so long as the present position continues the scope for conflict is unavoidable. Nevertheless, if the privileges of the Parliament and state Legislatures are codified by legislation, the scope of controversy may get reduced.

"INDIAN NATIONAL CONGRESS: GAINS AND LOSSES"

The Indian National Congress has just completed its centenary celebrations and has faced many highs and lows in its hundred-year chequered history—a history which is closely interlinked to the history of India itself.

The Congress has many gains and losses to its credit now. *CCTimes* announced an essay competition on 'Indian National Congress—Gains and Losses' in August 1985. The response from the readers was overwhelming. From the wide range of interesting entries received, here are excerpts from the best three.

Congratulations to the winners from *CCTimes* and for the others its better luck next time!

"Within ear-shot of its centennial year, the old Indian National Congress may either rise as the phoenix from its ashes or forever be forgotten," said M.V. Kamath in *Debonair* early in 1984. Now that the much-awaited year has arrived, the debate is still on whether the 'old' Congress deserves an eulogy or an elegy. One thing, however, is clear—the Congress, as it is today, can either be praised or criticised—it just cannot be ignored. It was and is an inextricable part of India.

Few parties can equal the awe-inspiring record of the Congress. Gautam Adhikari in *The Times Of India* rightly divides its history into eight phases—each with its own gains and losses. Starting as 'the Kumbh-mela of the educated' (1885-1905), it graduated to extremism (1905-20) under Bal, Lal and Pal and became, under Mahatma Gandhi, the party of the masses, by the masses and for the masses (1920-47). Resisting Gandhi's suggestion of liquidation after independence, the fighter for freedom became the ruler of a nation under Nehru (1947-64). The next few years (1964-69) were the hey-days of the 'syndicate' which lost out to Mrs Gandhi after the legendary split. The age of 'Indira is India' was followed by the age of Sanjay Gandhi and his cronies. And now, it's over to Rajiv Gandhi and his 'computer boys'.

However, the party has won many a laurel for itself and the country. In the turbulent pre-independence era, it was the Congress that made a tryst with destiny and tackled the most complex divorce in history—the partition.

The feathers in the Congress cap are truly numerous. Yet, it was this very Con-

gress of which Nehru remarked as early as in 1949—"The Congress is simply fading before my eyes... There is no sense of discipline left, no sense of common effort, no cooperation, no attempt at constructive effort..." The emergency imposed by Mrs Gandhi left poignant memories. More recent and more revealing are the wanton loot and licentiousness the students' wing of the party indulged in its Nagpur session.

A corrupt and red-taped bureaucracy, a politicised army, a committed judiciary and a lumpenised system are but a few contributions of the Congress. Add to this the Presidentialisation of the office of Prime Minister, the gradual erosion of state autonomy, the cult of sycophancy and the use of money power, media power, muscle power and ministerial power in elections and the picture is complete.

However, the Congress alone cannot be blamed for its blemishes and blunders. As Acton says—"Power corrupts and absolute power corrupts absolutely." Laxity of public opinion and the virtual absence of an Opposition has made Congress the giant of Indian politics. Thus, if the Indian democracy is to breathe and bloom, eternal vigilance and a strong Opposition are absolutely essential. As for the Congress itself, its members have eulogised, romanticised and 'mythologised' it long enough. Hats off to the Congress plan of cleaning the administration, but charity should begin at home.

First Prize: Rs 150

Mahima Saxena, Jaipur

The Congress Party has undergone many transformations during its century-old history. It started as a forum for educated, middle-class interests to demand participation of Indians in the administration. The party had a democratic leadership with decisions based on consensus and tolerance of dissent. This was evident from the presence of both the moderate and extremist factions within its fold. But the difference in aims and methods were reconciled by the selfless, dedicated and enlightened leadership in working for the goal of independence.

The gains made by the Congress include the salient one of leading the country to independence. It has provided India with a stable leadership during the post-independence era. Democracy has taken strong roots in the country. India remains a secular state, dedicated to the socialist path of development. The country

has achieved self-sufficiency in food production and is one of the leading industrialised nations.

The losses suffered by the Congress include the growth of corruption, violence and communalism in politics. "The leadership has become more and more centralised and authoritarian in nature. There is increasing intolerance towards the Opposition. There is growing suppression of dissent within the party. Instead of clear, well-defined principles, reliance is placed on populist slogans, gimmicks and propaganda to win elections. The greatest decline is in terms of motivated, committed and selfless leaders...."

Thus, though the Congress has succeeded in maintaining the democratic polity of a united and integrated country, it has been at the cost of centralising the quasi-federal structure, leading to the growth of discontent, communalism and violence in the country.

Second Prize: Rs 100

Jai Raj Kumar, Delhi

In 1985, the hundred-year-old Indian National Congress has been able to build up a monolith in a country which boasts of a multi-party system. It is time to take a look at the balance-sheet of the party which, to a great extent, has determined the destiny of India.

Established at the insistence of Viceroy, Lord Dufferin, it was destined to be the party which would lead India to independence only 62 years after its foundation. The Indians were seeking to relieve the Britishers of 'the white man's burden' and the Congress was their mouthpiece. The party was distinguished for its leaders who never tried to project themselves as supreme powers. It is true that at one time or the other leaders like Gandhi became indispensable for the Congress. But who had heard of slogans like 'Mahatma is Congress' and 'Congress is Mahatma' at that time?

...In the post-independence period, the country continued to gain through the Congress.

However, a subtle change was taking place on the Indian political scene at this time. Hypocrisy, sycophancy, selfishness and corruption were gradually increasing among the Indian politicians. The Congress politicians were not immune to this. Today, this negative trend has reached its culmination. The Congress Party which continues to rule India with only one short interruption, has not been able to get rid of self-seeking politicians....

In spite of all odds, the Congress has managed to stay in power. Unfortunately, this very political reality has become a potent cause for the pollution of the party.

Third Prize: Rs 75

Dipanker Sinha, Calcutta

PERSONALITY DEVELOPMENT

Preparing For An Interview-3

BY PRABHA GOPAL

High qualifications and intellectual ability are not necessarily two sides of the same coin. In fact, a person with an average percentage of marks and fewer degrees to boast of may prove to be more intelligent and capable in the practical application of his knowledge—both in everyday life and at his place of work.

No wonder reputed employers today judge a candidate's basic understanding of his subject of specialisation rather than assess him on the basis of his decorative degrees or a stunningly-high percentage of marks. What with academic standards varying from one educational institution to another, employers are being doubly careful in testing the candidate's mental faculties so as to judge whether education has actually disciplined his mind to think correctly, consistently and logically.

Know Your Basics

The initial part of this take-off stage of the interview comprises questions on the basics of the candidate's subject of study. A student of Economics may, for example, be asked as follows:

"Could you explain to a layman, in simple words, what is Economics?"

"Economics is a social science concerned chiefly with the way society chooses to employ its limited resources, which have alternative uses, to produce goods and services for present and future consumption."

"What is direct tax?"

"A tax that is not shifted—that is, its burden is borne by the persons or firms originally taxed. Income-tax, for example, is a direct tax."

"What is liquidity?"

"Ease with which an asset can be converted into cash quickly without loss of value in terms of money."

If it is an interview for a bank job the interviewer may continue as follows:

"What do you know about the World Bank?"

"It is an international bank which finances basic development projects such as dams, communication and transportation facilities. It was established by the UN in 1945 to provide loans for postwar reconstruction and to promote development of less developed countries."

Again, a Political Science student, for example, may be questioned on his understanding of concepts like the state, sovereignty and the government. The answers are expected to be short and precise, as follows:

"State is an assemblage of human

beings, occupying a definite territory, organised under a government and subject to no outside control."

"Sovereignty implies a state with internal authority which is supreme and independent of all external control."

"The government is an agent of the state which is entrusted with the task of making laws for its proper governance."

A board member may also test the candidate's knowledge of constitutional provisions by posing the question:

"What is your understanding of the role of state governors in India?"

"The Governor is appointed by the President on the advice of the Central Cabinet. He is the agent of the Centre who sees to it that the state government functions within the framework of the Constitution. The governor also has a number of discretionary powers under Art 356 according to which he can report to the President that the constitutional machinery of the state has broken down. In such cases the Governor can suggest imposition of President's rule in the state. However, in the last three decades, the role of governors has been the subject of major controversy in West Bengal and Andhra Pradesh where the governors have served as tools of the Central ruling party."

Knowledge Application

Book knowledge is no knowledge unless a candidate has the ability to utilise what he has learnt. In this part of the interview the candidate may be tested as follows:

"How will your knowledge of chemistry help you in your administrative career?"

"Chemistry may not directly help me in my career. But the scientific approach I have developed will be of much help to me wherever I go."

A candidate being interviewed for a technical post, say in an atomic power plant, may be asked about the direct application of his scientific knowledge in his field of work.

"As a student of Physics can you tell us what you understand by a reactor going critical?"

"The moment an atomic reactor starts functioning and produces nuclear energy it is said to have become critical."

"Can you tell us what is a fast reactor?"

"A nuclear reactor in which little or no moderator is used is called a fast reactor. Here the fission is caused by fast neutrons."

Local Problems

At the final stage, candidates are tested not only on their knowledge of national or

international issues but also on their awareness of local problems. For example, a candidate from Tamil Nadu may be questioned on the age-old language problem.

"Do you think that the allegation of the DMK party that Hindi is being imposed upon them, indirectly, through TV serials is justified?"

"Well, I personally feel that it is justified to a certain extent. The new relay centres whether in southern India or in eastern India are hooked up by the national network and hence people are forced to watch the Hindi programmes relayed from Delhi. But a person living in a small town, in the south for example, would feel at home watching programmes in his regional language rather than watching a Hindi programme."

"Can you offer a solution to the language problem?"

"Since English is an international language, it would be more appropriate to use it as a link language within the country. English will be more easily accepted by a majority of Indians as compared to any Indian language, including Hindi, which is considered a language of the Hindi-speaking states in India. The regional languages can continue to be used within the state and the combined use of English will facilitate day to day functioning."

Similar questions on the candidates' in-depth knowledge of local problems will take the candidate to the final winding-up stage of the interview. However, the interviewers would have almost made their choice by now and the final winding-up stage would be more often a test of the versatility of a candidate and his ability to undertake additional responsibilities in an organisation.

(To be concluded)

ESPECIALLY YOUR S, ENGLISH

Timely help is CCTimes' top priority, particularly if it concerns the future career of young men and women. And with the bank exams just round the corner we were contemplating to bring out an English Special based on the questions posed in these exams.

How would you accept the idea? Would you welcome it? Or would it not make much difference to you? Please hurriedly write to us before Nov 7, 1985, so that we would get into action if most of you favour the idea.

CIVIL SERVICES (MAINS)

(Continued from page 19)

- Regulation of pesticides and insecticides used for agriculture so that the surface run-off from cultivated areas does not flood these chemicals into the river.

- Attempts will be made to raise the purity level of the water to make it uniformly drinkable.

The Ganga Action Plan also outlines a scheme for energy generation whereby the sewage can be converted into bio-gas and manure, from the sale of which a net profit of Rs 11 crores annually can be obtained which will be recycled back into the project for the maintenance of the sewage pumping and treatment plants. The major by-products of sewage treatment would be methane, bio-gas, manure, poultry feed and fish.

The international community has also shown interest in the Ganga Project. France has extended technological and financial assistance in cleaning the Ganga at Varanasi. Similar promises of assistance have been made by the World Bank, USA, The Netherlands and the Thames Water Authority, England.

ANITA NARAYAN

INDIAN CLASSICAL MUSIC

Indian music, which traces its source to Brahma, the creator is believed to have been revealed to men through the sage, Bharata. Although the earliest evidence of Indian music is found in the Sama Veda, it is not until the 2nd century B.C. that a detailed written record was available in the Natya Shastra of Bharata.

Indian music underwent substantial change during Muslim rule with Arabic and Persian strains being harmonised with it. However, the revival of Indian classical music in the present century is greatly due

to the pioneering work of two musical scholars—Vishnu Digambar Paluskar and Vishnu Narayan Bhatkhande.

Indian classical music is generally divided into Hindustani (North Indian) music and Carnatic music. The principal forms of Hindustani vocal music are dhrupad, khayal, tappa and thumri.

Dhrupad, which originated around 500 years ago is believed to have been introduced by Raja Man Singh of Gwalior, though it was perfected by Tansen. Khayal, was created by Amir Khusro in the 13th century, who also contributed the ghazal and the tarana to Indian music. Tappa, which is in Punjabi was originally the song of the camel riders of Punjab. It has been greatly developed by Shorimeen, a Punjabi composer, whose real name was Ghulam Nabi. Thumri, which is generally a love song, arrived on the musical scene in the 19th century. It is believed to have been created by Nawab Wajid Ali Shah. The major forms of instrumental music include alap, jod and jhala.

Carnatic music traces its development to Purandara Dasa in the 15th century. It was perfected by the three master composers—Thyagaraja, Muthuswami Dikshitar and Shyama Shastri.

Some of the contemporary exponents of Hindustani and Carnatic music are as follows:

Bismillah Khan	Shehnai
Hari Prasad Chaurasia	Flute
Ravi Shankar	Sitar
Nikhil Bannerjee	Sitar
Budhaditya Mukherjee	Sitar
Rais Khan	Sitar
Shiv Kumar Sharma	Santoor
Imrat Khan	Sur-bahar
Asad Ali Khan	Rudra Been
Ali Akbar Khan	Sarod
Amjad Ali Khan	Sarod
Vilayat Khan	Sitar
Chitti Babu	Veena

V.G. Jog	(Carnatic)
Debu Choudhary	Violin
Kishori Amonkar	Sitar
Pandit Jasraj	Vocal (Khayal)
Bhimsen Joshi	Vocal (Khayal)
Arinuddin Dagar	Vocal (Khayal)
M.S. Subbalakshmi	Dhrupad
Balmurali Krishna	Vocal (Carnatic)
Siddheswari Devi	Vocal (Carnatic)
Fayaz Khan	Thumri
Zakir Hussain	Tabla
Shataat Ahmed Khan	Tabla

INDIAN CLASSICAL DANCE FORMS

India has a rich heritage of classical dance forms which are more than 2,000 years old and believed to be among the oldest in the world.

(i) Bharata Natyam—less commonly

known as *Dasiattam* (dance of slaves) has its origins in the classical Dravidian culture of South India. It was performed in temples by *devadasis* who were trained by traditional dance teachers called *natuvanars*. There are several outstanding performers of Bharata Natyam in India such as Yamini Krishnamurthy, Padma Subramaniam and Leela Samson.

(ii) Kathakali—a traditional dance form of Kerala, is an intricate combination of dance and drama. Contribution towards reviving this dance was made by Mahakavi Vallathol Narayan Menon, in 1930, who established the Kerala Kala Mandalam in order to promote Kerala's culture. Kathakali is exclusively performed by males, who play the female roles as well. However, *Mohiniattam*, a distinctive variant is performed by women. Kathakali dances which are usually based on stories from the Ramayana and the Mahabharata, are enacted to the music of percussion instruments such as the Chanda and Maddulum.

(iii) Kuchipudi—a classical dance form which originated in Andhra Pradesh has been popularised by Radha and Raja Reddy.

(iv) Odissi—originally performed in the temples of Orissa by women called *maharis* was performed later by young boys known as *gotipuas*, many of whom have become eminent teachers of Odissi dance today. The Puranas and the Geet Govinda are the sources from which the themes of Odissi originate, though ancient writers attribute the origin of Odissi to the cosmic dance of Shiva. Among the renowned exponents of Odissi are Kelucharan Mohapatra, Sanjukta Panigrahi, and Sonal Man Singh.

(v) Kathak—originally the dance of the story-teller or *Kathiko*, who narrated the familiar stories from Indian epics through dances, songs and mimicry. As a dance form it was popular in northern India. However, when the north came under Muslim influence it was divorced to a large extent from its Hindu religious content. Kathak dances belong to many *gharanas* or schools each with its distinctive style such as the Lucknow, Jaipur and the Benares *gharanas*. It is performed by both men and women, and the notable performers of India include Birju Maharaj, Shambhu Maharaj, Lacchu Maharaj, Sitara Devi and Uma Sharma.

(vi) Manipuri—a dance style performed by both men and women—has its source in the Manipuri folk dance and combines the themes of both Manipuri folklore and Hindu mythology. This dance form which is a graceful art has special significance for the Manipuri people. Rabindra Nath Tagore in his choreographies was greatly influenced by the Manipuri style of dancing.

A.N.

KIDSTUFF

Klinik-Rundschau, the first of its kind, and certainly very unusual, is a newspaper produced by child patients at a Tuebingen hospital in the Federal Republic of Germany. Stories, cartoons, drawings and poems contributed by sick children aged between three and 14, hog Klinik's pages. The publication's location is made clear by drawings on the title page of the second number of a thermometer, a hyperdermic needle and blood pressure apparatus. The newspaper stand is at the bed of a small boy 'treasurer'.

Klinik-Rundschau has been a runaway success with 200 copies of the first issue taken up so quickly that a rush 800 extra copies had to be printed, which is done free of charge in the clinic's printing office.

GENERAL KNOWLEDGE

Indian Education: A Statistical Study

The literacy level in India is still abysmally low. The 1981 census revealed that only 36.2% of the population was literate with the literacy levels of women and the people belonging to Scheduled Castes and Scheduled Tribes being only 24.9%, 24.1% and 10.4% respectively.

The rate of drop-out among children between classes I and VIII is above 75%. Again the rate is much higher for girls and for SC and ST children.

The number of children going to middle and secondary classes, however, has shown an increase from 22 lakhs in 1951 to 340 lakhs in 1983 and the country now has 1,75,000 schools as compared to 13,000 in 1947.

The number of students completing the higher secondary stage has risen from 2.37 lakhs in 1960-61 to 8.40 lakhs in 1981-82. And 83% of all those who complete the higher secondary stage seek admission in colleges and universities while only 20% of them are able to enter technical or professional institutions.

At the time of independence there were 700 colleges and 20 universities. Now there are 5,246 colleges and 140 universities with an enrolment of 33.60 lakhs of whom 9.76 lakhs are women.

The number of illiterates has actually increased between 1951 and 1981 though the

rate of illiteracy has declined. In 1951 there were 300m illiterates, now there are 437m illiterates. However, in 1951 only 16.67% of the population was literate while today 36.23% of the population is literate.

Female literacy in rural India varies widely between 64.7% in Kerala to 5.4% in Rajasthan. In Bihar and UP which together comprise 38% of India's rural population, the female literacy rate is a poor 9 to 10%.

If things remain unchanged India will have 500m illiterates by 2000AD.

While the literacy levels are uniformly low the quality of education is woeful: 9% of all primary schools have no buildings, 41.5% no blackboards, 72% no library facilities and 53% of them are without playgrounds. The expenditure on education has, however, mounted to Rs 2,304.16 crore in 1976-77 from Rs 114 crore in 1950-51.

The increase in expenditure on education has not been in proportion with the increase in the number of pupils. Therefore, the money spent on each pupil per annum has dropped. For college education it has fallen from Rs 330.9 to Rs 468.9; for professional education from Rs 1,640 to Rs 890. In the case of elementary education it has increased marginally from Rs 41.9 to Rs 55.2.

World's Highest Hydrel Project

About 1,500 workmen are toiling round-

the-clock to complete the world's highest hydroelectric project in one of the most rugged and inhospitable regions on the globe.

Once commissioned, the project is sure to revolutionise the economy and lifestyle of the people inhabiting Himachal's northern-most district bordering Tibet.

The project estimated to cost about Rs 13.58 crore, involves the creation of a small diversion on the Rongtong nullah before it falls into the Spiti river near Rangrik village.

The water is diverted through a 2,874-metre-long channel and a 254-metre-long tunnel into an open reservoir from where it is taken through penstocks to turbines for generating 2 Mw of electricity.

The water channel, tunnel and reservoir have been designed keeping in view the extreme conditions prevailing in the region. The channel is covered and the water reservoir is so designed that if most of it freezes during winter, there will be enough liquid to run the turbines.

The penstocks, too, which are being specially treated by a Pune-based firm, will be buried underground and insulated against cold.

Two megawatts of electricity is considered more than sufficient for the entire Spiti valley, which is sparsely populated. There are no more than 7,000 persons in the valley and only three villages—Tabo, Kaza and Kibber—have more than 100 houses.

You Ask We Answer

Explain the term 'tie-breaker' as applied in tennis.

Sanjay Taneja, New Delhi

Tie-breaker is a means for deciding sets that have reached a certain tied stage, such as 6-6 or 8-8. The idea of the tie-breaker was conceived by an American millionaire James Van Allen to introduce a shortened system and break the monotony of service-dominated matches and conserve the energy of marathon sets.

There are two forms of tie-break scoring. There is the Van Allen's method in which the number of VASs which is referred to after the game is played. The player, contesting points. Player A serves for points 1 and 2 and then in the next set, player B serves for points 3 and 4. Similarly A serves for points 5 and 6 and B for points 7 and 8. The score is 4-4 and the deciding ninth point is to be played, the receiver may elect to receive in whichever court of his/her side of the net he/she prefers. This system of the tie-breaker is, however, only popular in the US.

The 12-point tie-breaker, conceived in England and used at Wimbledon and in the Davis Cup matches is more popular. This becomes operative when the game score is 8-8. In a 12-point tie-break, player A serves from the right court for point 1, player B from left and right courts for points 2 and 3, player A in singles or C (in double) from left and right courts for points 4 and 5, then again player B in D (in double) from left and right courts for points 6 and 7 and so on. Players change courts after 6 points have been contested, and again after every 6 points.

As long as it is necessary, Game and set goes to the first player to win 7 points unless the points score is 6-6. Then play must continue until one player has a lead of 2 points.

What does the term 'ace' or 'double ace' mean in lawn tennis?

Ratan Tatarbe, Ranchi

Firstly, the game is no longer referred to as lawn tennis, as most tournaments are played on clay or hard courts or on artificial surfaces. Only Wimbledon and a few other tournaments are still played on grass courts. Hence, the game is now known as tennis and not lawn tennis.

An ace is a service winner that the receiver does not touch. A double ace is consecutive service winners of such a nature.

Who was the founder of cricket in the world? And how and when did it spread to India?

Krishnan Venkat Raman, Salem

Cricket grew most strongly in England but its precise origins are unknown. An apparent reference to its being played in Kent is contained in the wardrobe accounts of Edward I in 1300. There are references to the game of cricket in the reign of Elizabeth I and in the early 17th century when a historian refers to "the crooked staff wherewith boys play at cricket".

In many stages, cricket was a game confined to peasants. By the 18th century it spread to all parts of England, agricultural south and mid-England.

The first established cricket club was founded in Hampshire, in a village called Hambledon, the first known records of cricket are the matches played by Hambledon club. In the 1790s, cricket became popular in London, the Marylebone Cricket Club (MCC) was formed, which organised and drew up a uniform code of rules for cricket all over England.

A Parsi gentleman can be considered as the founder of cricket. It was an organised form of entertainment of the peasants and working classes in the East and became an organised sport since the inception of the MCC.

Cricket is a game of considerable antiquity, dating at least from 1771. For a long time, it remained a game and not until the 1840s did it become a game to take part in organised matches. Successive generations of aristocrats and distinguished patronage, and Indian princes used their wealth and power to spread the gospel of cricket at every level of society.

Parsi teams toured England in 1886 and 1888 and Vernon took out the first English team to India in 1888-89. In 1892-93 organised cricket tournaments started in India. There were a long series of Parsi-English matches played in Bombay and Poona between Europeans and Parsis, which became the Bombay Triangular tournament in 1907 with the entry of the Hindus. The Muslims entered in 1912-13 making the tournament quadrangular. To further popularise cricket in India, the Board of Control for Cricket in India started an inter-college competition in 1933-34 known as the Ranji Trophy.

NOVY KAPADIA

Coffee Break

NOTES FROM ALL OVER

Kiss Amiss

Machines can no longer be accused of being unfeeling and heartless. It takes very human displays of affection like kissing to turn them on—literally. For instance, a Japanese computer domiciled in Australia requires a wake-up kiss every morning from its owner to get activated.

The computers' carnal weakness is now being exploited to prevent computer thefts. Lip prints on the computer tell tales about the users and, therefore, act as a very revealing security measure.

However, Australian computer makers are planning to programme computers to recognise the users' smell, voice and even eyes—just in case the kiss is too fleeting to make a lasting impression on the computer.

The only drawback in this very 'physical' system of identification is that no thought has been given to the computer's infidelity. What if the computer decides it prefers someone else's kisses to its owner's?

Rasputin Reborn?

Seven decades after the death of Grigory Rasputin, the legendary charismatic monk of Russia, another religious mystic has stepped into his shoes. The Russian populace has given him its life savings and women have discarded their clothes for him—firmly convinced that by doing so they will be "purified".

Incredible as it may sound, in an officially atheist country, the spell that this tall, shaven-headed Mirzabai Kimbatbaev has cast over the masses is strongly reminiscent of that of Ras-

putin who had even influenced the wife of Czar Nicholas II.

For the last three years, Kimbatbaev has built up a reputation of being a mystic and healer. Surprisingly his cohorts include even the intellectuals and the scientists, besides the editor of a Moscow daily.

BIRTH OF A LEGEND

Rasputin, the charismatic and legendary Russian monk was the son of a poor peasant whose disorderly behaviour prompted his parents to christen him Rasputin, literally meaning 'debauchee'. He received no education and till the end of his life remained an illiterate. Till he reached the age of 33 he lived in his native village and married into a well-to-do family.

It was in 1904 that Rasputin resolved to alter his lifestyle. Deserting his family, he devoted himself to religious exercises, declaring to the masses that he was inspired by God. His passionate, ebullient nature, his great physical strength and the superstitious ambience in which he was brought up, gave an unexpected direction to his religious exaltation.

"Sin in order that you may obtain forgiveness"—was the practical rule which he preached. "A particle of the Supreme Being is incarnated in me," he told his spellbound cohorts. This extravagant and dangerous preaching brought him immense popularity and earned him the reputation of a 'holy man'. The doors of the Imperial Palace and all the fashionable cafés were thrown open to him.

Rasputin was also introduced to Czar Nicholas II and the Empress, who took tremendous interest in him. The mystic atmosphere which prevailed at the court and the constant fear for the health of the Czarvich created a favourable background for Rasputin. The eventual improvement in the health of the Grand Duke Alexis resulted in Rasputin wielding a commanding influence over the Empress.

But Rasputin's success at the court was arousing far too much jealousy among the court nobles. Subsequently, numberless stories of debauchery practised at the court, in which Rasputin's name was coupled with not only the Duchess but even the Empress, became a common topic in the Russian society. Eventually on Dec. 17, 1916, he was shot dead, bringing the legend to an end.

Neeta Lal, New Delhi

The authorities decided to act only when a girl under his influence apparently committed suicide. The controversial monk has now been put on trial though the charges against him have not yet been disclosed.

The superstitious streak in Russians explains why they resort to faith healers to cure their illnesses rather than doctors. One such famous healer, Djuna Davitashvili, a dark-skinned woman with long black hair and witch-like features, has been given official status at the Academy of Sciences, where her powers are being studied. Her past patients include Leonid Brezhnev. The print media has both attacked and praised her and it is against this background of official ambivalence that Kimbatbaev's success can be understood.

Kimbatbaev, born in a village in Central Asia was considered a good-for-nothing fellow until he met some pilgrims in the Uzbek town of Sultan Baba three years ago. He mastered some religious expressions, dressed up in a bizarre manner—with a skull-cap and beads, aping Rasputin and gathered a large following.

He created an image of asceticism and disdain for the mundane to influence the psyche of the masses and make them succumb to the vagaries of his emotions. And did "wonders" by cleaning the pockets of his followers saying that by doing so he was "cleaning" them to lead a "correct" life.

When women visited him he undressed them and went swimming with them in a pool while their husbands watched mesmerized.

Whatever the controversy that surround the charismatic mystic it cannot be denied that he continues to enjoy tremendous popularity among the masses. "He is the chiastest of men with a truly cosmic awareness," writes one of his female admirers.

Ode to Lady Liberty

The place—tiny Liberty Island in Upper New York Bay. The date—Oct 28, 1886. The event—unveiling of Frederic Auguste Bartholdi's monument to liberty and America's symbol of hope and welcome...the Statue of Liberty soared over the skyline, the tallest structure in the city. "Give me your tired, your poor, your huddled masses yearning to breathe free..."—verses inscribed on the statue's base echo the promise that brought to America's shore, over a span of some 60 years from 1892 to 1954, more than 17m downtrodden from every corner of Europe and from every continent. Some were fleeing poverty; others persecution.

A hundred years have passed...almost half of today's Americans are descended from someone who participated in this flood of immigration. It is a fitting tribute to America's heritage that on the eve of Liberty's centennial anniversary, all segments of American society are committing themselves anew to principles that will endure by enabling the project for the statue's renovation to be financed by private donations; recent immigrants, families long rooted in America, senior citizens and young students—all share the same desire to celebrate the American ideal of freedom and opportunity for everyone. It is this ideal that lured America's people to the young nation; it is this ideal that is embodied in the Statue of Liberty—formally

entitled "Liberty Enlightening the World" by its sculptor—though its slightly stern visage makes it abundantly clear that the streets were (and are) paved with gold only for those willing to work hard and adhere to the principles she represents.

The idea for her creation had its origin in the fantasy of Edouard de Laboulaye, a French legal scholar and professor. He believed that a century of friendship between the US and France—a friendship begun in the alliance that made American victory possible in its war for independence from Great Britain—called for a splendid memorial. Moreover, the founding revolutions of both the French and American republics shared a central ideal: liberty. It was during an after-dinner conversation with Bartholdi that de Laboulaye broached his idea.

Assembled first for display in Paris, the Statue of Liberty was dismantled, packed in 200 wooden crates, and shipped to America; and in October, 1886, Liberty took up her post as the nation's gatekeeper. Dense scaffolding now disguises the familiar icon, and her torch has been removed entirely. All 1,600 iron ribs inside the statue are being replaced with stainless steel ribs, the interior of the 46-meter-high pedestal is being renovated to reveal its architectural splendour and the torch—which at one point was enlarged, punctured by windows and illuminated—is being replaced by a solid, gilded version more closely resembling Bartholdi's original. Renovation is expected to be complete by Jul 4, 1986, in time for Independence Day celebrations, and in plenty of time for Miss Liberty's 100th birthday.

A Dog's Life?

American pets are basking in glory as they are reported to have their own dentists, psychotherapists, acupuncturists and insurance brokers. Their meals are supplied by the local delicatessens while their clothes are designer-made.

For anyone interested in catering to the needs of cats, dogs and goldfish, the future looks quite rosy in the US. The *Wall Street Journal* recently quoted the example of a New Jersey lawyer Edward Cooperman, who shelled out a cool 100,000 dollars in vets' bills for his Spaniel.

The dog in question, Cuddles, was afflicted by cancer. He was operated on at the prestigious Animal Medical Centre in New York; underwent chemotherapy at the University of Colorado and surgery at the University of Georgia. Cooperman had no regrets, for Cuddles, who has been owned by him for 14 long years is, according to him, his "best friend in the world".

For less serious ailments the fees in animal hospitals are more moderate but still cost the earth. While a cataract operation for a dog costs \$500, a mere consulta-

tion with a psychotherapist costs \$35. Hotels for dogs offer rooms fitted with a colour TV and carpets or \$40 a night. A special department store in New York, Macey's, stocks a wide range of clothes for pets, from jogging outfits to late evening dresses.

Pat Henderson, who has been dubbed the "Dior" of doggie fashion, sells coats in cashmere, mink, tweeds or little numbers in satin to such celebrities as Elizabeth Taylor and Egyptian President Anwar Sadat's widow Hihane.

However, for man's best friend nothing is too good. For according to Pat, "People love their dogs; when someone buys a cashmere coat for their dog, they are not displaying their wealth but their love."

JOURNEY TO THE HEART OF A COMET

The politicians orate, but the scientists collaborate. An academician, Harold Seggley, of the Institute for Cosmos Research in Moscow explained, when the Americans learned that the Russians planned to send two space vehicles to intercept Halley's Comet in 1986, NASA cancelled its own project. Instead the US space agency has now spent more than a million dollars on modifying its deep-space tracking network so it can help the Soviet spacecraft make a closer rendezvous with the comet.

In December, 1984, two unmanned Vega spacecrafts blasted off from Soviet Central Asia, one week apart, on an 18-month mission that will take them past the planet Venus (where they will both drop balloon-borne probes into the atmosphere) and then onwards into the heart of the comet.

Seven months behind the Vegas, in July, 1985, the Europeans launched a British-built spacecraft called Giotto which will follow a different orbit and pass even closer to the comet's nucleus—only 1,000 km—a day before the first Vega makes its nearest approach. A Japanese spacecraft, Planet A—will pass by at about the same time and meanwhile an American probe will be skimming past another comet which travels under the improbable name of Guadalupe Zinner.

The rendezvous with Halley's Comet will be a brief event, for it comes barreling in towards the inner solar system cutting across the orbits of the planets, at an enormous speed that increases as it nears the

sun. Moreover, it is travelling around the sun in the opposite direction to the planets, and though it reappears regularly every 75 years its precise path is different each time because the gravitational fields of the planets shift it slightly.

Even if all the last-minute course corrections work, the various spacecraft sent to visit Halley's Comet will pass by at around 45 miles per second (70 km/sec), and will be gone almost before they arrive. Yet it is our first chance to see what a comet is really like, and we need to know.

It has gradually dawned on us over the past few decades that the solar system is not just the familiar nine planets trundling around the sun at relatively close range, with the odd comet and asteroid for variety. Far out in interstellar space, 1,00,000 times farther from the sun than ourselves, is the Oort cloud, a vast sphere of billions of

comets following their lonely, immensely long orbits around the sun.

Most of them will stay out there forever, insubstantial and invisible from the earth. But occasionally something jars one out of its orbit and sends it diving into the inner solar system. As it nears the warmth of the sun the frozen gases which make up most of its mass begin to thaw, and stream out behind it in a shining tail up to a hundred million kilometres long.

Once this happens a comet's lifespan is limited, for on each approach to the sun more of its gases are heated up and blown away by the sunlight. Halley's Comet must already be well into this process of attrition, having swung past the sun once every 75 years since it was first seen in 1066. But the great question is: is there anything solid in the heart of comets?

If a comet is just "a bagful of nothing"—a loose collection of tiny dust and ice particles—then comets could never pose a problem for us. But if comets have a large solid nucleus, as much recent scientific speculation has suggested, then that is an entirely different matter.

Since 1980 the theory has been gaining ground that the mass extinctions of plant and animal species that have occurred repeatedly in the history of life on earth are linked with the impact on earth of large chunks of debris such as may lie at the heart of comets. The last great slaughter of species happened 65m years ago, when the dinosaurs disappeared, but similar mass extinctions seem to have been occurring about every 250m years since life first appeared on the planet.

Lesser catastrophes have been decimating earth's life regularly every 28-32 m years, and it is now suspected that the reason may be periodic disturbances of the Oort cloud that send showers of comets into sunward orbits. Just one piece of debris less than 10 km across, striking the earth at cometary speed, would release more energy than all the nuclear weapons in existence, and change the climate more drastically than the much discussed 'nuclear winter'.

Recently Roman Smoluchowski of the University of Texas has pointed out that these cycles of catastrophe synchronise with the sun's orbit around the galactic centre, which periodically passes through areas where the dust clouds are much thicker. The solar system passes through the mid-plane of the galaxy every 250m years.

The suspicion is that far larger numbers of comets are sent plunging in towards the sun during these passages, and that the earth rarely escapes being hit during these bombardments. But it's all theory at this point, because we don't know if comets have solid centres. The spacecraft that pass by Halley's Comet should give us the answer.

P.S. It will be 21m years before we next pass through thick dust clouds (but on the other hand, that's just when the comets may be most numerous—every new comet may be a potential danger).

Gwynne Dyer, London

Stars And Careers

SCORPIO

If you were born between October 23 and Nov 21, the Sun at the time of your birth occupied the zodiac sign Scorpio, which is by far the strongest and most extreme sign of all. Scorpions have great strength of will and positiveness of character, making them strong, determined, firm, dignified, controlled, reserved, tenacious and magnetic. They have fertile imagination and sharp intelligence. They are also tactful, discreet and cautious. Though fond of approval, they are not easily swayed by other people. Mars ruling this sign, makes people born under it very shrewd, passionate and jealous. They can be generous, fan club and devoted friends but dangerous and rather unloving enemies. Having the ability to withstand continued excesses, Scorpions can go places if they act judiciously and keep their impulsive nature under check.

Scorpions generally enjoy good health. They will be fortunate in financial matters. They may gain through foreign dealings or by travel and also in pursuits connected with law, food, clothing, etc. Careers in military, medicine, insurance, railways, steam engines, labour departments, enterprises dealing in tea, coffee, tobacco, copper, tin, parboiled rice, mine ores, excavation detective service, etc are likely to attract their attention.

Normally, Mars, the owner of Scorpio, remains in one sign for about one and a half months. But during 1986 it will remain in Capricorn from Mar 28 to Oct 9, 1986. This position will give Scorpions tremendous energy, self-confidence and help them in arriving at correct decisions. The quantum of achievement, however, will be proportionate to their efforts.

Jupiter will remain in its own sign from Feb 21, 1986 for about one year. This will improve the Scorpions' financial position beyond their expectations. Their social circle will expand qualitatively and quantitatively. This position also results in the addition to the family by way of marriage or birth. Sun will become very helpful around January, February, March, April, August and September. These months will prove fortunate in regard to career, social status, establishment of good rapport with superiors and elders and success in competitions. In short, 1986 will be a very fortunate year for Scorpions.

Death Wish

Teacher: Did you write this poem yourself?

Student: Yes, every word of it.

Teacher: Then I am glad to meet you, Edgar Allen Poe. I thought you were dead long ago.

HAIL A COMET

After 76 years, Halley's Comet is once again nearing its closest proximity to the sun. An event scientists are eagerly looking forward to. In July this year the Europeans launched the Giotto probe which is expected to pass within 100 to 500 km of the nucleus of Halley's Comet. Giotto, named after the 14th century Italian artist who painted the comet, will be conducting as many as 10 experiments during the few hours it takes to cross the comet's orbit. These will include examination of the chemical composition of the almost 2,00,000 km dust and gas layer that surrounds the comet's solid nucleus, examination of the neutral gases and ions, measuring the magnetic field in the area around the comet and mass spectrometry of the dust envelope. Scientists are also interested in the influences the sun exerts on Halley's Comet's periphery. The Giotto probe will also be transmitting photographs of the comet's nucleus back to earth. An incredible feat considering that it will fly at a speed of nearly 69 km per second!

The names of 25 Indian personalities (politicians, sportsmen, writers, actors/actresses, bureaucrats, diplomats, technocrats, performing artistes (?), service chiefs, who were in the news in the recent past, are hidden in this grid. They have been set horizontally, vertically or diagonally, forwards or backwards. No letter has been used more than once. Can you spot them?

P.S. In *Word Play-2* (CCTimes, October '85) a part of the clue—"Indian state *capitals*"—was inadvertently omitted. Yet, our readers were quick to catch on and mail in innumerable correct entries.

HOW TO ENTER

- Print the answers neatly in capital letters along with your name, age and address. Each Word Play and Apperception entry must be written **only** on postcards.

- You must send in any number of entries, but each must be numbered accordingly and accompanied by its respective COUPON.

- Though all your entries will be included in the draw of lots, you will be entitled to only one prize—the highest in case you're getting more than one.

Closing date for the contests: November 25.

Address your entries to: The Editor, Career & Competition Times, 10 Daryaganj, New Delhi-110 002.

Solutions in January.

OBSERVE & DESERVE

IMAGE

Meher is obviously admiring herself. And why shouldn't she? Considering Mother Nature's magnanimity towards her. By the way, in case you are looking for some mistake in the sketch, you are on the wrong track. So explain what you have observed in not more than 20 words. VIJAY hopes that most of you will hit the nail on the head.

PRIZES

WORD PLAY-3:

2 First Prizes

Jack Higgins' *Confessional*, Desmond Bagley's *Juggernaut* and Robin Cook's *Mind Bend* from **Rupa & Co., New Delhi** to the first two **all-correct** entries (**one-error** entries if there are no all-corrects) pulled out of the hat. **Plus 5 Consolation Prizes**—Desmond Bagley's *Night Of Error* from **Rupa & Co.**

APPERCEPTION TEST-6:

10 First Prizes

An exciting package from **Rupa & Co., New Delhi** to the **correct** entries pulled out of the hat.

SOLUTIONS

APPERCEPTION TEST-4:

The hilly, tortuous road evoked some outlandish explanations: "The car cannot leave tyre-tracks on a road carved out of the cliff." "As the car is moving away from the reader, and is keeping to the left, it is 'behaving' scientifically." But the smart ones sew through Vijay Konwar's details and peered down the tyre-tracks and came up with the right answer: "There should have been four impressions of tyre-tracks on the road—two of the front wheels and two of the back wheels."

Winners

1. K. Anjaneyulu, Ongole (Tq), Prakasam Distt. (A.P.). 2. M.A. Kishore, Hyderabad. 3. Subrat Kumar, Sundar Ray, Delhi. 4. S. Rajarajan, Trivandrum. 5. Dinesh Prekash Goswami, Allahabad. 6. THE TAX AXE

The reward of energy, enterprise and thrift is tax," wrote William Feather. On the other hand Justice Oliver Wendell Holmes said, "I like to pay taxes. With them I buy civilisation."

Taxes were levied in India even during the days of Kalidas and the houses of tax-evaders were raided to unearth wealth accumulated through improper means. Such raids are mentioned in *Raghuvansh* and other works of Kalidas. The words *vritti*, *uphar*, *upalaa* and *balmar* were used in the works of the poet to convey the meaning of taxation.

Paying informants a certain percentage of the amount recovered from income-tax evaders is a common practice in many countries. The greatest amount paid for information concerning a case of income-tax delinquency was 79,999.93 dollars paid by the United States Internal Revenue Service to a group of informants. It has been found that such informants are often low-income accountants or women scoundrels.

Not all nations burden the people with taxes. There is no income-tax paid by the residents on the 1,062.4-acre Lundy Island off North Devon, England. In Bahrain, Kuwait and Qatar the rate of tax regardless of income is nil.

Michael R. Patrao, Mangalore

MAN MOUNTAIN CAUSES JAM

The world's tallest man, Alam Channa, caused traffic jams when he walked down New York's Fifth Avenue and lunchtime crowds milled around him.

Channa, a Pakistani, who stands eight feet and three inches, is currently visiting the US. Dazed Americans jostled on Thursday (Aug 24) to shake hands with the 400 pound Channa as American television crews and photographers recorded the event.

"I thought I was tall", explained a six-foot basketball player straining to look at Channa's face.

Mohsin Ali Khan, Orissa
From *The Statesman*

DEATH-STAR

A controversial new theory regarding the cause of the sudden extinction of dinosaurs has been propounded by the US scientists. It was the solitary instance of mass eradication of living species on earth. It has been happening in a regular, periodic fashion, every 26m years.

According to this theory, the cause of the cyclic mass death is a dim, dwarf star that is a companion to our sun. This star is supposed to be revolving in an elliptic orbit outside the solar system. The periodic encounters with the periphery of the solar system every 26m years result in a deadly unleashing of millions of

comets, some of them striking the earth. Consequently the atmosphere is freighted with the clouds of dust particles and water vapours due to the tremendous explosion. This leads to the blocking of sunlight for months which generates violent alterations in the climate and photosynthesis inconducive to the sustenance of life forms.

The scientists and astronomers are trying to seek out this star in the universe. If found, they propose to name it 'Nemesis', after the Greek goddess who relentlessly persecutes the excessively rich, proud and powerful (a reference to the dinosaurs).

ONE-MAN PARTY

Computer buffs know a fancy word, 'teleconferencing', that denotes ways of running meetings between people, even though they may be separated by hundreds of miles. Computer-controlled communication links now allow groups of people to converse without their travelling to the same geographical location. And, what's good for business is good for pleasure: you can run a party with only you there! In a different context, Andy Warhol once talked about attending a party where only he was present. In the US this type of facility is offered on a practical basis. The Compuserve company is happy to connect people, via an information service, to other owners of computers and terminals. Hence the engaging advertising blurb: 'Last night, we exchanged letters with mom! then had a party for 11 people in nine different states and only had to wash one glass... And you can use a scramble if you have a secret you don't want to share too widely.'

Rajasekhar L. Rao, Surat

BULLET-PROOF FLAB

A 208 kg (450-pound) man failed to die after a Massachusetts state trooper shot him eight times. Lawrence Bell, 24, had 16 entrance and exit wounds in his chest, abdomen, right arm and scalp.

The surgeon who operated on Bell said his fat acted like a sandbag, preventing the bullets from hitting his vital organs.

A police spokesman agreed. The eight bullets did little damage. "They just went around in his fat."

Ashish Jain, New Delhi

THE ROBOT THAT SNEESES

Our noses recognise up to 1,000 different smells, and identify combinations of these smells. Surprisingly, this olfactory feat is accomplished with only a handful of gas sensitive nasal sensors—the olfactory receptors. These send signals that are first processed and then stored by the brain.

So how is a robot going to simulate these functions? Instead of human olfactory receptors, the robotic nose will consist of a bunch of tiny, gas-sensitive semi-conductors. These, which are nothing but bits of corroded metal wired with microcircuitry, detect a given smell by reacting to its gases. In the presence of a particular gas, certain semiconductors send impulses to the robot's brain, which is, of course, a computer. And depending on which semiconductors emit an impulse, the computer can detect the gas present.

There are simply no tricks to INSTA-MEMORY

The trouble with most memory systems is that they try to train your memory without removing the mental 'road blocks', without activating its inherent power, without giving it a chance to come into its own. The result usually is disaster... no real gain beyond (perhaps) a bag of memory tricks for after-dinner entertainment.

INSTA-MEMORY is Permanent Memory. Because Insta-Memory does not give you awkward and troublesome memorization gimmicks. Instead, you'll learn the Extrasensory Instant Recall Technique that literally turns your memory into a power-packed mental magnet... makes forgetting virtually impossible.

INSTA-MEMORY is Automatic Success Power. In just a few hours after you master the simple Insta-Memory secrets, you'll be able to instantly memorize 20-digit numbers like 18765439086543214569 and recall them effortlessly a month later. Remembering telephone numbers and names will be no trouble at all.

INSTA-MEMORY is Effortless Memory. Insta-Memory requires no energy-draining efforts... no memorization... no word associations... no key words... no will power... no positive thinking tricks. In fact, no super-human efforts on your part!

Institute of Human Dynamics is a division of Business Development Associates.

INSTA-MEMORY is Result-oriented Memory. Insta-Memory will help you to master...

- Fool-proof Cure for Forgetting
- Secrets of Extrasensory Instant Automatic Recall
- Techniques of Automatic Mind Search and Memory Scanning
- Art of Controlled Intuition and Mind Storming
- Ways of Strengthening Powers of Observation
- Craft of Instant Speed Reading
- Winning 'Exam Secrets'
- Public Speaking without Nervousness
- Dynamic Personality and Confidence Building
- Secrets of Extrasensory Perception

Plus, a whole wide range of tips on how to gain greater success, prestige, popularity and recognition.

INSTA-MEMORY—a U.S. Best Seller at Rs. 120/-... now yours for less than $\frac{1}{2}$ the original price! Thanks to our exclusive association with the New York Institute of Personality Development, we are now able to offer you INSTA-MEMORY at $\frac{1}{2}$ the original U. S. price (\$15). It will cost you no more than the price of a medium-priced briefcase: only Rs. 54/- (plus Rs. 6/- for postage, packing, handling). And you've our 7-day Full Satisfaction Guarantee—you pay nothing if not absolutely delighted!

Amazing Testimony about Insta-Memory—straight from U.S.A.

"I have had tremendous improvement in my job—my superiors are astounded with my super memory."—Mr. H. D. (New York.)

"After going through your course I am a very different person"—Miss P.K. (Bombay)

"Insta-Memory has helped me to gain a new type of self-confidence".
—Mr. S.P. (Poone)

K-69, COCHIN 682 026.

IAS Success in I.A.S. is no more Elusive

What is it that discriminates the chosen few from the
average lot in the Civil Service Examination? It is not
exactly the variable level of mental faculties or
variant effort on ones part. The main drawback lies
in the fact that one fails to strike an optimum coor-
dination between ones inherent faculties and
constructive effort, & we at Delhi's I.A.S. Study
Circle just do that: activating your latent faculties &
channelising into a scientific study scheme. Classes
tutored by scholars known for their impeccable
reputation in their respective disciplines : Profes-
sionals who virtually hand you over success. Drop in
and let our past convince you.

Our Results—In 1977-81.3%, In 78-83%, In 79-87.5%,
In 80-86.6%, In 81-86.9%, In 82-84.8%, In 83-85.7%,
In 84-83% and In 85-83.9%.

For details send Rs. 6/- by Money Order or
Postal Order to the Director,

as on 1.7.1985.

You can also be one of them.

Banking: A Rewarding Career:

Nearly 2500 Probationary Officers are recruited every year by Banks in India. This avenue of direct recruitment as Probationary Officers in Banks offers a promising career for bright young people today. Any graduate between 21 and 28 years can apply for the post. The job brings a handsome remuneration, security of service and job satisfaction. The work content is rich and varied. And, after nationalisation, Bank jobs have acquired a new status, because now the Banks have taken upon themselves the responsibility of building a better India. Today, in our Banks, our social ideals find a dynamic expression. Bank jobs, therefore, offer the opportunity and challenge to participate in shaping our country's future.

Our Professional Commitment

We coach in regular Courses at Bombay, Pune and by POSTAL TUITION throughout India for objective and descriptive test of PO exams. All subjects—(1) Reasoning (verbal, logical, non-verbal) (2) Quantitative Aptitude (3) General Awareness and Current Affairs (4) English Comprehension (5) Essays, letters, precis writing—are covered exhaustively. Specialised practice books on all subjects covering thousands of typical and actual exam questions are supplied in the Course. These books are not sold to others.

Success Earned is Success Deserved:

We are just a few years old but our successes have been noted across the country. Help and recognition have come from everywhere and in abundance. Test after test, hundreds of our students join the 20 Nationalised Banks, State Bank, Associate Banks, LIC, GIC, ECGC as Officers. The subjects, syllabus, pattern of tests and examining body (NIBM) for all these exams are same. Naturally we have a single common BRPO course for all these exams. Success oriented students join the Course well in advance of the test and benefit by our step-by-step and exhaustive coaching. Admissions are open round the year but the number of admissions is limited to the number of vacancies declared by Banks.

Selection on Merit through Competitive Exams:

When vacancies of Probationary Officers are declared at intervals of almost every three months by one Bank or another, large numbers apply for them and appear for the intensely competitive exams based on general intelligence tests. Standards of evaluation are most rigorous and impartial. The percentage of success is lower than 0.5%. Therefore, every single additional mark that you can get becomes important. A provenly competent, specialised and thorough coaching becomes a MUST.

NSB's Faith in Specialisation:

National School of Banking, head-quartered at Bombay, was founded years ago as a specialised institute providing coaching mainly for BANK RECRUITMENT exams—of POs and Clerks. It has grown rapidly and is now the largest pre-recruitment training institute in the country. Our continuous research and on-going study of objective and descriptive exam question papers have contributed to our present pre-eminence as the central institute for BANK RECRUITMENT training.

JOIN NOW AND PREPARE FOR A RICH AND REWARDING CAREER. For details of vacancies, application forms and our special courses, please contact personally or write today with Rs. 2/- P.O./M.O. to:-

LETTERS

Weapon Of Exploitation

Religion is indeed a most effective weapon to exploit humanity

Avnish Pethek, Delhi

Best Letter: Rs 40

Boomerang!

Does Reagan realise that his Star Wars programme will ultimately devour the stars on his own flag?

Neeraj Sharma, Delhi

Prize-winning Letter: Rs 25

Integrity Indeed!

Talk about national integrity! When walls of separation and alienation are being shored up with obnoxiously coined words like 'quotas' and 'reservations'

Kalyan Mukherjee, Calcutta

The Right Cause

The time has now come for man to fight with all his might for love and peace.

Rajinder Kapoor, Kernal

It is bad that not all wish for peace, it is worse that most do not work for it. It is worst that some of them are opposed to it. It is a pity that there are many who do none of these

Predip Sementerey, Bhubaneswar

The Devil Within

Disarmament is hardly the perfect solution and there are no treaties, man will still fight with sticks and stones and his nails and teeth, as long as his warring instinct remains

Sevite Murti, Cochin

Meaning Of Tourism

Promotion of tourism does not mean building five-star hotels, but providing opportunities to all sections of people to know more about their country and its cultural heritage. At present for the government, tourism definitely means only foreign exchange

V. Vijaya Krishnan, Hyderabad

Who Is Guilty?

In *Hello Folks* (Oct '85) you talk of misguided persons. Who are they? Are they the Sikhs or the misguided politicians who instead of settling the Punjab issue went on creating problems by promoting Bhindranwale, etc., which we all know?

K. S. Sethu Medheven, Madras

A Great Help

The article *How To Tackle CAT-1* (Sep '85) by Edgar Thorpe was very useful and especially, the portion on English and Quantitative Aptitude was well-written. I would like to see more of such articles, which make your magazine different from others.

Trilok Raj Sharma, Ferozepur City

For the past few months, I have been reading your magazine regularly. Since I am preparing for the CAT (Common Admission Test), I found the exclusive article on CAT (Sep '85) very useful. I am pleased to learn that more articles devoted to CAT will be appearing in your forthcoming issues.

Surinder Kumar Maheja, Panjkula (Haryana)

Priorities

Here are two very special news items: (i) Rajasthan is in the grip of the worst famine of this century. (ii) Rs 40-45 crores are being spent on the Congress Centenary Celebration Exhibition in Jaipur.

Ravindra Misra, Jaipur

World War III In The Making

Looking at the goings-on between the superpowers, I feel the next world war will be fought over the issue of disarmament.

Anil Sharma, Patna

Should Be But Never Is

All India Radio broadcasts in a regional news bulletin: "The state's forest department has implanted 2,50,500 seedlings during this week to celebrate 'Vano-Mahotsav'. But the news that never comes after a month: "Out of 2,50,500 seedlings implanted to celebrate Vano-Mahotsav, 2,50,000 died due to want of care."

P. K. Sahoo, Dist. Dhenkanal (Orissa)

Parties Galore

In our country, there are more 'national' parties than 'national' men. The political parties easily outnumber the politicians truly committed to the country's progress. This is hardly surprising considering everybody wants to reach the top and assume power

Yogesh Kalra, New Delhi

Worth A Thought

On the occasion of the Akali Dal's victory in the Punjab elections, PM Rajiv Gandhi said that it is the victory of unity and integrity. I wonder what he would have said had the Congress (I) won.

Krishna Chandra Singh, Cuttack

Waste Of Precious Talent

It was distressing to know that many of the IIM toppers (*How To Manage Management*, Oct '85) have chosen to join multinationals like Bank of America, American Express and Citibank rather than

serve their own country. Swami Vivekananda's words come to my mind, "Him I call a traitor who having been educated at the expense of the poor man pays not the least heed to him."

V. Jayendran Manon, Bangalore

Akalis And Terrorism

CM S.S. Barnala said, "The Akali Government's policy towards the terrorists in Punjab would be one of love." The question is whether the policy would shatter or shelter terrorism.

Rajash Kumar, Delhi

Make The Makers

Our education system makes it amply clear that adequate provision must be made to educate the makers of the education system itself.

Kumar Rajiv, Patna

Die A Thousand Deaths

Cowards die many times before their deaths. Nay, VIPs in a democratic country die many times before their deaths.

Sanjay Kr Sahay, Jamshedpur

Victim Of Progress?

I have a sinking feeling that India is soon going to be a pathetic victim of computerisation.

Rajiv Mehrotra, Lucknow

Impossible Situation

India is trying her best to be a superpower. Perhaps that is why she is unable to prevent many of her people from going below the poverty line every year. Excusable indeed.

Subhandu Kumar Mishra, Bhubaneswar

Irrelevant

This is with reference to *Preparing For An Interview-2* (Sep '85). The board members of any interview board have to judge the knowledge and the overall personality of the interviewee within an average time of 15 minutes. If the interviewer asks the candidate what the 'S' in his name S. Gopal stands for, his answer should have been precise and to the point, that is, 'S' stands for Sutamanyaveer. The answer to the second question regarding the origin of his name should have been Gopal is one of the several names of Lord Krishna. Lord Krishna is one of the several (10) incarnations of Vishnu, the preserver of the vast universe, according to Hindu mythology. The rest of it was irrelevant to the question.

M. Mohan Rao, Delhi

Mistaken Identity

In *Word Play 1* (Sep '85) out of the 22 authors mentioned four are French and two Irish. The French authors are: Zola, Emile (1840-1902); 2. Hugo, Victor (1802-1885); 3. Verne, Jules (1828-1905); and 4. Dumas, Alexandre (1803-1870). The Irish authors are: 1. Swift, Jonathan (1667-1745) and 2. Shaw, George Bernard (1856-1950). The name of the book supposedly by an American and English author was *Pygmalion* by G.B. Shaw (Irish).

Assem Seksena, New Delhi

WIN A PRIZE

Do our articles provoke you to say something? Is there anything else you feel strongly about? Here's your chance to say it and make some money in the bargain. The best letter will win Rs 40, the second Rs 25.

So, why don't you get cracking? Your letters should be legibly written/typed, not exceed 200 words and include your full name and address. We may edit them for purposes of clarity or space.

Hello folks..

As we were moving out of the marriage pandal, thanking the hosts for the lovely food and beautiful coffee, a gentleman butted in, "The coffee was good, Mrs Batra." The lady smiled, "I hope the food was also good, Mr Sharma." "Yes, yes, of course," said Mr Sharma and walked away, not realising the full implication of what Mrs Batra had said.

Not many people talk realising what they are saying or remembering that every word has an effect. In this particular case, what Mr Sharma conveyed to Mrs Batra was that only the coffee was good. In fact, he wanted to say that the food including the coffee was good. If he had said, "Coffee was also good," he would have effectively conveyed his feeling to Mrs Batra.

Language, in reality, is the vehicle to communicate with each other. You have to use different kinds of words with different people to communicate the same idea. Suppose your friend has been given an extension of service. You can safely say to him: "I am happy that you have got an extension of two years." But you cannot say the same words to your boss because if you do he may feel offended. An appropriate expression would be: "Sir, I have heard that you have been persuaded to work for two more years. We are happy."

Churchill, it is said, attached great importance to correct usage of words. M.O. Mathai has narrated a few instances of Churchill's in his book *Reminiscences Of The Nehru Age*.

Once, at a dinner table, Churchill told his wife, "You ought not to say very delicious; 'Delicious' alone expresses everything you wish to say. You would not say 'very unique'." In this connection, Lord Moran (the famous physician) says that Churchill once thought of including the following in

a speech at a university: "A man called Thompson went to a surgeon and asked him to castrate him. The surgeon demurred. But when the man persisted and argued, he eventually agreed and took him into the hospital. The morning after the operation, Thompson woke up in great discomfort. He noticed that the man in the next bed was in pain and was groaning. He leaned towards him over the side of the bed. "What did they do to you?" he asked. The man replied, "I have been circumcised." "Good Lord" Thompson exclaimed. "That is the word I couldn't remember when the surgeon asked me what I wanted done."

One evening Churchill was sitting on his bed and shouting for his hotwater bottle. The valet appeared. Churchill asked him where the hotwater bottle was. The valet replied, "You are sitting on it Sir, not a good idea." Churchill smiled and replied, "It is not an idea but a coincidence."

Words change their meaning in different times and societies. If one is not careful, one can suffer a great deal of embarrassment. About ten years back, when I was on my first visit to the United States an American friend invited me for dinner. I asked him: "When should I reach?" He said: "Come any time, earlier the better as we would have more time to chat." He had also invited a few Indians and Americans to meet me.

I reached at 7 p.m. and found no one there. The host welcomed me and offered a drink. I was a little confused as there was no sign of a party. I thought maybe I was early and people would come around eight. But there was no sign of other people joining in. Then I asked: "What has happened to the others. You said that you have invited a few more?"

"Oh, they all came in the noon. We had a good gathering, and great fun. Since there was no way to get in touch with you, we thought you had forgotten, as many Indians do."

My pride was hurt and in an annoyed tone I retorted: "You wanted me for dinner, didn't you?"

"Dinner on Sunday means the noon meal. On other days also we invite for supper. Dinner is very formal and is only on special occasions."

I learnt a lesson.

The Chinese have become crazy about learning English as the language is considered a sure road to success. This was revealed by the members of the

Chinese Journalists Association currently in India. Apparently, the Chinese have realised that knowledge of an international language like English is very necessary for getting better jobs in foreign countries and promoting business in the international market. Though the Chinese have the option to learn other languages like Japanese, Russian, French and Spanish, the majority prefer English. The learning of English has gained prestige among intellectuals and those who do not know the language feel envious of those who know it. Subsequently, the prestige of English teachers has soared. Keeping in view the importance of the language, the Chinese government has made teaching of English compulsory from the eighth standard onwards.

Since the Chinese are far behind as far as the knowledge of English is concerned, they have devised imaginative ways of teaching the language. Many magazines have come up to help the Chinese to learn English clearly and systematically.

The way the English language is gaining importance in China, the authorities are afraid that it may replace the Chinese language itself. Therefore, great care is being taken to protect it. The Chinese are not encouraged to have day-to-day conversation in English and it is considered preposterous to speak English wherever it is not desired.

We, on the other hand, are discouraging the learning of English. Though we have a well-developed infrastructure to teach English and a strong desire on the part of an average Indian to learn it, the teaching of English has become sub-standard due to the myopic vision of politicians.

We need a pragmatic approach towards the English language. There is no doubt that it is an international language and knowledge of it is a definite advantage. Why then should it not be taught scientifically and widely in India? We have a large number of English teachers; the only problem is that English is not taught at the right stage and in the right way.

Since young boys and girls in schools and colleges are the ones who are most directly affected by the knowledge of English or the lack of it, a demand should come from them for the effective teaching of English.

L. Mathai

TEST YOUR WORD POWER

The per-fect WORD. Is it on the tip of your tongue, or is it hidden in the back of your mind? Either way, we agree, it's an eloquent problem.

And so each month we bring you this column, tailor-made to suit your requirements. Twenty new words complete with their meanings and usage.

But what's so unique about our word power exercise? The 20 sentences are information-packed and fact-laden—facts which are often not easily available. A weighty two-in-one package, wouldn't you agree?

Tick the word or phrase you believe is *nearest in meaning* to the key word:

1. **abstain:** A: to hold away from B: weaken C: win the favour of D: substitute one thing for another.
2. **ale:** A: pure colourless drink B: light-coloured beer C: tree (of the birch family) D: passage.
3. **blitz:** A: heavy snowfall B: bright flame C: a swift, sudden attack D: dishonest trick
4. **boisterous:** A: heavy B: noisy C: healthy-looking D: frivolous
5. **cavity:** A: underground room B: large, open pot C: hollow D: underground passage
6. **chaos:** A: destruction B: decay C: total disorder D: deception
7. **counterfeit:** A: an exact copy B: sudden attack C: violent retort D: forged
8. **deport:** A: to expel B: overthrow C: cause to wither D: subdue
9. **elude:** A: to dodge B: remove C: draw out D: make clear
10. **ferment:** A: to undergo chemical changes B: pretend C: boil D: recede
11. **galvanise:** A: to shock or rouse B: push C: hasten D: sparkle
12. **mausoleum:** A: a floor covering B: a place of pilgrimage C: a stately tomb D: a museum
13. **opulence:** A: musical composition B: greed C: wealth D: energy
14. **precarious:** A: unimportant B: uncertain C: dull D: steep
15. **revile:** A: to attack with contemptuous language B: bring back to consciousness C: cancel D: refuse to accept
16. **soporific:** A: amiable B: deceptive C: dreamy D: causing sleep
17. **squabble:** A: poverty B: petty quarrel C: shrill cry D: small tree-climbing animal
18. **subside:** A: to go down slowly B: become strong C: give in D: reduce in stature
19. **troupe:** A: a group of soldiers B: freshwater fish C: agreement to stop fighting for a time D: company of performers
20. **tycoon:** A: violent storm B: playboy C: heavy instrument D: powerful businessman

(Answers on page 70)

THOUGHTS

BY M

Here's some food for thought... provided you pause to ponder over it. These passing thoughts on various social, political and economic issues, expressed by a few observant minds, often portray the bare realities of life. They may even set your thought processes in motion!

Medalists are important, but the true achievement is that of the person who comes out the winner. It is P. T. Usha, after all who gets the gold medal, not her coach!

Abu Abraham in *The Hindustan Times*

The world economy today is faced with increasing protectionism, falling commodity prices, and a severe debt crisis, made worse by high interest rates.

N.C. Menon in *The Hindustan Times*

Sir Robert Peel, against heavy odds, succeeded in getting parliamentary approval for a regular Police in 1829. Since then the British policeman is called a "bobby"—an affectionate diminutive for "Robert".

N.S. Saksena in *The Times Of India*

Throughout their history the British have been reluctant to give more than the barest minimum powers to their police. Indeed, Britain had just

no police force till 1829. The public opinion feels that the police would become an instrument in the hands of the executive to suppress freedom.

N. S. Saksena in *The Times Of India*

The way to solve regional problems is through dialogue and negotiation and not invasion and occupation.

Ronald Reagan to *TOI* correspondent

By digging a hole for South Africa (SA) they (Commonwealth countries and the US) could end up burying themselves. If SA were to hold up their chrome exports, one million Americans would lose their jobs and promoter industries in Europe would be brought to a standstill.

SA President Pieter Botha's reaction to Bahama Proposal, *The Times Of India*

The upsurge of black anger within the country (South Africa) seems to be approaching the point of no return. The writing is writ large on the wall: an orderly and peaceful change or a bloody end to the most inhuman dispensation in the world. The choice is Pretoria's.

Indian Express

Plato, the fountainhead of Western political theory, declared over 2,500 years ago that tyrants are by nature criminals.

The Economist

Riots are more frightening than wars. You know, in a war, exactly whose target you are. In riots the bystander... is likely to be an indiscriminate target for both sides.

Dom Moraes in *Debonair*

The only real freedom is in order, an acceptance of boundaries.

Peter Ustinov

I do not know of any society of people, animals or insects that has existed for long without an elite. Russia and India, as well as countries in the West, have their special academies designed to produce excellence.

Civilisations have often been founded on classical languages, and to learn to think in a foreign tongue is no bad training for the mind.

J. T. M. Gibson in *Indian Express*.

QUOTABLE QUOTES

The object of government in peace and in war is not the glory of rulers or races, but the happiness of the common man.

William, Lord Beveridge

A rich man's joke is always funny.

T.E. Brown

If we command our wealth, we shall be rich and free; if our wealth commands us, we are poor indeed.

Edmund Burke

The best reason why Monarchy is a strong government is that it is an intelligible government. The mass of mankind understand it, and they hardly anywhere in the world understand any other.

Walter Begehot

Everything is only for a day, both that which remembers and that which is remembered.

Marcus Aurelius Antoninus

Rome has spoken; the case is

concluded.

St Augustine

A man that studieth revenge keeps his own wounds green.

Francis Bacon

If there is a hill upon earth, it is to be found in a melancholy man's heart.

Robert Burton

An apology for the Devil—it must be remembered that we have only heard one side of the case. God has written all the books.

Samuel Butler

There is no finer investment for any community than putting milk into babies.

Winston Churchill

Men will confess to treason, murder, arson, false teeth, or a wig. How many of them will own up to a lack of humour?

Frank Colby

RURAL INDIA A PROGRESS REPORT

BY ANITA NARAYAN & SRIDHAR RAMAN

Rural India—thirty years of modest development have changed its outlook. And though the change has not been dramatic, it has been in its own quiet way significant and creditable. Deep pockets of poverty are still very much a familiar part of the scenario. Needless to say, the challenges ahead are daunting; but the mechanical capability and expertise that India has acquired in the last two decades should enable her to combat them with confidence. In these pages, we present an analysis of rural India's development in the social, economic, cultural and political spheres.

Agriculture is the mainstay of India's economy. It provides livelihood to 70% of India's population and constitutes 40% of the national income. In addition, inputs for 70% of the nation's exports come from this sector. Nearly 60% of India's teeming workforce is engaged in agriculture and allied occupations, viz. animal husbandry, poultry farming and forestry. Agriculture also supplies raw materials to leading Indian industries such as cotton and jute textiles, soap, sugar, food products and tea. Together, these agro-based industries account for 50% of the total income generated by the manufacturing sector.

India's record in the agricultural sector does not quite measure up to the high standards set by some of the world's top-notch performers in the field. Yet its achievements in the last three decades are phenomenal, considering the ruins in which the British left our rural economy (see Table A). Production of foodgrains has rocketed by 194%, oilseeds by over 50%, sugarcane by a staggering 207%, cotton by 117% and jute by more than 200%.

The most conspicuous gain of these years has been the conquest of famine. The post-independence annual growth rate of 2.7% and the fact that this rate has been consistently higher than the population growth rate of 2.1% explain India's steady march towards self-sufficiency in food. What propelled us towards self-sufficiency was partly the strategy of planned development adopted by India. In every five-year Plan, the Planning Commission fixed specific targets for each crop. It also charted out the programmes necessary for rapid agricultural growth, viz. irrigation, soil conservation, dry farming and land reclamation, supply of fertilisers, better ploughs and improved agricultural implements and propagation of scientific methods of cultivation. The government expressed its eagerness to ring institutional changes by setting up a wide network of community and agricultural development services. The use of land reforms, expansion of transportation, power, marketing and other key facilities like cooperative credit gave a powerful impetus to the agricultural sector and catalysed its growth. Since the Third Plan, growing emphasis has been laid on acquainting farmers with the latest developments in scientific research through concerted programmes like Intensive Agricultural District and High Yielding Varieties (HYV) programme.

The cumulative impact of all these steps swept India through phases of vigorous agricultural growth, the green revolution being the most notable of them (see Table B). The effect of the green revolution can be best seen in the fact that while between 1960-61 and

1980-81 the total area under cultivation rose by only 7%, production shot up by 40% and yield per hectare by 27%.

These achievements were also made possible by the government's efforts to develop a scientific temper among the villagers and in Indian agriculture as a whole. The figures speak: irrigated area 60m hectares in 1982-83 up from 2.6m hectares in 1950-51; consumption of fertilizers 64.2 lakh tonnes in 1982-83 taking off from 22.6 lakh tonnes in as late as 1970-71. An epoch-making technological breakthrough in spreading the cover of HYV resulted in the growth of area under HYV to 46.5m hectares by 1981-82.

While the achievements of the past are something to be proud of, the challenges of the future are overwhelming. For, as P.C. Joshi notes, "India was able to achieve an incremental output of 100m tonnes from 50m tonnes in 1950-51 to 150m tonnes in 1984-85, all in a period of 35 years. The country has now to increase its output by 70m tonnes over a period of only 15 years." For India's population is expected to grow at the rate of around 2.8% over the next 15 years or so. Indian agriculture, therefore, like Alice in Wonderland will have to keep running just to stay in the same place.

Land Reforms

At the time of independence India being a predominantly agrarian society, the rural sector received much attention from planners and politicians alike. The fact was highlighted that Indian society and economy being overwhelmingly rural was deeply related with the pattern of land organisation. Land not only constituted the major source of livelihood for the people, but also determined the system of social stratification, power structure, village and family organisation.

The landownership patterns prevalent at independence were those inherited from British rule and can be distinguished into three types:

Zamindari system: Revenue was collected by the Zamindar who acquired the status of a landlord. This system was greatly exploitative and asymmetrical in nature with the landlord controlling vast holdings at one end, and an ever increasing number of landless agricultural labourers at the other. In between, in varying degrees of sub-infeudation (hierarchy), were numerous intermediaries—tenants, poor peasants, sharecroppers, etc. The zamindari system was extensively found in Bengal, Bihar, North Madras and Varanasi.

Ryotwari system: Occupiers of small independent holdings paid revenue directly to the state. This system was largely found in Central India, Bombay and Berar.

Mahalwari System: Land was held in control by village communities who together were held responsible for the collection of revenue. This type of land ownership pattern was introduced in Agra, Avadh and Punjab.

Hence the land-ownership patterns at the time of independence presented a very dismal picture characterised by gross socio-economic inequalities and strong feudal elements. In 1951, 78% of the landholdings were below 10 acres, whereas 5.6% of the total holdings were above 25 acres.

It is due to the existence of this depressing state of affairs that the Planning Commission in 1952 gave concrete expression to the commitment to land reforms. It specified that the primary aims of the land reform programme were redistribution of land among the landless, establishment of individual holdings, security of tenure and bringing the cultivated land in to direct contact with the State. The general scheme of the programme consisted of the following features: (a) abolition of intermediaries; (b) tenancy reforms; (c) land ceilings; (d) agrarian reorganisation; (e) organisation of cooperative farms.

The first phase of land reforms which was characterised by the implementation of the Zamindari Abolition Acts, 1951, emphasising the complete abolition of zamindari and large landholdings, can be said to be the only aspect of the programme to have achieved a certain measure of success, in the sense that it curtailed the zamindar's power to make arbitrary demands for services including *begar* (forced labour).

Many tenants were able to acquire secure land tenure, no longer being burdened by exorbitant rent demands. However, this by no means implies that the zamindars were the losers all the way. Due to the flexible terms of the Act, whereby the zamindars' *khudkash* land (personal cultivation) could be retained, it became possible for them to usurp land under the guise of 'personal cultivation', and so eviction of tenants took place on a large scale, with many becoming landless agricultural labourers. Further, due to inadequate or faulty land records, as in UP and Bihar, more land was seized under the same pretext. The percentage of absentee landlords (those residing in cities and having their holdings supervised by intermediaries) remained almost the same, many being political representatives of rural areas.

Tenancy reforms which aimed at the security of tenure, regulation of rent and conversion of tenants into owners also could not achieve their objectives. In many instances, even the land reform policies were not implemented by the states, as land reform, being a state subject,

was left to the independent discretion of the individual states. The tenants being poor and illiterate were also not aware of their rights and besides, due to their insecure position, were often subjected to large-scale evictions.

Land ceiling whose aim was the redistribution of excess land (taken from the landlord) among the landless also had as one of its principal objectives the conversion of tenants to owner-farmers. However, when the laws were enacted, they were once again riddled with loopholes and so failed to achieve their objectives. In the case of the Bihar Land Reforms Act 1961, though provisions were made for the landlord to retain *khudkash* land, in the same clause another statement read that if any land owner had not transferred excess land to heirs, he should do so within six months of the law's implementation. Land growing cash crops were also exempted from the ceiling law whereby an enterprising landowner in Madras converted his 20,000 acres of land under rice to sugarcane plantation. Hence, with all the loopholes, illegal transfers and paper partitions, the ceiling laws defeated the very purpose for which they were instituted. Gandhian movements like Bhoomdan, Gramdan and Sampattidan which tried to achieve the same ends, after gaining some initial momentum failed to achieve their objectives.

The venture of cooperative joint farming which was floated to increase efficiency, provide more opportunities for the landless and finally result in a food surplus also, despite all good intentions, failed. In many instances, funds were allocated to non-existent cooperative joint farming societies, which led to the scrapping of the entire scheme. Countries where land reform programmes have been enforced strictly such as Japan and South Korea, have met with a tremendous measure of success.

In the Indian context, the land reform programme has been hardly satisfactory. Noted scholars such as P.C. Joshi have attributed this failure to the inconsistency between the ideology behind the programme and the legislation embodying it. Whereas the ideology of the programme was radical in nature being strongly anti-landlord and committed to the interests of the rural poor, the legislation was not correspondingly strong and primarily represented the interests of the intermediate classes such as the rich peasants. In the case of India, it is seen that land concentration was not radically changed but merely modified. Further, protection was not given to all types of tenants but only to those belonging to the upper strata of the tenancy. Besides the implementation and follow-up of the programme was delegated to the normal administrative channels of the government which had no time-bound programme and commitment. Barring some areas in UP where security of tenure was granted to some category of tenants, the tenancy reforms have been deemed a total failure.

On the whole, however, India's experiment with land reforms cannot be dubbed a total fiasco. The practice of *begar* (forced labour), debt slavery and illegal exactions are not as rampant as before. The Zamindari system has been terminated in almost all areas. Jammu & Kashmir, Kerala, West Bengal and UP are some of the states which achieved a certain measure of success in this programme.

**Harvesting a change.
Agrarian Structure**

As the Britishers had introduced three different types of revenue settlement patterns (Zamindari, Ryotwari and Mahalswari) in the country, the emerging agrarian relations also varied. The agrarian relations in West Bengal, characterised by the Zamindari system, was very different from that in Maharashtra under the Ryotwari system. After independence, different parts of the country developed different modes of production and again differing agrarian relations emerged.

Due to prevailing socio-economic conditions and the government's agricultural policy, economic development in rural India has been characterised by regional imbalances. Broadly speaking, in terms of economic development, India can be divided into five regions. First there is the semi-feudal eastern peripheral group consisting of Assam, Manipur and Orissa. Himachal Pradesh is included in this group. Second, the backward semi-capitalist group which includes UP, Rajasthan, MP and Jammu & Kashmir. Third, West Bengal and Bihar constitute the mixed semi-feudal and semi-capitalist group with some areas such as Burdwan and Purnea district being greatly developed, and others remaining grossly underdeveloped. Fourth, the developed capitalist north-west consists of Punjab and Haryana. Last, Maharashtra, Gujarat, Karnataka, Andhra Pradesh, Tamil Nadu and Kerala form the capitalist southern and western states, though in some districts of the eastern states, strong feudal elements in the agrarian structure still persist.

According to the amount of actual labour and the share in the product, the Marxist scholar, Daniel Thorner, has identified three principal classes in the Indian agrarian social structure—Malik, Kisan and Mazdoor. Being a

general outline, it does not present a comprehensive classification of the agrarian situation prevailing in the country where not only class considerations but even those of caste contribute to the diversity. Thus in Karnataka the Okkaliga caste, in Andhra Pradesh, Kammas and Reddis while in Haryana, the Jats and Yadavs own the maximum landholdings and, in terms of wealth and power, are the dominant castes. Yet many of these castes in other parts of the country are small peasants.

Similarly, before independence the nature of agrarian relations also varied from region to region. Thus in Punjab, where the nature of agrarian relations vary greatly from that in Bihar, a huge number of migrant labourers from Bihar and eastern UP are employed in field work, and though by Punjab's standards they are underpaid, yet they are paid much more than what they would receive in Bihar. Therefore, there exists in Punjab the rich farmer, the middle farmer and the migrant Bihar agricultural labourer. However, this exact classification cannot be applied to Bihar where a number of intermediaries still exist in different degrees of sub-feudation between the landlord and the landless labourer and the problem of *begar* (forced labour) still remains. Further, whereas the rich farmer in Punjab works on the land with his own hands, this is not so in Bihar where non-involvement in agricultural work is symbolic of high status.

A significant development after independence has been the emergence of middle level castes such as the Ahirs, Jats, Kammas or Okkaligas who have greatly profited from the land ceiling policies. Newly acquired wealth has added to their landholdings which they have purchased from the higher castes. Absentee landlordism, earlier widely rampant throughout the country, has almost disappeared barring few exceptions like "gentleman farmers".

However, the post-independence period has not seen any improvement in the condition of the landless agricultural labourers, sharecroppers and small peasants. With the breakdown in the earlier paternalistic system of relations (where despite the tremendous exploitation of the traditional landlord, the rural poor did receive some security due to the landlord's patronage) even the little security enjoyed by the rural poor has been taken away, and the new agrarian relations have substituted it with nothing. The attitude of the aggressive middle castes towards these poor sections is one of callousness characterised by extreme exploitation and oppression.

Poverty Alleviation

While the per-hectare food production (yield) has steadily increased since independence and particularly in the wake of the green revolution (See Table A), the yields of all major cereals and cash crops, viz rice, wheat and cotton remain less than 30% of those obtained in the developed countries (See Table C). They are also well below the average world levels.

The per worker output is also low by global standards. The average productivity per worker for 1969-70 was only Rs 1,213 ranging between Rs 3,195 in Punjab and Rs 1,230 in UP. Significantly, even though land productivity is highest in Kerala, an average Punjab farmer earns more than his Kerala counterpart. This is because there are more men to a hectare in

Kerala than in Punjab. This shows that the biggest single influence on the economic condition of the rural people is the size of the agricultural population.

In India, a very large number of people live on agriculture. By 1971 the agricultural population had bloated to 383m from 1.63m in 1901. The tremendous pressure of population caused fragmentation of land. So intense was the pressure on land that despite a steep increase in the total area under cultivation since the turn of this century the area of cultivated land per cultivator (land per capita) fell sharply from 0.43 hectares in 1901 to 0.23 hectares in 1981.

The two related factors have inexorably driven the rural economy to the brink. The desperate scramble for land and the inability of industry to provide alternative employment are relentlessly pushing farmers into the swelling ranks of landless labourers. The last count put their number at 384m, and it is growing. These farmers have lost their incomes and the assets with which they could earn their incomes. They are among the most wretched and abject of the rural poor. It is these farmers who will have to be rehabilitated if at all rural India is to develop. This realisation prompted the government to launch the poverty alleviation programmes.

Following the failure of the Mahalanobis model to confront Indian realities, Indian planners shifted their emphasis from hacking sheer growth to encouraging direct attacks on poverty through poverty alleviation programmes. These programmes followed two approaches: one, the area approach and two, the target approach. To the former belonged the Drought Prone Area Programme and to the latter programmes like the Small Farmers Development Agency (SFDA), Employment Guarantee Scheme, Food for Work Programme and Training Rural Youth for Self Employment (TRYSEM). In the Sixth Plan, the two approaches were combined into the Integrated Rural Development Programme (IRDP).

When it was launched in 1978, the IRDP was hailed as India's most comprehensive attempt at *garibi hatao*. In the last seven years, most of the hopes raised by the programme have been belied. Some of its keenest supporters have become its staunchest critics.

In 1978-79 the IRDP covered only 100 blocks. Later it was extended to 2300 blocks and finally on Oct 2, 1980 all the country's 5,011 blocks came under it. The Sixth Plan provided Rs 4,500 crores—Rs 3,000 crores in soft bank credits and Rs 1,500 crores in subsidies—in the task of raising 15m people permanently above the poverty line. Obviously, in quality for IRDP aid, a family had to be under the poverty line, that is, have an annual income of less than Rs 3,500.

The implementation arm of the programme, the District Rural Development Agency, was assigned the crucial task of providing assets to landless labourers through the medium of subsidised assistance so that their earnings—by operating the assets—could forever transcend the poverty line. The objectives were laudable, but the same, unfortunately, cannot be said about the methods employed to implement them. No wonder, the IRDP managed to uplift no more than 8% of the 15m it was targeted at, and with more than twice this

number joining the ranks of the poorest of poor every year there is, if anything, more poverty now than there was in 1978. All reports cite corruption, centralisation, mismanagement and maladministration as the principal causes for the programme's ineffectiveness.

For a programme whose entire focus was to uplift the poorest of the poor, many of the beneficiaries were surprisingly well-heeled. Noted rural poverty analyst, Dr Nilkanth Rath says, "Except in Rajasthan and West Bengal beneficiaries were picked at random or under the duress of political pressure." The Public Evaluation Organisation (PEO) says that almost 3/4 of all houses chosen under IRDP were selected by petty officials and only 26% by gram panchayats. Not surprisingly this led to gross violation of the income limits. For instance, 1/4 of the lucky ones had an annual income of over Rs 3,500. With another 30% in the not-so-poor income bracket of Rs 2,500-3,500 walking away with a big slice of the cake, the poorest of the poor got only 1/6 of the bounty. Even the PEO report admits that at least 26% of the persons assisted were too well off to qualify. Significantly only 28% of the beneficiaries repaid the loans. Juxtaposed, these two figures mean that only an alarmingly small number of the targeted families were able to repay the loans. A feeling further reinforced by the PEO finding that 50% to 60% of the beneficiaries defaulted.

Many of IRDP's chronic deficiencies are due to its centralised structure. Rules and stipulations framed at the Centre are very often insensitive to local needs and conditions. The

TABLE A
Production of Selected Crops since 1950-51

Items	1950-51	1983-84
1. Foodgrains (m. tonnes)	50.8	149.8
2. Oilseeds (m. tonnes)	5.1	12.5
3. Sugarcane (m. tonnes)	57	175
4. Cotton (m. bales)	3.0	6.5
5. Jute (m. bales)	3.3	7.4

allocation for all blocks, for instance, is the same though the extent of poverty and consequently the number of families below the poverty line (families with less than Rs 3,500 per year income) in no two blocks is alike. Resulting in a curious situation where one state has more money than it can use while another state is strapped for cash. Further, centrally determined goals and targets show little understanding of local limitations. Financial investment limits on different schemes fixed by the Centre are often impervious to the fact that the cost of implementing them fluctuates from state to state. Many a family has, therefore, ended up with money entirely insufficient for operating its enterprise profitably. Sets of programmes and projects are dealt out mechanically to beneficiaries without ever evaluating their background and managerial capabilities. The result is the same—a growing

legion of sick projects.

During the Sixth Plan period, IRDP's accent was on promoting cattle breeding by making cows available at heavily subsidised rates to the poorest. But in the absence of adequate backward and forward linkages such as cheap and easily available fodder, readily accessible veterinary services and milk marketing outlets, it became impossible for most of the families to operate the assets profitably. So the beneficiaries did the next best thing under the circumstances—they sold their cows. This represents a major failure of the programme.

TABLE B
Increase in land productivity in India (1961-82)

	(Kg/hectare)	
	1960-61	1982-83
Rice	1,013	1,230
Wheat	851	1,840
Maize	926	1,100
Groundnut	745	760
Sugarcane (gur)	4,613	5,620
Cotton	124	160
Potato	7,251	13,480

whose central mission was to raise the families permanently above the poverty line by turning them into self-reliant entrepreneurs. Many anti-poverty programmes like the IRDP have flopped also because of the indifferent attitudes of the workers at the grassroots level, entrusted with the key task of executing the plans.

The emancipation of landless labourers is a must for the economic renaissance of rural India. Poverty alleviation programmes like IRDP, therefore, are essential; there can be no question of scrapping them. What, however, is called for is an imaginative and realistic effort to rid the programme of its many shortcomings. The government has recently announced several steps to reform the programme like changing the approach of uniformity for funding projects to achieve physical and financial targets to selectivity based on incidence of poverty. If a state has a greater incidence of poverty, it will get bigger allocations and vice versa. The identification of beneficiaries will hence forth be ratified by village assemblies; package of assistance to ensure proper returns on investments is also being planned. This will provide the assisted families with the wherewithal to run their assets profitably. A new system of concurrent evaluation of current and two-year-old beneficiaries and a committee to review existing administrative arrangements for rural development are also to be introduced.

While these measures are in the right direction, certain other steps could be initiated to further strengthen implementation. It would, for instance, be rewarding to encourage voluntary agencies to participate in the implementation of such programmes. Voluntary agencies have often proved to be innovative, catalytic, capable of creating awareness, mobilising the underprivileged and motivating the downtrodden. Their more vigorous role in organising them for action is of crucial significance for building pressure from below. There is also a

case for reducing the allocations for IRDP during the Seventh Plan, and focussing resources on a fewer number of people. Says Swaminathan S. Aiyar, "Such an approach will have none of the excitement of the populist games that politicians play, but if it is adopted, poverty alleviation will be real, not just on paper."

Rural Politics

The politics of the rural hinterland significantly influences the distribution of power at the national level and also constitutes the base of the political structure in the country.

Formerly, before independence, political power was usually concentrated in the hands of the upper castes who were the locally dominant castes in their respective villages, i.e., the landowning caste which had the maximum economic clout. Significant examples are the Bhumias in Rajasthan, the Thakurs in UP, and the Brahmins in Tamil Nadu.

After independence, the base of the political structure changed substantially with the introduction of 'panchayat Raj' in the villages, whose aim was the granting of a certain measure of autonomy to the village community. Subsequently every village was represented by an elected administrative body called the 'Panchayat' which was headed by the 'Pradhan', subcommittees called 'Nyaya Panchayats', were also set up to look into legal issues.

In many regions, especially in south India, a perceptible shift in representation in these bodies was noticed from the upper castes down to the middle castes who had managed to acquire economic wealth.

In the north, however, political power remained, more or less, consolidated in the hands of the upper castes who managed to adapt to the changing situation although there are exceptions to this. The jats are a case of wealthy rural middle caste who have acquired political power in the north.

In south India, especially Tamil Nadu, the post-independence era heralded a remarkable change where after centuries of oppression, the lower castes expressed their deep resentment towards the higher castes through the anti-Brahmin movement which gained tremendous momentum due to the activities of the Dravida Munnetra Kazhagam (DMK) Party in Tamil Nadu. In the other southern states, such as Karnataka and Andhra Pradesh, the Okkaligas and the Kammas have emerged as powerful castes despite low positions in the caste hierarchy.

It is natural to wonder why in the post-independence era, this difference in the power structure between north and south India developed. One of the primary reasons is that the oppression of the lower castes in the south was more austere, and in many ways more humiliating than in the north. Thus lower caste members were forbidden to wear shoes or live in brick houses, and even their women were prohibited from wearing upper garments. Hence intense hatred of the upper castes especially Brahmins gave rise to the anti-Brahmin movement in the south. In the north, though oppression was widespread, the humiliating practices of the south were not so severely imposed and further political power was not concentrated in the hands of Brahmins alone but dispersed among other upper castes such as Thakurs and Rajputs.

With change in landownership patterns and

agrarian relations, agrarian conflict has also become a common feature in rural areas. The Naxalbari movement in north Bengal in the mid-sixties which aimed at forcibly changing the land ownership patterns and triggered off a wave of uprisings in Bihar, Andhra Pradesh, Tamil Nadu and MP is a case in point.

The interesting thing to note in agrarian conflict is that they not only articulate but, also reflect class loyalties, which is in certain ways a more important parameter for determining the nature of present conflicts.

Education

Since independence the number of schools has increased from 2.3 lakhs in 1951 to 6.9 lakhs in 1981—a 300% growth—while the number of children enrolled in class I has shot up from 2.83% crores to 11.4 crores—a 400% rise. Yet the literacy rate has crawled up by a mere 20%, from 16.1 to 36.17% (See Table C). This is partly explained by the explosive population boom from 383m to 684m in the last three decades. The other reason is the high "dropout" rate. Over 60% of all children who join schools drop out of them before entering class IV—considered the minimum for acquiring functional literacy. India's pathetic literacy record is particularly well manifested in the educationally backward states, viz. MP, Assam, Orissa, Andhra Pradesh, West Bengal, Bihar, UP, Jammu & Kashmir and Rajasthan. MP typifies the many malaises that afflict India's educational system—high dropout rates, low retention rates, woefully scarce resources, irrelevant and outdated curricula. The problems are the same throughout India, only the degree is different.

Nearly three-fourths of children in the age group 6-14 in MP grow up as illiterates, despite a three-fold increase in the number of

points vary from state to state, they are broadly the factors responsible for the muddle that is India's education.

Since economic and social planning began in 1951 India has been confronted by four major tasks concerning universal elementary education, viz provision of educational facilities within easy walking distance from the home of every child, enrolment of all children in the compulsory education age group of 6-14, retention of enrolled children and improvement of quality of education at the elementary level. Of all these, only the second objective of enrolling all children has been achieved to some extent and even this gain has been largely negated by the high dropout rate. As far as the other tasks are concerned they remain largely undone.

The geometric increase in the number of primary schools from 2,09,671 to 5,03,741 has brought one primary school within the walking distance of every child; however, in the absence of basic facilities most of these schools are serving no meaningful purpose. There is a dire need to revamp these schools and furnish them with at least the essential facilities. In India, education has for long received a low priority. The expenditure on education currently is about 3% of its GNP. The allocation on education must be raised to at least 6% of the GNP even if it means diverting resources from other development activities. For education is and has always been the continuum and the oasis for the development of human society.

In India large sums of money will have to be channelised into the stream of education both for erecting new facilities and equipping existing schools with proper amenities. For at least two reasons: one, the constitutional obligation to provide basic education to all citizens and two, the proven finding that investments in elementary education yield the highest rate of return and have a significant impact on productivity; the largest amount of money needs to be funneled into elementary education. And if in a country like India, with a massive illiterate population, it is not feasible to impart education through traditional modalities such as class room teaching and text book material, then we must plough greater funds and resources into developing non-formal methods of disseminating knowledge including television. For, if the rates of growth of literacy and population remain what they are, India will step into 2000 AD with 50 crore illiterates—5.1% of all illiterates in the world.

While no amount of money or resource spent on reforming education is too much, merely erecting schools and facilities is not enough. It is necessary to create in the rural areas socio-economic conditions in which there is a demand for them. In many ways schools represent an alien culture to poor families in rural areas and so they do not send their children to them. Rural communities engaged in farming, see no purpose in giving their children the type of education which will make them scorn working with the hands.

They are justified. Today countless young people leave schools, colleges and universities with an elitist veneer, they regard even the most gratifying of manual activity as inferior to the meanest and most routinised of clerical work.

This must change radically. The vocational content in education must be enriched,

TABLE C
Literacy in %
(1901-1981)

Year	Persons	Males	Females
1901	5.35	9.83	3.60
1911	5.92	10.56	1.05
1921	7.16	12.21	1.81
1931	9.50	15.59	2.93
1941	16.10	24.90	7.30
1951	16.67	24.95	7.93
1961	24.02	34.44	12.95
1971	29.45	39.45	18.69
1981	36.17	46.74	24.88

schools and a six-fold increase in the number of enrolments. This is because 70% of MP's children and 60% of children throughout the country are daily abandoning schools before even learning the rudiments of reading and writing, the reasons being poverty and illiteracy of parents, low priority to elementary education, meagre funds, lack of basic infrastructural facilities like school buildings, teaching aids and equipment and large scale absenteeism among teachers. About one-third of the 60,000 schools in the state are run in open air and around half of them are one-teacher schools. Basic teaching aids like chalks, slates, blackboards, text books and exercise books are in chronic short supply or entirely unavailable. While figures with regard to each of these

curricula should encourage pupils to respect and take pride in work. It would be, for instance, more wise and useful to teach a rural child what to do in case of a bad harvest than lecture him on the history of British India.

Further school holidays are timed to accommodate urban preferences, not the work cycle of agrarian life. This discourages parents to send their children to school and thereby lose their services during sowing and harvesting seasons. Holidays must coincide with periods in the year when the need for labour in the field is the greatest.

Besides, many rural families simply cannot afford the cost of first putting their children into school and then meeting the recurring expenditure of educating them. To attract and retain children in schools, incentives like free uniforms, textbooks and mid-day meals should be, as a rule, worked into the rural education system.

Rural Women

Over 70% of Indian women live in rural areas. The typical picture of a rural woman that is conveyed to the urban mind is of a simple, hardworking, unsophisticated woman enjoying a certain degree of independence due to her individual earnings. However, this is only an incomplete and superficial picture. Rural women are besieged by innumerable problems and rural development programmes should give attention to this group.

The Female literacy rate in India is one of the lowest in the world—only 25% women are literate. Kerala has the highest literacy rate for women in rural areas while Rajasthan has the lowest. Although most rural women are engaged in agricultural work and at construction sites as contract labour, yet they suffer from severe unemployment and also under-employment. Although the life expectancy of woman has gone up since independence, yet

the burden of repeated child-bearing, malnutrition and the drudgery of work still exact a heavy toll on the life of the average woman in the rural areas. Further, due to ignorance, illiteracy and socio-economic inertia they are unable to benefit from the health services, family planning, etc that are open to them (see *CCTimes*, Aug '85, *Population: Its Various Dimensions*). The low status of women due to child-marriage, dowry, purdah and other oppressive social customs keeps them in an inferior position and certain development projects have been undertaken for women in rural areas. The Kasturba Gandhi Memorial Trust which concentrated on education, health activities and socio-economic programmes such as *Khadi* and village industries was one of the earliest agencies to give definite direction to women's development in rural areas. The Central Government with UNICEF aid, introduced the scheme of Family and Child Welfare Project (F & CWP), an integrated programme to impart welfare services to women and their children in the fields of childcare, nutrition, health, and home-management. Assistance was also provided by mahila mandals and voluntary agencies. The Integrated Child Development Services (ICDS), begun in 1975, provided a network of 'anganwadis' projects, which provided mobile crèches for children, health and nutritional services for both mothers and their children. A particular method of teaching through the theatre medium using the 'Plaid' (scroll) to educate adult women in rural areas has also been undertaken. An attempt to provide employment opportunities to women through cottage industries has also been made.

However all these measures though they have achieved moderate success still in no way combat the myriad problems faced by women in rural areas sufficiently, and it is only by a stronger commitment to this cause can the desirable progress be attained.

emerged as the greatest beneficiary of the changes that have taken place. The low castes, though they are still very poor, are no longer subjected to exploitative practices like 'begar'.

Why has India's land reform programme, despite ambitious objectives, failed to benefit the rural poor?

Land reform is not an abstract concept but must be looked at from the point of view of the interests of a particular group. For the middle level castes, land reform has been a definite success. They have acquired land not only from the land reform policies but also from market purchase. Now these 'new rich' castes have no traditional obligations towards the low castes as was characteristic of the traditional rich castes and oppress them even more severely. Though in some states such as Kerala, Karnataka and West Bengal some degree of equitable distribution has taken place, on the whole the rural poor have not benefited much. One of the primary reasons for this is that when a social upheaval occurs, the poorest sections are motivated to join the struggle with certain promises, yet once the new powers are in the saddle, the middle group does not want to share the benefits with the lower ones.

In the present day, for understanding rural conflict, which would you suggest is more crucial—caste or class factors?

I have my own view of this. If you go to the village and get the point of view of the victim of a political conflict you will find that caste and class factors are not isolated factors. The 'new rich' such as the rising middle castes make use of the instruments of both caste and class to further their own interests. Though earlier caste had some elements of a protective nature, now it is increasingly used as a mechanism for exploitation. An emerging class is a multi-caste phenomenon, and many class battles are fought in the guise of caste battles. Violence against Harijans is not because they are Harijans, but only by keeping them suppressed as a reserve army of labour can the upper castes prosper.

What suggestions would you give to make India's rural development programmes more productive and effective?

The difficulty with the rural development programmes is that while there is one programme for growth, there is another to fight poverty—anti-poverty programmes. These different orientations work at cross-purposes, neither helps the other. Hence the two must be suitably combined. Policies should be formulated with a definite emphasis on the small or marginal farmer. Besides, all crop cultivation problems cannot be solved. Forestry, dairy, poultry and rural industrialisation are other sources that need to be tapped. Rural investment programmes providing opportunities for the rural rich to invest their wealth, which otherwise will be dissipated must be provided. The problems posed by the wealth acquiring middle peasantry—the rural nouveau-riche, which is extremely aggressive towards the rural poor at whom it directs the blame for its oppression need serious attention.

Hence there is a tremendous gap between economic and social change, where social and cultural change is sadly lagging behind. This needs to be bridged.

A.N

AN AGRARIAN RENAISSANCE

Dr P.C. Joshi, doyen of the Institute of Economic Growth, University of Delhi, has written many important books and made several notable contributions to national and international journals on subjects related to economic development. In the following interview, Dr Joshi makes an incisive analysis of India's rural development policy, changing agrarian structure and suggests ways for making India's rural development more effective.

After 38 years of independence how would you review the patterns of change that have come over rural India?

Firstly, let me state that it is a matter of perspective the higher and lower classes viewing the trend of change in contradictory ways. The traditional rich classes such as zamindars, talukadars and jagirdars who have lost their control of land, monopoly over power, and also their supreme prestige, the 'ancient regime' of the landed gentry, will say that a revolution has taken place. The lower castes who were below them in the hierarchy are now in principle their equals and even their competitors. However for the poor castes and Harijans, not much has

really changed in the objective world. Although in terms of thoughts and beliefs there has been tremendous change, in the material world of property, education or wealth, their lot is hardly better than before. For these people there is a tremendous gap between vision and reality, promise and upliftment.

From the historical perspective we find a break from colonial stagnation. Before independence, the rate of population growth was greater than the rate of food growth. Recurrent famines, chronic starvation and widespread hunger was the usual situation. After independence, India has witnessed tremendous development in some regions such as Punjab. The green revolution has brought about a boom in wheat output. The rural economy has been transformed into a production-oriented economy.

The agrarian situation has also experienced remarkable change. The non-cultivator landlord who thrived on the exorbitant rates extorted through rented land has been replaced by the large owner-cultivator. It has not been possible for the tiller at the bottom to become the owner. The middle caste rural peasantry has

NEWS IN BRIEF

BY SANJUKTA BANERJI & SHYAMALA M. IYER

Nine months of national and international happenings—from January right through till September '85... all compiled and condensed for the Bank (PO) and other forthcoming exams.

INDIA

AWARDED

Padma Vibhushan to Prof M.G.K. Menon, physicist, and Prof N.R. Rao, Director, Indian Institute of Science, Bangalore. The **Padma Bhushan** to Bhimsen Joshi, musician; S. Varadachari, noted scientist and Director, Council for Scientific & Industrial Research; Gurbaksh Singh, the then Vice-Chancellor, Delhi University and 18 others. The **Padma Shri** to film personalities Naseeruddin Shah and Smita Patil, *Mridangist*, Palghar R. Raghu, Olympian P.T. Usha, World Snooker Champion Om Agarwal and 35 others.

Kalidas Samman Award for 1985, carrying a cash prize of Rs. 1 lakh to Kumar Ganotkar for his "excellence in musical performance by synthesising tradition with innovation."

Dr Satish Dhawan, former Chairman of the Space Commission and Dr C.L. Dhawan, a Bombay obstetrician and gynaecologist, in the category of eminent person in science and medical man-curriculum statesman. Dr B.K. Anand and Dr K.S. Sanjiv, in the category of eminent medical man.

UN Secretary-General's Peace Medal to internationally renowned Indian sculptor, Amar Nath Sehgal for his work *The Crushing Burden*.

B.D. Goenka Awards for 1984, with a cash prize of Rs. 1 lakh instituted by the *Indian Express Group of Newspapers* to R.K. Keswani, a freelance journalist of Bhopal for his investigative piece on the Union Carbide; to Prem Bhatia, Editor, *The Tribune*, for his outstanding contribution to journalism.

C.V. Raman Award for research in physical sciences, for 1981 to S.S. Chandrasekhar, Raman Research Institute, Bangalore; for 1982 to Asima Chatterjee of Calcutta University; the **Meghnad Saha Award** for research in theoretical sciences for 1981 to S.M. Alladin of Osmania University; for 1982 to R.P. Rastogi of Gorakhpur University; and the **J.C. Bose Award** for research in life sciences for 1983 to M.A. Viswamitra, Indian Institute of Science, Bangalore. Instituted by the University Grant Commission (UGC).

World Health Organisation Sasakawa Health Prize for 1985 jointly to the Society for

Education, Welfare and Action (SEWA) of rural district Bharuch in Gujarat, Dr Jesum C. Azurim of the Philippines and Dr David Berch Ecobar of Columbia.

1985 Asan World Prize for Literature to noted Indo-Anglian poetess Kamala Das, the first Indian to receive the prize

Lenin Peace Prize for 1983-84

posthumously to Mrs Indira Gandhi for her outstanding contribution to preserving and strengthening of peace. Sharing the honours are Vietnamese Vice-President Nguyen Huu Tho, West German public figure Joseph Weber, French scientist Jean Marie Legait, Colombian writer Lyujis Vidales and Swedish public figure Eva Palme.

Dadasaheb Phalke Award for 1985, carrying a cash prize of Rs. 1 lakh, to Satyajit Ray.

1985 Nehru Fellowships to social scientist Han Krishna Paranjape, geologist Shitindramohan Naha and playwright C. Shankar Pillai.

Nehru Award for Engineering and Technology for 1983 with a cash prize of Rs. 1 lakh to Satish Dhawan, former Chairman of the Indian Space Commission, and Raja Ramanna, Chairman of the Atomic Energy Commission. The award for social sciences went to former Planning Commission member K.N. Raja.

Nehru Award for Sciences for 1983, carrying a cash prize of Rs. 1 lakh and a citation, to M.G.K. Menon, Member, Planning Commission.

US Presidential Medal of Freedom, America's highest civilian award, to Mother Teresa, in recognition of her work among the poorest of the poor in the world.

Jnanpith Award for 1984, carrying a cash prize of Rs. 1.5 lakhs, to Malayalam writer Thakazhi Shiv Shankar Pillai.

Jawaharlal Nehru Award (1985) for strengthening Indo-Soviet friendship to academicians V.A. Kotelnikov, novelist Chingiz Aitmatov, orientologist G.K. Shirokov and Indologist L.V. Mitrokhina.

Jamnalal Bajaj Awards (1985) carrying a cash prize of Rs. 1 lakh to veteran Gandhian and former parliamentarian T.S. Avinashalingam (outstanding contribution in the field of constructive work); Sanjit Roy of Tilonia village in Rajasthan (application of science and technology for rural development) and Amal Wagh of Kosbad, Maharashtra, a prominent social worker (outstanding contribution to the welfare and uplift of women and children).

UNESCO's Education for Peace Prize (1985) to India's Gen Inderjit Rikhye for his work through the World Institute for Peace, New York; and East Germany's Georg Eckert Institute, for organising international meetings

on school books.

Dadabhai Naaraji Memorial Prize for contribution to the development of science and scientific institutions in India to H.N. Sethna, former Chairman, Atomic Energy Commission.

Ramon Magsaysay Award (1985) for International Understanding to Murlidhar Devdas Amte.

APPOINTED

Dr M.S. Sanjeevi Rao, former Deputy Minister for Electronics, as the Chairman of the Electronics Commission.

Arjun Singh, CM of MP as the Governor of Punjab replacing K.T. Satarawalla.

P. Venkatasubbaiah, former Minister of State for Home as the Governor of Bihar, replacing A.R. Kidwai.

Mohammad Usman Ari, former Deputy Minister for Works and Housing, as the Governor of UP, replacing C.P.N. Singh.

Pranab Mukherjee, the former Finance Minister as the President of the West Bengal unit of the Congress(I), replacing Ananda Gopal Mukherjee.

P.C. Alexander, former principal secretary to the PM as India's next High Commissioner to Britain.

Justice P.N. Bhagwati, as the Chief Justice of the Supreme Court of India succeeding Y.V. Chandrachud, who retired on Jul 12.

L.K. Jha, former Chairman of the Economic Administrative Reforms Commission, as Adviser to the PM on administrative reforms, with effect from Jul 11.

D.A. La Fontaine, Air Marshal, as the new Chief of Air Staff with the rank of Air Chief Marshal, succeeding L.M. Katre, who died in office on Jul 1.

K.K. Mathew, former Supreme Court Judge, to head the commission of inquiry constituted by the government to determine the specific Hindi-speaking areas of Punjab which shall be transferred to Haryana in lieu of Chardigarh.

D.A. Desai, retired judge of the Supreme Court, as Chairman of the reconstituted Law Commission.

D.M. Mishra, Director-General of the Central Reserve Police Force, as Director-General of the Central Industrial Security Force.

M.L. Wadhawan, member (anti-smuggling) in Central Board of Excise and Customs, as Director-General of the newly formed Central Economic Intelligence Bureau.

S.S. Barnala, as CM of Punjab on Sep 29.

M.H. Beg, former Supreme Court Judge, as head of Minorities Commission.

Y.V. Chandrachud, as head of the commit-

tee examining the constitutional aspects of the Assam-Meghalaya border question.

Justice A.N. Sen of the Supreme Court as Chairman of the Press Council.

Ashok Gehlot, former Union Minister of State for Tourism and Civil Aviation as President of the Rajasthan PCQI replacing Naval Kishore Sharma.

ELECTED

M. Thambi Durai, 38, of the AIADMK, as the youngest Deputy Speaker of the eighth Lok Sabha.

Najma Heptulla, of the Congress (I), as the Deputy Chairman of the Rajya Sabha.

Balram Jakhar, Speaker of the seventh Lok Sabha, re-elected unanimously to the office by the eighth Lok Sabha.

M.L. Fotedar, political advisor to the PM, to the Rajya Sabha in a by-election from the UP Assembly constituency.

H. Storken, as President of the Inter Parliamentary Union (IPU), defeating Balram Jakhar by a mere five votes.

VISITED

Jigme Singye Wangchuk, King of Bhutan, on a four-day state visit, beginning Feb 1.

Muammar Abdul Gayoom, President of the Maldives, on a one-day visit, Feb 5.

Wojciech Jaruzelski, Polish PM, Feb 11-15, on a state visit.

Mickey Mouse, the famous cartoon character created by Walt Disney 80 years ago, was in New Delhi, Feb 22, as part of a goodwill tour of the world.

Milka Planinc, Yugoslav PM, Mar 18, on a day's stopover.

Sam Nujoma, President of the South West African People's Organisation (SWAPO), Mar 25.

Mrs Margaret Thatcher, British PM, Apr 13, on a day's official visit.

David Russell Lange, New Zealand PM, Apr 15, on a brief stopover.

Guo Qinglan Kotnis, ageing Chinese widow of the legendary Dr Dwarkanath Kotnis, Apr 1, on a three-week visit to India.

Julius K. Nyerere, President of Tanzania, Aug 24, on a four-day visit.

Sridath Ramphal, Commonwealth Secretary General, Aug 24, on a four-day state visit.

King Birendra Bir Bikram Shah Dev, of Nepal and his wife Queen Aishwarya on a three-day state visit, Sep 18.

PEOPLE

Mohammed Ajeeb: Son of a peasant farmer in Chhatro, Kashmir, elected Britain's first Asian Lord Mayor, as the Mayor of Bradford.

Dr Salim Ali: Famed ornithologist nominated as member, Rajya Sabha.

U.N. Bachchawat: Chairman of wage boards for working and non-working journalists.

B.G. Deshmukh: Chief Secretary to the Maharashtra State Government to inquire into Bombay's Dharavi land scandal.

J.P. Gupta as Chairman, Railway Board, succeeding K.T. Raghavan who has retired.

J.R. Hiremath: India's permanent represen-

tative to the UN Industrial Development Organisation (UNIDO) elected as one of the three vice presidents.

S.P. Jagota: Former Additional Secretary in the Ministry of External Affairs elected as Chairman of the International Law Commission, Geneva.

H.K.L. Kapoor as Chairman of the Union Public Service Commission (UPSC).

Mohan Katre: Special Inspector-General of Police, Maharashtra as the Director, Central Bureau of Investigation.

P.K. Kaul: Former Finance Secretary appointed Cabinet Secretary.

Justice D.N. Kripal: Judge of the High Court, as to head of the commission of inquiry set up to probe the Kaniskha crash that killed 329 people off the Irish coast on Jun 23.

R.N. Malhotra: India's Executive Director at the IMF, as the new RBI Governor.

Justice R.N. Mishra: Judge of the Supreme Court, as head of the commission constituted to hold a judicial inquiry into the Delhi riots.

Prakash Narain as Chairman of the Railway Board.

Amol Palekar: Noted film and stage artist as Chairman of the Children's Film Society (CFS).

Col. N. Pant: Director of the Sankota Rocket Launching Station, as Director, Indian Space Research Organisation.

D.N. Patodia: Elected President of the Federation of the Indian Chambers of Commerce and Industry (FICCI).

R.D. Pradhan: Maharashtra's Chief Secretary as the new Union Home Secretary.

N.S. Randhawa: Appointed Director General of the Indian Council for Agricultural Research (ICAR).

U.R. Rao: Appointed Chairman of the Space Commission.

S.S. Sidhu as Secretary, Department of Tourism and Civil Aviation.

Dr Nagendra Singh: The first Indian to be elected to the Presidency of the International Court of Justice, The Hague.

S.D. Srivastava as Secretary in the Department of Industrial Relations.

S. Venkitaraman as Finance Secretary.

B.G. Verghese: Editor, *Indian Express*, elected President of the Editors Guild of India.

PLACES

Anuradhapura: Was the scene of some of the bloodiest carnages in the history of the Sri Lankan ethnic crises. On May 14 the Tamil Tigers ruthlessly gunned down 150 Sinhalese Buddhists.

Assam: On Jul 18 Assam CM Hiteswar Saikia revoked the Assam Disturbed Areas Act, 1955 and the Armed Forces (Special Powers) Act, 1958, with immediate effect.

Deeg: During the campaigning for the Assembly elections, on Feb 21, Man Singh, an independent MLA and a member of the royal family of Bharatpur was shot dead in an encounter with the police, along with two of his supporters. The controversy raised by the killing forced the Rajasthan CM S.M. Mathur to resign.

Maharashtra: Celebrated its silver jubilee on May 2.

Manipur: On Feb 19, extremists of the

National Socialist Council of Nagaland (NSCN) attacked an army convoy killing 15 security personnel — 13 army jawans and two village volunteer force members. This is the second major ambush in the recent history of the insurgency movement.

Merapani: Thousands of people fled from this town on Assam's border with Nagaland in the wake of clashes between the security forces of the two states.

New Delhi: Was the scene of two international meets. On Jun 28, the heads of states or governments of six nations — India, Argentina, Greece, Mexico, Sweden and Tanzania — got together to express the world's growing concern over the nuclear arms race. On Apr 20, an extra-musical meet of the non-aligned countries co-ordinating bureau was held to demonstrate solidarity with oppressed Namibia.

Sherpur: Punjab village where Sant Harchand Singh Longowal was assassinated.

Thimpu: The Sri Lankan Government officials and leaders of six Tamil militant groups met in Bhatari, capital in a vain bid to thrash out a lasting solution to Sri Lanka's ethnic problems.

Mizoram: A barbed wire fence will be erected to prevent the influx of Chakma tribals into Mizoram from the adjoining Chittagong hill tract.

Bhopal: The MP Government has prepared a Rs 322 crore plan to develop Bhopal on the pattern of the Japanese city of Hiroshima as part of the state's relief and rehabilitation measures for the victims of the Carbide gas disaster. It envisages, among other things, introduction of electric trolley buses for city transport and development of recreational and health care facilities.

ECONOMY

The import-export policy, valid for three years (1985-88), has allowed 210 items of industrial machinery to be imported under the Open General License (OGL), abolished the category of automatic licensing, introduced a new import-export pass book scheme and also a two-tier policy for import of computers and computer based systems. Satellite communication has been included in the computer software export scheme.

The new electronics policy provides for liberalised licensing and a bigger role for the FERA and MRTP companies and Indian companies with foreign equity upto 40%. The idea is to increase electronics production to Rs 10,000 crores in 1989-90.

The new liberalised textile policy has reduced the number of sectors to two, instead of three — the handloom sector and the powerloom sector. To improve the performance of the handloom sector, the policy provides for the modernisation of looms, increase of yarn supply, encouragement of production of mixed and blended fabrics on handlooms, and the reservation of handloom articles for exclusive production.

Drug policy: 82 essential and mass consumption bulk drugs as well as their formulations have been delicensed and their manufacture has been opened to all sectors of the pharmaceutical industry.

Aid India Consortium: Responding to a

strengthen Rome's spiritual ties with the African Church. There are about 77m Catholics in Africa.

Li Xianian, the Chinese President, visited the US and Canada; this was the first-ever visit to these nations by a Chinese head of State.

Franz Josef Strauss, leader of the Bavaria-based Christian Social Union met the East German Communist Party Chief Erich Honecker during the Leipzig trade fair. This was a sign of rapprochement between the two Germanies.

RESIGNED

Gerard Bolla, one of UNESCO's two Deputy Director Generals.

Rashid Karami, as PM of Lebanon. His one-year old government had been torn by crises and had been unable to make any progress towards national reconciliation.

David Stockman, as the US Director of Office Management and Budget. He had been one of the leading figures behind the so-called "Reagan Revolution" in America.

OVERTHROWN

Gaafar Nimeini, President of Sudan, in a coup of the Sudanese armed forces led by the Commander in Chief, Gen Abdul Rahman Suwar Al Dahab. The new regime also suspended the Constitution, imposed martial law and dissolved the Sudanese Socialist Union, the country's only legal political party.

Appollo Milton Obote, President of Uganda in a coup led by Commander Bazilio Olera Okallo.

Maj Gen Mohammad Buhari by Ibrahim Badamsi Babangida, Nigerian Army Chief of Staff, without bloodshed. Buhari had himself toppled the government of former President Shugu Shagari in 1983. The present coup is the sixth in Nigeria's history since its independence in 1960.

SUMMITS

The eleventh economic summit of the leading industrial nations (the US, Japan, West Germany, France, Britain, Italy, Canada, along with representatives of the European Community) was held at Bonn in May. The main goal of the Americans was to start a new round of talks in early 1986 aimed at liberalising world trade. President Mitterand of France blocked Reagan in achieving this goal.

Chancellor Helmut Kohl of West Germany and President Mitterand of France met at Brivan on the West German-Swiss border for a summit in June. Although there were disagreements on Washington's Strategic Defence Initiative and on trade and agricultural policies, the two agreed on the French-sponsored Eureka project which aims at European technological cooperation.

Helsinki Summit: Thirty-five delegations met at the Finnish capital, Helsinki in August to mark the 10th anniversary of the agreements on security and cooperation in Europe known as the Helsinki accords. These included U.S. Secretary of State, George Shultz, and Soviet Foreign Minister, Eduard Shevardnadze, who met for the first time.

The leaders of the 21 member League of Arab States met at Casablanca in August and

agreed to send ambassadors to mediate between several leading Arab states including Syria and Iraq and to condemn Iran for its role in the five-year-old Persian Gulf war. Syria, Lebanon, South Yemen, Algeria and Libya boycotted the summit and some others were not represented by the heads of state.

The 16th annual South Pacific Forum heads of government of 13 countries met at Rarotonga, the capital of Cook Islands. They agreed on a pact that would make the South Pacific a nuclear free zone.

EVENTS

EUROPE Britain

The 51-week-long strike of the National Union of Mine workers (NUM) ended in March as the miners' resolve began to crumble in the face of PM Margaret Thatcher's unwillingness to meet their key demand, the end of a British Government plan to close unprofitable mines. The dispute had resulted in 14 deaths, 9,808 arrests and an estimated \$3b in lost output and other economic consequences.

Trouble of a different nature brewed again in August as BBC news programming was silenced for the first time in 63 years as its employees went on a one-day strike as a protest against the BBC's decision to cancel the showing of a TV documentary on Northern Ireland, *At the Edge of the Union*, following objections raised by Thatcher's Government. It had featured an interview with Martin McGuinness, an alleged leader of the Irish Republican Army (IRA).

Later in the month an aircraft of British Airways flying from London to the island of Corfu exploded on the run-way killing 54 persons. Miraculously, 83 others survived.

France

President Mitterand's Government was involved in a crisis in the summer of 1985 which may have an adverse effect on the socialists' prospects in the legislative elections scheduled for next March. On Jul 10, the flagship of the Greenpeace environmental movement, Rainbow Warrior, was sunk in Auckland (New Zealand) harbour. Fingers pointed towards French involvement, as the ship had been preparing to lead a protest against French nuclear testing in Mururoa Atoll in the South Pacific. A police investigation in New Zealand revealed that French agents had been involved. A stream of Press revelations in France reinforced suspicion that President Mitterand and his advisers had played a role in the scandal which came to be known as the "Underwatergate affair". The President ordered an inquiry and Bernard Tricot repented shortly afterwards that agents had been sent to New Zealand to spy on the ship but had not been involved in the bombing. The Press and the public were not satisfied and Defence Minister, Charles Hamu and the Chief of the Foreign Intelligence Operations, Vice Admiral Pierre Lacoste, were forced to resign. After that PM Laurent Fabius went before national TV and admitted that the ship had indeed been blown up on the orders of Hamu and Lacoste. But this did not clear public scepticism. Poll taken in late September indicated that 52% of the French people believed that Mitterand and Fabius both knew

beforehand about the plan to blow up the ship and 78% of those polled condemned the decision to sabotage it.

W. Germany

The country was shaken by a major spy scandal when Hans Joachim Tiedge, a senior official in West Germany's counter intelligence agency, responsible for ferreting out East German spies operating in West Germany, defected to the East. His defection was preceded by the disappearance of one Sonja Luvsburg, who worked for Minister Martin Bangemann, Ursula Richter, a book keeper for a Bonn-based lobbying group for German refugees from Poland, Czechoslovakia and the Soviet Union, and Loranx Betzing, a close friend of the Richters, who are believed now to be East German spies. A large number of persons, allegedly spies, were rounded up after Tiedge's defection. These include Margaret Hoke, a Secretary for the past 21 years in the office of the Federal President and Reinhard Liebatanz, an associate of Tiedge and head of the counter-espionage unit against right-wing radicals.

In June, far away from Germany, a drama was going on in Brazil, which has close connection with Germany's history. A 25-year long hunt for the Nazi war criminal, Dr. Joseph Mengele, climaxed when his remains were dug up from the cemetery of a small Brazilian town called Embu. The man who had sent 400,000 people, mostly Jews, to death at the Auschwitz-Birkenau concentration camp during World War II, had apparently spent the last years of his life quietly in Brazil. Brazilian forensic experts were almost certain that his remains (bones and teeth) matched his available medical records.

Belgium

Thirty-eight people died and 425 were injured during soccer riots at Brussels' Heysel stadium, just before the final match for the European Soccer Cup Championship between Turin's Juventus and Liverpool, in early June. The Liverpool fans were responsible for the riots and 31 of those killed were Italians.

Denmark

Two explosions occurred in Denmark in late July, one at the Copenhagen headquarters of Northwest Orient Airlines and the other at Denmark's oldest synagogue in the old city district of Copenhagen. 27 persons were injured in the blasts. The Islamic Jihad, a Shiite Muslim umbrella terrorist organisation took responsibility for the explosions. A telephone caller told Agence France-Presse (AFP) in Beirut that the bombing had been carried out by a Scandinavian cell of the organisation in retaliation for an Israeli attack on the Lebanese village of Qabribha.

European Community

The Treaty of Accession, which will officially bring Portugal and Spain into the European Community in January was officially signed in Lisbon and Madrid in June. In Spain, however, celebrations of the event were cancelled after Basque terrorists killed four persons in three different incidents. The ETA which wants a separate Basque State has long been opposed to the European Community as a "capitalist conspiracy".

Gibraltar

In a symbolic ceremony in February, a gate which had separated Spain from the loyal

British colony of Gibraltar for 16 years, was unlocked. The opening of the gate was a precondition for the holding of talks between Britain and Spain over the future of the Rock. Talks, in fact, were held shortly afterwards between British Foreign Secretary, Sir Geoffrey Howe, Spanish Foreign Minister, Fernando Moran, and Gibraltar's Chief Minister, Sir Joshua Hassan at Geneva.

Italy

The "trial of the century" began in June when Mehmet Ali Agca, convicted of attempting to kill Pope John Paul II in 1981, arrived in a Rome high security courtroom. He and seven other defendants were standing trial, four of them in absentia, on charges related to an alleged conspiracy. Earlier, Agca had maintained that he had acted alone and initially in one courtroom he claimed that he was Jesus Christ and announced the end of the world. But later he changed his tune and suggested that Bulgarian Defendant Sergei Antonov may also have been at hand. He also said that a Turk named Akif had also been present during the assassination attempt. He implicated the Soviet Union, Bulgaria and a secret Italian Masonic lodge. Antonov, however, denied that he even knew Agca.

In July, disaster struck the country when two earthen dams north of the vacation town of Stava in the Dolomite mountains suddenly collapsed. About 200 to 250 people were killed and 100 injured.

Poland

In February, Grzegorz Piotrowski, a Polish secret police captain, was sentenced to 25 years in prison for the murder of Father Jerzy Popieluszko in October 1984. Two of his subordinates, Leszek Pekala and Waldemar Chmielewski, received 15 and 14 years respectively. Adam Pietruszka, a former colonel, who denied Piotrowski's accusations that he encouraged the killing was given a 25-year term. The Politburo and the Central Committee also forced Gen Miroslaw Milewski, the man in charge of the security police at the time of the slaying of Rev Popieluszko to resign. The trial discredited the state security apparatus and suggested the possibility of a plot by communist hardliners against Gen Jaruzelski's leadership.

However, this did not mean that Jaruzelski was becoming soft in his attitude. Shortly after the trial, three Solidarity leaders, Bogdan Lis, Adam Michnik and Wladyslaw Frasyniuk were arrested at Gdansk and charged with attending an illegal mutiny in which decision was to be taken on a strike to protest a proposed increase in food prices. Activists Lech Walesa and Jerry Trzcinski were also picked up but later released. The other three were given prison terms ranging from 2½ years to 3½ years in June. Last year 600 political prisoners had been granted amnesty, but since then about 100 activists have been arrested, according to the dissidents.

SOUTH ASIA

Pakistan

Shahnawaz Bhutto, the son of former PM Zulfikar Ali Bhutto was found dead in Cannes on Jul 18, and this spawned rumours of political intrigue, including the possibility of murder. He was buried in the family burial ground at

Garhi Khuda Beksh and his sister, Benazir Bhutto, the leader of the dissident Pakistan People's Party (PPP), returned to Pakistan from London, where she had been residing since her release from house arrest in 1984. Fearing trouble in Bhutto's home province of Sind, President Zia-ul-Haq placed his forces on military alert there and also placed many PPP leaders under house arrest. Later, Benazir, too, was put under house arrest in Karachi in late August.

In the constitutional field, there were changes in early March, when Zia announced several amendments to Pakistan's constitution by which the President will be able to dissolve the Parliament at will and will be the arbiter of powers under the Constitution. Later in the month, after the elections to the National Assembly, Zia assumed the mantle of an elected President with martial law still in force.

Afghanistan

Fighting continued through the first nine months of 1985. On Jun 12, 20 Soviet built Mig fighters were blown up on the ground in the Shindand air base in western Afghanistan. This amounted to one-fourth of the Afghan Government's air force, but it was not known whether it was the work of the Mujahideen resistance fighters or rebellious members of the Afghan military. The death of 12 Soviet prisoners in blasts at a refugee camp near Peshawar also implicated Pakistan, which had so far claimed that Soviet prisoners were not being held on Pakistan soil. In fact, the Russians alleged that the prisoners had been killed by regular Pakistani troops when they had taken over a mujahideen ammunition dump in a bid to escape. In July the mujahideen launched an attack on a Soviet military air base outside Kabul, the heaviest attack since Soviet troops marched into Afghanistan six years ago. In late August-early September, however, the Russians launched a massive counter offensive on the Afghan border provinces of Paktia and Nangarhar and broke through mujahideen lines on the border.

Nepal

Nepal was rocked by bomb blasts in July as explosions occurred in Kathmandu, Bhairawa, Danghadi and Pokhara. An unknown group called the Samyukta Mukti Behini claimed responsibility. One hundred and twenty five people were arrested including leaders of the outlawed Nepal Congress Party and the Nepali Communist party. This was the first major act of political terrorism in Nepal.

Bangladesh

Lt Gen H.M. Ershad first relaxed martial law, eased censorship and even agreed to hold parliamentary elections before the vote for President. But after the opposition alliances made demands to end martial law, Ershad reimposed full martial law in March, re-instituted censorship and postponed parliamentary elections. Opposition leader Khaleda Zia and Hasina Wazed were put under house arrest and Ali Ahad and other political activists were taken into custody. He then held a referendum on his policies and programmes. About 50% of the population voted, and Ershad claiming that 94% had voted in his favour, took it as an endorsement of his policies and continued to remain in power. Early in April, he withdrew all the concessions he had earlier offered to the opposition parties for their participation in the

parliamentary poll which was cancelled.

In early June, a cyclone ripped through coastal Bangladesh taking 15,000 lives. It devastated seven districts in southern Bangladesh and affected nearly 5m people. The island of Uricher was stripped clean of people and property alike.

Sri Lanka

Spored fighting continued even as intermittent attempts at peace were made. One of the worst slaughters occurred in May when Tamil Eelam guerrillas hijacked a bus, entered the mainly Sinhalese city of Anuradhapura and killed about 100 people. The Sinhalese retaliated by killing 39 Tamils in Jaffna.

There were two rounds of peace talks at Thimpu, Bhutan, in July and August. But both were exercises in diplomatic futility. On the fourth day of the first conference, an apparent attempt on the life of President Jayewardene by three men claiming to be members of the Eelam Revolutionary Organization of Students, was thwarted by the police. On Jun 18, the government had drafted a ceasefire agreement, but it has been violated repeatedly by both sides.

FAR EAST

China

Deng Xiaoping's attempts to modernise China received a further boost at the beginning of the year, when the traditional two-hour lunch break was cut down to one hour. In an article published in February in the journal *Outlook* Communist Party General Secretary, Hu Yaobang, blamed "radical leftist nonsense" for communism's failure to meet the economic goals set in 1949 and emphasised China's new economic philosophy stressing incentives and rewards. In May, in furtherance of this policy, the government lifted price controls in Peking on more than 1,800 food items, thus raising their costs by some 50%. It was also announced that Peking's 5.5m residents would receive a subsidy of 7.5 yuan a month (15% of per capita income) for a year to help pay for the higher prices.

In September, Deng carried out a political tour de force, dislodging almost all his opponents from the party leadership and replacing them with younger, better-educated and more pragmatic people of his choice. Six new members were added to the Politburo, which was reduced from 24 to 20 seats, and three new full members were included in the eleven-person Central Committee Secretariat of the Communist Party. The Chinese Communist Party also had a meeting in September in which 992 delegates were present. The conference approved a draft of a new five-year economic Plan, which reflected Deng's modernisation drive.

On the military front, it was announced in April that the People's Liberation Army be cut back by 1m men and women by the end of 1986. At present it has 4m regulars, supported by 4m Basic People's Militia and 6m Ordinary People's Militia.

Japan

P.M. Yasuhiro Nakasone tried to persuade Japan to liberalise its trade policies first in April

when he urged his countrymen to "buy foreign" and then in August when he appeared before national T.V. to say that his government was taking new steps to open the home market. His plan consisted of 87 measures, which designed to make it easier for foreigners to sell goods in Japan. Under it, Japan promised to reduce or remove tariffs on about 1,853 industrial and agricultural products, as well as to introduce measures to ease import procedures. This was in response to a "Japan-bashing" trade legislation pending in the US Congress.

In August, Japan suffered its quota of air disasters when Flight 123 of Japan Airlines flying from Tokyo to Osaka crashed into a mountain killing 520 people.

Taiwan

A political scandal followed the murder of Chinese-American writer Henry Liu at his home in Daly City, California, last October. He had been a persistent critic of the Kuomintang rule and had recently published a biography critical of President Chiang Ching-Kuo. His murder, said to be politically motivated, was interpreted as a warning to other Chinese Americans not to criticise the Taiwan government. In April, Chen Chi-li, the former leader of Taiwan's Bamboo Union gang and Wu Tun, a gang member, were found guilty of the murder and sentenced to life imprisonment. Meanwhile, a Taiwan military court charged Vice Admiral Wang Hsi-ling, the former head of Taiwan's military intelligence bureau and two of his aides guilty of ordering and plotting the murder. While the first was given a life sentence the aides were each given 2½ year jail terms. However, neither the civil nor the military court tried further revolutionaries out of those charged in the case. However, in the course of an appellate review in June it was revealed that a younger step-brother of the President, Gen Chiang Wei-Kuo, may have been involved in the plot.

Philippines

The Aquino trial continued through 1985. First business woman Rebecca Quijane claimed that opposition leader Benigno Aquino was shot while descending the airplane stairs by a man in khaki. In July, another passenger in the plane, Pelagia Hilario, claimed that he was shot by a man in blue. This version clashed with the finding of the Agrava board, a live member citizens' panel that concluded that Aquino had been killed in a military plot, but supported the government's contention that he was killed by a long community gunman. In September the Supreme Court threw out testimony by Gen Fabian Ver, the armed forces Chief of Staff, currently on obligatory leave and seven other military men about their alleged role in the 1983 assassination. The disputed testimony had been given to the Agrava panel last year. The court's decision would probably lead to the acquittal of the military men.

In August the opposition in the Filipino National Assembly launched an unprecedented resolution to impeach President Ferdinand Marcos on charges that he and his family and friends have enriched themselves at the country's expense. Although the motion was defeated, the opposition vowed to take their cause to the people. In another surprise development in August, the National Assembly began debate on a resolution that is aimed at denying the US access to its Philippine military

installations, the Clark Air base and the US naval station at Subic Bay.

THE PACIFIC

New Caledonia

Violence erupted in January between the French settlers (Caldoches) and the native Melanesians (Kanak) who seek independence after 131 years of French rule. When a French settler was killed near the capital Noumea, about 1,000 Caldoches rioted. Meanwhile, French special envoy, Edgard Pisani, outlined a plan under which New Caledonia would become a sovereign nation, yet remain bound to France by a special "Treaty of accession". President Mitterand toured the territory later in the month to show support for Pisani's proposals. In France, French lawmakers met in August in a special summer session to vote on a modified government plan to create a New Caledonia Territorial Congress that would oversee the transition to a popularly voted independence in "association with France". The Socialist majority in the National Assembly carried the vote 284 to 204. However, tensions ran high between the Kanaks and the Caldoches.

New Zealand

PM Lange stuck to his vow to close the country's ports to all nuclear-armed or nuclear powered ships and in February refused a routine US request to allow an American naval vessel to call on New Zealand during the scheduled Sea Eagle naval exercises to be held in March. Six thousand demonstrators marched in support of Lange's policy in Auckland.

Questions were raised about the future of the ANZUS, the regional defence pact, as Australian PM Bob Hawke announced in March that the annual ANZUS meeting scheduled for Canberra in July, would be postponed, since the US Secretary of State George Shultz decided not to attend it. The US retaliated by cancelling operation Sea Eagle and threatened to deny to Wellington certain regional intelligence, some of which was collected at bases in Australia.

SOUTH-EAST ASIA

Indonesia

The country celebrated its 40th anniversary of independence from the Netherlands in August. Earlier, in May, President Suharto's government controlled Parliament passed legislation making it mandatory for virtually all social and political organisations to adopt the state ideology of *Pancasila*, which is a set of five principle calling for belief in God, justice, national unity, democracy and humanitarianism. But critics say that combined with press censorship, the law has been used to stifle all political dissent.

Vietnam

Vietnam celebrated its 10th anniversary of the end of the Vietnam war in May with a parade in Ho Chi Minh city. From July to September, the country also showed signs of friendliness towards the US. Le Duan's Government announced in July that it would return the remains of 26 American servicemen listed as missing in action (MIA) during the war. Further, it said that it would assist the US in preparing a satisfactory accounting of the fates of an estimated 2,464 MIAs. In September, although it

did not agree to a joint effort by the US and Hanoi, it showed as goodwill overtures. Vietnam has also agreed to an increase in the number of annual visits by US technical experts searching for remains. Foreign Minister, Nguyen Co Thach, also offered to support negotiated power sharing in Kampuchea between Prince Norodom Sihanouk, and the Hanoi backed regime of Heng Samrin, but only after a retreat into exile could be arranged for the Khmer Rouge leader, Pol Pot.

Kampuchea

The year began with a Vietnamese dry season offensive on the country. Their main move was against the Khmer Rouge, especially on the Thai border. By February, more than 40,000 civilians normally under Khmer Rouge control spilled into Thailand, while the Khmer guerrillas dug deeper into Kampuchea. The foreign ministers of the Association of South-East Asian Nations (ASEAN) met at Bangkok and made an unprecedented appeal to the "international community" for "support and assistance to the Kampuchean people" in the "military struggle" to oust their country's Vietnamese occupiers.

Under pressure from Thailand and China, the Khmer Rouge announced the retirement of Pol Pot in September. He was replaced by Son Sen, who had a more acceptable international reputation.

Thailand

On Sep 9, an abortive coup attempt was made to topple the Prem Tinsulanonda Government by a disgruntled former army colonel, Manoon Rongphichoran and his brother Air Force Squadron Leader Manas. Four people including two journalists were killed during the violence and 59 injured.

AFRICA

Kenya

In July-August, a two phase conference to mark the end of the UN Decade for Women was held at Nairobi. The first meeting was Forum '85, a meeting of non-governmental organisations (NGOs) and the second was the official UN conference. At the end, a final paper, *Forward Looking Strategies*, was adopted unanimously.

Ethiopia

It was a terrible year for Ethiopia, as famine ravaged the country. About 850,000 Ethiopians left for Sudan, which itself was suffering from drought. About 8m people were affected in Ethiopia. The government of Lt Col Mengistu Haile Mariam tried to deal with it through foreign relief as well as a scheme which planned the relocating of 2m Ethiopians from the ravaged farmlands of the north to the more sparsely populated but fertile regions of the south-west. However, his government also had to face other problems in the form of a major offensive launched against it by guerrillas of the Tigre People's Liberation Front in May. However, one major source of relief later was the Live Aid concert orchestrated simultaneously in London and Philadelphia in July to collect funds for relief work in Ethiopia. Besides earning \$7m from ticket sales and merchandising and \$7m from TV and broadcast rights, millions more came in from donations after the concert.

ALPHA

offers result oriented and specialised oral/postal coaching for:

CIVIL SERVICES (Prelim) & (Main) EXAMS

CSP BANK contains 3,000 questions and answers for general studies and 1,000 each for optional subjects.

MEDICAL ENTRANCE EXAM

(AIIMS, AFMC, CMC Vellore, Ludhiana, JIPMER and other Medical Colleges)

MEDICO BANK contains 4,000 questions and answers in all subjects.

IIT (JEE) EXAM

TECHNO BANK contains 3,000 questions and answers in all subjects.

MBA ENTRANCE EXAM

(IIMs, XLRI, Bajaj and all Indian Universities)

BE TALLER

FREE 14 DAYS NO-RISK HOME TRIAL OFFER!

A confident erect posture shows a successful person be it male or female. Research has proved that a tall posture is more appealing to the opposite sex. Are you being denied the good things of life just because of a poor posture? Don't despair, whatever be your age and whatever be your present state, here is good news for you.

A Super New Discovery

An amazing programme to correct your posture and improve height is now available in India for the first time. 'NEW HEIGHT' is a comprehensive programme, illustrated step-by-step method, which helps you attain your full height potential. You stand taller and walk with greater stability and confidence.

The NEW HEIGHT programme is absolutely exhaustive, encompassing exercises, diets, visual techniques and even the psychological aspect of attaining a super new posture. This programme is so remarkably effective and easy for both men and women, that it requires no stretching machines, no pills or medications and no expensive equipment! All you need is this amazing programme and your own desire to look better and walk taller. Numerous men and women have increased their height.

You can increase it, too!

Full refund of money guaranteed if you do not gain height by about 5 to 15 cms in just two short weeks.

See amazing results with
NEW HEIGHT

14 DAYS FREE HOME TRIAL OFFER

Try our NEW HEIGHT programme on our unconditional money-back guarantee. This fantastic programme is yours to examine and try for 14 full days. If within this period you don't begin to see dramatic all-round improvement in your posture and height, simply return the programme for a full and immediate refund (less H/F charges) No questions asked!

A TORRENT OF TRIBUTES FROM NEW HEIGHT USERS:

"I didn't think it was possible to gain height. But to my delight, NEW HEIGHT helped me gain 5 cms."

T. S. — Bhuvaneshwar

"I am glad I have grown from 4' 6" to 5' 4" by following step-by-step programme of NEW HEIGHT Thanks"

SBK — Pune

Please note that the NEW HEIGHT COURSE is a book of instructions on how to correct your posture and improve height with the help of certain scientific exercises. IT IS NOT A MEDICINE OR DRUG.

Available by VPP for Rs. 94/- from New Height, Dept. 101-R/25, Mehra Mahal, 15 Mathew Road, Bombay 400 004

POST THIS COUPON TODAY!

NEW HEIGHT Mehra Mahal, 15 Mathew Road, Bombay 400 004

Yes, I want to improve my posture and be taller. Rush NEW HEIGHT for 14-day free home trial. If not fully satisfied, I may return everything for immediate refund (less postage and forwarding charges).

Please tick appropriate box.

South Africa

South African troops attacked 10 suspected African National Congress (ANC) bastions in Botswana in June, killing 14 persons. Pretoria justified the attack by claiming that Botswana had been giving asylum to ANC guerrillas. South African troops also entered Angola twice in May-June to search for South-West African People's Organisation (SWAPO) guerrillas and left many dead.

Violence escalated thereafter in South Africa and the President Pieter Botha clamped a state of emergency on 36 districts in the Eastern Cape provinces, Transvaal and Johannesburg. The UN Security Council adopted a resolution supporting global sanctions against the Pretoria regime. France froze all new investments in South Africa and withdrew its ambassador from Pretoria. The European Community also recalled its envoys for consultations and called for the release of Nelson Mandela, the jailed African National Congress (ANC) leader. It also sent a fact-finding mission to the country. In September, the Reagan Administration which had so far been following a policy of "constructive engagement" bent to pressures from the US Congress and mounting violence in South Africa. It imposed, by executive order, a series of sanctions against South Africa, banning most new loans to Pretoria, prohibiting export of most nuclear technology, and the sale of computers to South African security agencies and import of Kruggerand gold coins.

As violence waxed and waned, Botha set out to make peaceable reforms in the system of apartheid. Earlier this year, the government decided that mixed marriages and sexual relations between whites and non-whites would no longer be forbidden. In September, Botha declared that citizenship would be granted to blacks living in the country's urban areas but who are nominal citizens of the four "independent" homelands in South Africa. A presidential commission also recommended to Botha the scrapping of influx control regulations (or pass laws) by which the movements of the blacks have been controlled since 1952.

CENTRAL AND SOUTH AMERICA

Chile

A killer quake shook the country in March leaving about 200 dead and 2,000 injured. It stretched for more than 1,000 miles, from its epicenter, near the village of Algarrobo, and measured more than 8 on the Richter scale.

Mexico

Tremor after tremor shook Mexico in September leaving about 6,000 dead and 30,000 injured. The worst affected was Mexico city. The US National Earthquake Information Service announced that the great quake registered 8.1 on the Richter scale. This was the earth's worst earthquake in decades.

Nicaragua

The US imposed an embargo on US-Nicaraguan trade, suspended service to the US of Nicaragua's airline and vessels flying the Nicaraguan flag and notified the country of Washington's intention to terminate the 1956 Treaty of Friendship, Commerce and Navigation between the two countries in May. The

Reagan Administration also tried a number of times to win the congressional release of \$14m in US assistance for the contra rebels who are fighting against the Sandinistas, but was unsuccessful. The Nicaraguan President Ortega made a symbolic gesture by visiting Moscow, some East European countries as well as some West European countries in an effort to open a rift between the US and Western Europe over the trade embargo.

The Sandinista Government also continued its war with the contras, who mounted a specially vigorous attack in August on La Palmita, Esteli and La Trinidad. Managua hoped to divert attention from these attacks by raising warnings of an impending US invasion.

El Salvador

The spirit of La Palma where President Jose Napoleon Duarte and leftist rebel leaders met last October, was replaced by renewed fighting. On Jun 13, rebel leaders attacked sidewalk cafes in San Salvador killing 13 people. They warned that this was only the beginning. Later in the year the President's daughter was kidnapped, but no group claimed responsibility. There were also rumblings that the war may spill into Honduras. On Aug 29, Honduran soldiers entered a UN refugee camp for Salvadorans in Honduras and killed two people, injured others and arrested ten on the ground that the camp sheltered Salvadoran rebels. The Salvadoran rebels threatened to attack across the border.

SUPERPOWERS USA

A police raid on a radical cult known as Move in Philadelphia turned into a tragedy in May. The police had planned to fire bomb the headquarters of the cult and force the inhabitants out, but the fire became an inferno and wiped out the entire neighbourhood.

In another disaster in August, Delta Air Lines Flight 191 burst into flames as it tried to land at Forth Worth airport, Dallas. Thirty-one persons of the 160 aboard survived the crash.

Terrorists also struck at the US in different parts of the world. In Beirut Shiite Amal militiamen hijacked TWA Flight 847 in June, took 40 male American passengers off the plane and held them in the city. In San Salvador, six Americans were killed when anti-government rebels struck at roadside cafes.

At home, there was a spy scandal. In May-June, John Walker, a private detective and retired Navy communications specialist, his son Michael an operations clerk aboard the US craft carrier Niimitz and his brother Arthur, a retired Navy lieutenant commander and an engineer for a defense-contracting firm in Virginia, were arrested and charged with spying and delivering classified documents to Soviet agents. President Reagan faced a personal crisis when after surgery it was discovered that he had cancerous cells in his colon. Although surgery to slice out two feet of his colon in July had apparently removed the malignancy, doctors did not rule out the possibility of its recurring in some other part of his body.

Soviet Union

Oleg Gordievsky, officially a Soviet embassy counsellor in Britain, but actually a senior operative of the KGB, defected to Britain in September. Shortly afterwards, Britain expelled

25 Soviet diplomats, trade officials and journalists whom Gordievsky had identified as spies. The Soviets retaliated by expelling 26 British diplomats, businessmen and journalists from Moscow.

East-West

Hopes of a new dialogue between the two sides started early as after a meeting between Soviet Foreign Minister, Andrei Gromyko, and US Secretary of State, George Shultz, in January, the two countries decided to hold a dialogue on arms control. Negotiations began in Geneva in March and has continued on its up and down course. After Mikhail Gorbachov became the Soviet Communist party leader, President Reagan showed a certain amount of eagerness for a summit which was later fixed for November.

In April, Gorbachov announced a freeze on Soviet deployment of intermediate range missiles in Europe till November and invited the US to do the same. He also proposed a freeze on strategic offensive arms and a moratorium on the development of space weapons while arms negotiations are under way in Geneva. The US rejected the Soviet offer. In fact, the Reagan Administration persuaded the Senate to allot \$1.5b for construction of 21 more MX missiles and continued its experimentation on the Strategic Defence Initiative (SDI), which on a number of occasions in the past, had obstructed East-West talks.

Late in September, Soviet Foreign Minister, Eduard Shevardnadze, met Reagan in Washington and presented a new arms control plan as well as a personal letter from Gorbachov. Details of the plan were not clear in October but it appeared that the Soviets would move towards the US position on reducing offensive nuclear weapons if the Americans severely limited their programme of ultra modern Star Wars missile defenses.

MIDDLE EAST Israel

Falashas or Ethiopian Jews were airlifted from Sudan to Israel in January. This was condemned by Ethiopia as illegal and a gross interference in its internal affairs. Thereafter, the Sudanese Government ordered a halt to the airlift codenamed Operation Moses and the Brussels based charter airline which was ferrying the Falashas suspended its operations. Later in the year, the Falashas were again in the news because many of them alleged that they were being discriminated against in Israel.

In the same month, Israel announced a step-by-step withdrawal of an estimated 22,000 Israeli troops from southern Lebanon, where they had been since the Israeli invasion of June 1982. The first stage, which involved the movement of Israeli troops from the front-line positions they had held since 1982 to new locations 17 miles south, was completed on Feb 18. In May, the army began to withdraw from the southeast sector of Lebanon and it was completed in June.

Lebanon, Syria and other Arab countries

Various attempts were made to bring peace to the region. In the beginning of the year Saudi Arabia's King Fahd visited Washington and tried to interest it in using its influence for peace.

(Continued on page 68)

RAJIV'S FOREIGN TOUR IMPRESSIVE PERFORMANCE

British authorities unearthed a plot to assassinate PM Rajiv on the eve of his departure for the UK, on his first official visit. For Rajiv this news must have come with a sense of *deja vu*, for shortly before he left for the US some months earlier, the Americans, too, had discovered a similar plot. Already the British authorities have rounded up about a dozen Pakistanis and Sikhs under the Prevention of Terrorism Acts including four Pakistanis from Pak-occupied Kashmir believed to be leaders of the Jammu & Kashmir Liberation Front (JKLF) and nine Sikh activists of the International Sikh Youth Federation. With the result that UK too, like the US, made the tightest security arrangements ever for any visiting foreign dignitary, for the Indian PM.

While reaffirming UK's support for the stability and unity of India, the British PM Margaret Thatcher decided to extend the scope of the Suppression of Terrorism Act to cover hostile activities carried out by terrorists against India. This Act aims at preventing terrorists and extremists from stalling extradition proceedings in courts on the plea that their actions were based on political reasons. Mrs Thatcher, in a surprise move, also expressed Britain's preparedness to amend Section 5 of the Act which would enable British authorities to take cognizance of crimes against India provided India, too, would amend its Anti-terrorist Act accordingly. This British proposal of a new extradition treaty could go a long way in curbing terrorist activities and extradition of people committing crimes against India and seeking political asylum in UK. Of late India had been urging UK to take action against those who incited violence. Britain is now contemplating bringing this aspect under the purview of this Act, too.

Besides this the two leaders had wide ranging talks on bilateral and international issues before proceeding to Nassau, the capital of Bahamas, to attend the five-day Commonwealth Heads of Government Meet (CHOGM) which was attended by 46 heads of state and government. Once again Rajiv gave a creditable performance on the international scene at the CHOGM summit. The main focus of the summit was on Pretoria's racist regime although other principal concerns of world leaders such as world poverty and the nuclear threat were also covered. While most of the nuclear nations came out with strong criticism of South Africa's racist regime, Mrs Thatcher, not surprisingly, refused to agree on the economic sanctions suggested by most member countries. For the UK has vested strategic and economic interests in South Africa which it is reluctant to jeopardise.

In a major initiative to break the ensuing stalemate and one which received international applause, the Indian PM held emergency discussions with four other leaders—the PMs of Canada, Australia, Zambia and Zimbabwe—in an attempt to evolve a strategy aimed at ending apartheid, while accommodating the British viewpoint. This group, known as the ginger group, was perhaps instrumental for CHOGM (including Mrs Thatcher) giving the South African regime the ultimatum to start dismantling apartheid or else face a programme of voluntary sanctions. Mrs Thatcher also suggested that all the 49 member nations of CHOGM should take unilateral action to preclude the import of South African Kruggerand gold coins.

From Nassau Rajiv flew to New York to attend the 40th anniversary of the UN. He had a series of fruitful talks with several world leaders

including US President Ronald Reagan, President Zia-ul-Haq of Pakistan and PM Zhao Ziyang of China. While his talks with the first two leaders centred around India's concern over Pakistan's nuclear programme, his talks with the latter two are believed to have touched upon the sensitive border issues, too.

Upon leaving New York PM Rajiv Gandhi made a brief 11-hour stopover at Holland where he had talks with the Holland PM, R.F. Lubbers, on bilateral issues like trade, industrial collaboration and transfer of technology. On his return journey the Indian PM made a short unscheduled stopover at Moscow which took political observers the world over by surprise. Apart from discussing global issues, particularly disarmament and bilateral issues, with the Soviet leader Mikhail Gorbachov, Rajiv is believed to have briefed him on the decisions taken at the CHOGM summit and his talks with world leaders. And on the eve of the Reagan-Gorbachov Geneva summit, Rajiv is believed to have expressed India's grave concern over the nuclear arms race. Meanwhile Western analysts are skeptical about the surprise visit and are busy speculating whether there is more to it than meets the eye.

PUNJAB

GOING SOFT ON EXTREMISTS

The Barnala Ministry has extended its full support to the cause of extremism in the state. Not only has it adopted a soft approach towards terrorists but has also constituted a four-member committee under Ajit Singh Bains, a former judge of the Punjab and Haryana High Court, for the quick release of persons convicted or facing prosecution for criminal offences registered against them since Aug '81 or arrested in connection with the political agitation in the state. Already the committee has recommended the release of over 2,000 detainees of which 309 have been released. It has even recommended the release of hardcore extremists.

Perhaps there is some connection between the release of extremists and the spurt in terrorist activity in the state. Among those killed in October were Raipal Kadd, General Secretary of the Congress unit in Fatehgarh Churian and Rani Lubaya, President of the Tam Taran municipal committee.

In his first meeting with PM Rajiv Gandhi since assuming the office of CM Barnala expressed his misgivings on the terms of reference of the Mathew Commission constituted by the Centre to determine the territory which should go to Haryana in lieu of Chandigarh.

The Rajiv-Longowal accord had laid down three criteria for determining this territory. According to these a village would be taken as a unit and its linguistic character, contiguity and other factors would determine where it should go. The Akalis are basically objecting to the expression "other factors" as they feel it is ambiguous.

The bickerings among the Akalis have also not subsided. The Baba Joginder Singh-led United Akali Dal is demanding the immediate implementation of the Anandpur Sahib Resolution. The SGPC President, Gurcharan Tohra, is doing nothing to hide his ambition of becoming the President of the Shiromani Akali Dal—a post held by CM Barnala at the moment. Tohra's opposers are, of course, against this as they feel that it will widen the rift between various factions of the Dal. Meanwhile the All India Sikh Students Federation (AISSF) has broken all links with United Akali Dal.

The Barnala regime has, however, instilled hope in the people of the troubled state. For, Barnala has shown himself receptive to ideas and suggestions from the Centre and has assured the PM that his government will work for peace and progress in Punjab and unity and integrity of India.

ASSAM

ALL SET FOR THE POLLS

The Assam accord has created confusion about the status of the 1966-71 entrants to the state. These people who have now been declared foreigners will lose their voting rights for the next 10 years. However, the ambiguity in defining their status is now coming in the way of implementing various provisions of the accord. The Home Ministry, in consultation with the Law Ministry, is now trying to find a way to safeguard the rights of the affected minorities.

Meanwhile the All Assam Students Union (AASU), the party largely

JNANPITH AWARD

Thakazhi Sivasankara Pillai, the eminent Malayalam writer became the 20th recipient of the prestigious Bharatiya Jnanpith Award this. Instituted by the late Shanti Prasad Jain and his wife Rame Jain this award has achieved such eminence over the years that it is often called the Indian Nobel Prize for Literature. It carries a citation, a bronze cast replica of Vegdevi and a cash prize of Rs 1.5 lakhs.

Pillai is the third Malayalam writer to have won the Bharatiya Jnanpith. Over the past 50 years as a writer, Pillai has contributed to various genres of literature. His best known work is *Chemmeen*.

This year the selection panel included Shriyans Prasad Jain, President Bharatiya Jnanpith, Ashok Jain, its managing trustee and P.V. Narasimha Rao, Union Minister for Human Resources, among others.

responsible for the Assam accord, has now decided to promote a regional political party keeping in view the forthcoming Lok Sabha and Assembly elections in the state. A three-day political convention at Golaghat organised by the AASU resulted in the formation of the Assam Gana Parishad (AGP). Basically a merger of two main regional parties—the Assam Jatiyatebadi Del and the Purbanchaliya Loka Parishad, the AGP's 39-member executive has a sizeable chunk of ex-AASU members including AASU General Secretary Bhagu Phukan and President Prafulla Mohanta. This shifting of loyalties by AASU members is a calculated move. For, according to indications, the AGP has already gained a wide following.

However, the minority backing is obviously not behind the AGP. And the minorities constitute a substantial percentage of the populace. The battle of the ballot will therefore be hard fought.

Meanwhile the AASU and AAGSP have come out with a series of suggestions for speedy industrial and economic development of the state. These include immediate clearance by the Planning Commission for the Subansiri dam project. This multi-purpose project proposed to be located in Ghoghamukh would generate an estimated 4,800 Mw of hydel power. The setting up of a gas cracking unit to use presently flared and wasted natural gas from oil fields in upper Assam, the establishment of an aromatic complex and at least two cement plants each with a capacity of 1,000 to 1,500 tonnes per day and the extension of the broad gauge railway line in upper Assam to touch major towns of the Brahmaputra valley have also been proposed.

However, the major need of the hour is the effective resolution of any discrepancies over the accord. For the revision of electoral rolls have now been completed on the basis of Mar 24, 1971, as the cut-off year. After the polls, however, a new revision for eliminating names of all those who migrated to Assam between Jan 1, 1966 and Mar 24, 1971 will begin in accordance with the terms of the accord. The Election Commission has announced the date for the polls. On Dec 16, 1985, elections for the 14 Lok Sabha and 126 Assembly seats will be held simultaneously.

The ruling party is planning to contest all the Lok Sabha and Assembly seats in Assam. But, with the AGP presenting a formidable opposition it will have to bank heavily on the minority votes.

INDIA-SRI LANKA

SHIFTING STANCES

The Sri Lankan Government's stance towards Tamil militants is in a state of flux these days. One moment they are conciliatory and the next moment hostile. Early this month the government agreed to a few contentious points to facilitate an agreement on the ceasefire monitoring committee. These include expanding the committee to induct new members including some from the list suggested by the Eelam National Liberation Front (ENLF) to Indian Foreign Secretary, Romesh Bhandari. The committee would also be free to receive representatives from the citizens committee as well as determine its own procedures and report its findings directly to the President.

It had also been decided at the time the committee was formed that camps would be intimidated about the timing of its surprise visits, in advance. The ENLF had strongly objected to this since, according to it, this prior information would make the surprise visits meaningless. However, the authorities did not concede to this vital point of contention.

The ceasefire has, (thanks to a slight softening of the Sri Lankan attitude) been extended indefinitely albeit theoretically only. For, the orgies of violence and bloodshed continue on both sides. In fact the Tamil militants are not receptive to the idea of a ceasefire monitoring committee. On the committee's two-day visit to the predominantly Tamil town of Jaffna it was greeted by a series of bomb blasts. Neither are the Sri Lankan authorities themselves adhering to the ceasefire regulations. Rather, the monitoring committee has been explicitly instructed not to interfere with security forces operations against Tamils. This gives them the privilege to continue with their atrocities on Tamils with impunity.

Sri Lankan President Jayewardene himself is not very sure about the approach he should adopt. Of late he has been making concerted efforts to convince the Sinhalese Buddhist hardliners that only a political solution can resolve the ethnic crisis. And at the same time he has been passing statements designed to antagonise the militants. Recently he remarked that he would bring the liberation groups to book. The Peoples Liberation Organisation of Tamil Eelam (PLOTE) retaliated by disclosing its intention to overthrow the Jayewardene Government. "That is our

avowed policy and it is no crime to try and overthrow state terrorism". Another militant group, the Tamil Eelam Liberation Front has stated that the Eelam organisations will form a government-in-exile.

Liberation Tigers of Tamil Eelam (LTTE), the most powerful of the militant groups, is holding out against any settlement that falls short of a separate state for the Tamils. Meanwhile undaunted by these setbacks, India continues to play the role of a pacifying mediator. And has once again sent out invitations to the six Sri Lankan Tamil groups for talks in New Delhi. However, as it has been proved time and again, it would be futile to pin any hopes on these talks.

INDIA-BANGLADESH

SHARING OF WATERS

Nassau served as a stage not only for the CHOGM summit but for some very useful talks between India and Bangladesh as well. It was here that PM Rajiv Gandhi and President Ershad of Bangladesh reached an understanding on the question of sharing of the Ganga waters at Farakka. Under this agreement between the two leaders, the irrigation ministers of the neighbouring countries are to sign a memorandum of understanding for the sharing of these waters for a three-year period commencing from the dry season of 1986. This new memorandum of understanding which will be based on the terms of the 1982 agreement which expired in April last year, will provide Bangladesh with 35,000 cusecs of water during the driest months of April and May. This will once again leave the ports of Calcutta and Haldia with less than 40,000 cusecs of water to flush out the silt coming in from the Bay of Bengal.

Initially, however, the irrigation ministers will meet shortly to chalk out the terms of reference of a joint study of the available river water resources. They will also identify alternatives for the sharing of water resources to their mutual benefit including a long-term scheme for augmenting the flow of the Ganga at Farakka. Thereafter the joint study will commence and continue for 12 months. A review will be conducted six months after its commencement and upon completion of the study a decision will be taken on the scheme of augmentation of flow of the Ganga and the long-term sharing of river waters. The new agreement will undoubtedly go a long way in improving bilateral ties between India and Bangladesh as water sharing has been a constant irritant in their relations.

RBI REPORT

CAUTIONS AND RECOMMENDATIONS

The Sukhmay Chakravarty committee which was set up in December 1982 by the Reserve Bank of India (RBI), to review the working of the monetary system, submitted its report in April 1985. The report has now been published by the RBI.

In its report the committee points out the need to keep deficit financing, measured in terms of recourse to credit from RBI, within safe limits because the increased recourse to deficit financing is a disconcerting development. It is also of the opinion that there is an urgent need to introduce some element of price competition among banks. Therefore banks should be free to choose their maturity pattern of deposits except for deposits of maturities of five years and above. The committee also feels that operations of the monetary system should be consistent with priorities laid down in successive five-year plans, in order to make the process of mobilisation of savings and utilisation of these resources 'socially purposive'. It also emphasises the need to finance plans through a non-inflationary manner by tapping the savings of the public in greater measure apart from realising higher savings from the public sector enterprises and improving efficiency in revenue gathering and expenditure functions.

The report categorically states that pursuit of price stability in the broadest sense should be the dominant objective of the monetary authorities. It also envisages a strong supportive role for interest rate policy in monetary regulation based on monetary targeting.

The committee feels that stricter discipline in the use of credit needs to be imposed and has recommended a steady reduction in the cash credit in bank lending and greater resort to financing of working capital through loans and bills.

Among the main recommendations of the Sukhmay Chakravarty committee is the restructuring of interest rates as the committee feels that interest rate policy should have an important role to promote the

effective use of credit in the short-term monetary management; financing the plan through non-inflationary means and modification of the credit appraisal system.

TAMIL NADU

INTENSIFIED INFIGHTING

Politics in Tamil Nadu took an ugly turn following a feud between the regional All India Anna Dravida Munnetra Kazhagam's (AIADMK) Propaganda Secretary, Jayalalitha, and the state Agriculture Minister, K. Kalimuthu. The factionalism in the M.G. Ramachandran-led party had been evident ever since the reinstatement of Jayalalitha to the post from which she had been ousted earlier this year when the ailing CM was in the US for treatment.

But it soon became a full-scale war between the rival groups — one headed by Kalimuthu and Veerapan, a hardliner in the MGR ministry, and the other by Jayalalitha when she allegedly charged Kalimuthu for involvement in a bank fraud case. Incensed, Kalimuthu lashed out demanding her immediate dismissal. But Jayalalitha's benefactor MGR had other plans for her. Apparently he had been contemplating a Cabinet reshuffle to induct her into ministerial ranks. And when Jayalalitha's opposers got wind of this the infighting intensified.

It was then that MGR, in a desperate bid to resolve the crisis that threatened the stability and unity of the AIADMK, resorted to histrionics. He offered to step down in favour of a new leader and gave assurance of his full support to his replacement. But, so much is the adulation and loyalty which he commands from both the masses and ministers alike, that 24 Tamil Nadu ministers immediately resigned en masse to facilitate reconstitution of MGR's state Cabinet. It was only then that MGR revoked his earlier decision and decided to continue in office.

But as has been demonstrated time and again since his illness last year, it is MGR who is the cohesive force keeping his party together and in power. What would happen in the event of MGR's departure is anybody's guess.

CMs MEET

FOR UNIFORM TAX STRUCTURE

The CMs of five northern states, Punjab, Himachal Pradesh, Haryana, Rajasthan and J & K, participated in a meeting of the North Zone Council, on Oct 26, at Mandi. One of the decisions taken at the meeting was to introduce a uniform tax structure to ensure that no state suffered any revenue loss. The Punjab, Haryana and Rajasthan Governments decided to waive the recoveries amounting to Rs 3 crores from the Pong Dam project, at the instance of Himachal Pradesh. Haryana agreed to construct the Chandigarh-Brodiwala road, while the cost of a bridge across Sirsa river would be shared equally by Haryana and Himachal Pradesh. The CMs also decided to pool their efforts to contain terrorism. The Union Home Minister, S.B. Chavan, said that it was decided to refer the question of seeking foreign financial assistance for setting up hydel projects to the Union Finance Ministry and Planning Commission and also that a committee of chief secretaries had been appointed regarding the water supply scheme in Delhi. All the CMs had various suggestions to make. The Himachal Pradesh CM, Virbhadra Singh, urged for sanctions to raise resources to exploit the vast hydro-electric potential of the state. According to him, if funds from both India and abroad were made available, not only would the problem of power shortage in the region be eliminated, but the gestation period of bigger projects would be cut down through improved methods of construction. He pleaded for some kind of immediate assistance for the 14-crores 1,020 Mw Nathpa Jhakri project and five other projects for which global tenders had already been called.

INDIA-CHINA

TOWARDS BETTER TIES?

The sixth round of official level talks, on the controversial boundary issue, commenced in New Delhi. Against the backdrop of cordial talks between PM Rajiv Gandhi and the Chinese PM Zhao Ziyang, at New York. Headed by A.P. Venkateswaran, Secretary in the Ministry of External Affairs, on the Indian side and Liu Shuqing, on the Chinese side, the talks essentially centred around substantive issues relating to the boundary issue on the basis of the principles agreed upon at the last session.

The two delegations were divided into various sub-groups. The boundary sub-groups were headed by R. S. Kalha, Joint Secretary in the

Ministry of External Affairs and Yang Zhengya, head of the Asia Department in the Chinese Foreign Ministry. China has shown a keen interest in improving bilateral ties with India. Already the two sides have arrived at a mutual agreement to take up the dispute sector by sector. This is a very important step forward in Sino-Indian relations. However, after two days of discussions, the Chinese delegation left for Goa. This break is likely to serve as a breather giving the delegates a chance to review their respective formulations and get fresh instructions.

The border dispute in the eastern sector is over small Chinese-occupied pockets in Arunachal and UP, coinciding with the international border. There is a fair chance that an amicable settlement can be made through diplomatic negotiations. However, in the western sector the Chinese occupy a substantial 14,500 square miles of land broadly called the Aksai Chin. The Chinese claim to a small portion of the sector along the road linking Sinkiang to Tibet is actually justified. Over the years, China has displayed a sustained obstinacy to vacate the area. However, with the PMs of the two countries taking an active and keen interest in the present negotiations, the results may not be the usual stalemate.

SEVENTH PLAN

RECEIVING THE GREEN SIGNAL

The National Development Council (NDC) has given its approval to the draft Seventh Five-Year Plan (1985-90). The council dealt with reports of three committees, one of them being the Rangarajan Committee headed by Dr C. Rangarajan, deputy governor, RBI. The council has accepted the Planning Commission view that the Rangarajan committee's recommendation for inflation accounting cannot be accepted.

The NDC has also authorised the Planning Commission to amend maintenance expenditure in select areas like power, roads and irrigation. The question of maintenance expenditure will, however, be viewed at a later stage.

On the issue of centrally-sponsored schemes, the NDC has once again endorsed the Planning Commission's views and is planning to set up a committee of members of the NDC to look into the matter. The recommendation of this committee would be endorsed later before carrying out the necessary modifications in the Seventh-Plan scheme.

There has also been widespread demand for modification of the Gadgil formula for allocation of Central assistance to states, future implementation of anti-poverty programmes and removal of regional imbalances. Dr Manmohan Singh, deputy chairman, Planning Commission, pointed out that special emphasis in reducing regional imbalances and disparities would be given through accelerated agricultural growth. The Seventh Plan would mount a special programme for increasing production of rice and its productivity in eastern India. It is due to constraint of resources that priority has been given to rehabilitation of the railway system and its modernisation. This time there is a slight variation in the plan period. Though drawn for a period of five years, it keeps in perspective the next 15 years.

DATA INTERPRETATION TESTS

(Continued)

At the eleventh hour we spotted some discrepancies in graph (iv). IV of Data Interpretation Practice Tests (see page 50 of this issue). Here's the correct version so that you don't get your answers wrong.

The graph shown above represents the variation of 'probability' (profit earned per unit) with sales volume for three different sales levels.

Probability here means the additional units of profit generated per unit increase in sales. For example, take the curve shown in Fig A. At sales 100 if sales increase to 101, the profit increment would be Rs 0.15 which will be equivalent to the shaded area.

PAKISTAN

CONSTITUTIONAL EYEWASH

President Zia-ul-Haq reached a compromise with the Independent Parliamentary Group in the National Assembly and got the contentious VIII Constitutional Amendment Bill passed unanimously by reducing his excessive powers. However, 48 members of the 237-member Assembly, mostly members of the Official Parliamentary Group, abstained from voting. The 11-party Opposition, Movement for the Restoration of Democracy (MRD), rejected the compromise in the Assembly. It still stands by the 1973 Constitution on which the present Bill has whittled down. According to PPP leader Ghulam Mustafa Jatoi, what the country has now been offered in the 1985 Constitution is essentially presidential, instead of the parliamentary system embodied in the 1973 Constitution.

Even in the 1973 Constitution, the National Assembly can elect the prime minister but that will be only after 1990, when the term of Gen Zia ends on the basis of his referendum. Gen Zia still retains the power to appoint the three Chiefs of Staff, the chairman of the Joint Chiefs of Staff Committee, the Chief Justice of the Supreme Court and the Election Commissioner. It has also been declared that martial law will go after Jan 1. Most of the details of the amended Constitution Bill have not yet been made public; it is already known that though the discretionary powers of the President have been reduced, he still retains enough power to manage state affairs.

In another part of the globe, the lime light was on Shahnawaz Bhutto who died of suspected poisoning in his Cannes apartment on Jul 18. Autopsy reports showed that Bhutto took eight to 12 hours to die, and laboratory tests showed that he had taken neither tranquilisers nor alcohol before his death. His wife, Rehana, was arrested for failure to provide assistance to a person in danger, a crime under French Law. She said that Bhutto was suffering from chronic depression and frequently took alcohol and tranquilisers. His mother Nusrat Bhutto, refuted all these charges. Meanwhile, his sister, Benazir Bhutto, who had been placed in her house arrest since her arrival in Pakistan, was released in early November, with an order to leave the country immediately again.

THE PHILIPPINES

MEDDLERS FROM THE US

Senator Paul Laxalt, chairman of the Republican National Committee and a close associate of President Reagan recently visited the Philippines with a "blunt" message for President Ferdinand Marcos. Although Marcos said that the envoy had not been sent to intervene in the internal affairs of the Philippines, the *Metro Manila Times* headlines read "Another Meddler from the US" and most officials agreed with this view.

The US is apparently concerned about the future of the Marcos regime, and particularly about the security of strategic US facilities at Subic Bay and Clark Air Base. There is a growing guerrilla insurgency in the countryside which is a threat not only to the present government but also US military installations. The US feels that quick political reform would go far to strengthen the regime. Last year the CIA Director William Casey had gone to Manila with a message to this effect.

It is not known for certain as to what Laxalt talked about since both governments are tight-lipped about it. The State Department, however, did say that his mission was to press for political, military and economic reforms. On the political front, the US wants fair municipal and provincial elections to be held next May. They also want more professionalism in the armed forces to ensure victory against the guerrilla forces. The armed forces Chief of Staff, Gen Fabian Ver is now on leave due to his implication in the assassination of Opposition leader Benigno Aquino. His stand-in Lt Gen Fidel Ramos has promoted some modest reforms, and the Americans want him to continue in his office. The administration is totally against the reinstatement of Ver. In the field of economics, the US is worried about "Crowy capitalism" in the Philippines. Recently, there have been allegations that Imelda Marcos and some of the President's political allies have stashed away millions of dollars in the US in real-estate investments. The US is also opposed to political monopolies which dominate the large industries of the Philippines. It feels that financial integrity is required before the people can have faith in the govern-

ment. The Americans still feel that Marcos can save the situation, but only if he brings about reform soon.

Although Laxalt said that he was satisfied with the talks, the question remains whether Marcos would implement any of the American dictates.

EAST-WEST

PREPARING FOR THE SUMMIT

Preparations for the Reagan-Gorbachov summit to be held on Nov 19, are in full swing, with the two sides making offers and the US Secretary of State, George Shultz, visiting the Soviet Union for a pre-summit talk with Gorbachov.

The Soviet Union first made a proposal suggesting an across-the-board 50% cut which would also include US intermediate range missiles, on the grounds that such missiles installed by the US on West European soil are strategic missiles as they are aimed at Soviet territory. While rejecting this interpretation, the US presented its own arms control proposals somewhat later. The US called for a limit of 3,000 warheads on intercontinental ballistic missiles on each side. The US proposal did not include the intermediate range missiles.

As a further step towards an effective arms control, the Soviet Union also suggested that both sides announce a freeze on the development of intermediate range missiles from Dec 1. They suggested that once the freeze is announced there should be a graduated scheme of reduction of the intermediate range missiles on both sides. The Russians feel that within 18 months of the freeze they would reduce the number of warheads mounted on their multiple warhead intermediate range missiles to a number equal to the warheads mounted on similar US, British and French missiles in Western Europe. The US is said to be examining this proposal.

In another important development, the Soviet Union presented to the US a draft agreement which Gorbachov would like to discuss with Reagan during the summit and which would be signed in the form of a communique emerging from the meeting. The text of the possible communique spelling out an agreement covering in principle all nuclear arms control issues, is being examined by US. There is hope all over the world that something positive will develop from the talks between the big two.

SOUTH AFRICA

CONTROVERSIAL EXECUTION

Benjamin Moloise, a poet and supporter of the out-lawed African National Congress (ANC) was convicted for the 1982 murder of Phillipus Selepe, a black policeman and hung in Pretoria in mid-October. His death made him another political martyr and riots broke out in Johannesburg, Cape Town and other parts of South Africa. The international community which had requested the Pretoria regime not to give him the death sentence in an effort to ease tensions, also reacted strongly.

It was never clearly established as to whether Moloise was actually responsible for Selepe's death. He had been shot eight times with an AK-47 rifle and 25 spent cartridges were found near his body. Initially Moloise said that he had murdered Selepe for testifying against three ANC members charged with treason. Later Moloise recanted his confession but he was found guilty. The ANC leaders, on the other hand, stated that Moloise was innocent and Selepe had been killed by a firing squad of ANC gunmen. Moloise again changed his story first saying that he had been forced by the ANC to commit the murder and then stating that he had planned it but not been a party to it.

Whoever may have been guilty, the execution exacerbated the already volatile situation. For the first time, the police acknowledged that they had come under sustained armed attack, but in South Africa, the gunfire is returned bullet for bullet and peace still seems far-off.

Meanwhile, in neighbouring Zimbabwe, PM Robert Mugabe met his political opponent Joshua Nkomo on Oct 2, in what were called "unity talks". Mugabe wants Nkomo to merge his ZAPU party with the PM's dominant ZANU (PF) party and it appears that he may soon succeed in this aim. Mugabe has been using strong arm methods against the ZAPU since the July elections when it won all the 15 seats in Metabeleland, where the Ndebele tribe, to which Nkomo belongs, is in

a majority. Nkomo's passport was confiscated, he was briefly held for questioning and ordered not to leave the country while the "investigations" were going on. Meetings between Nkomo and President Canaan Banana failed to yield results, and Nkomo finally agreed to meet Mugabe without any preconditions. If the parties merge, Mugabe could well be on the way to establishing his declared goal of a one-party state, since his party would control 79 of the 80 parliamentary seats assigned to blacks. Whites will continue to hold 20 of the seats till 1987 unless all 100 members agreed to a change.

CHINA

HOSTILE HOST

Visits to China were undertaken by two important personalities in October—George Bush, the American Vice-President and Shintaro Abe, the Japanese Foreign Minister. In both cases, China voiced grievances against the countries the dignitaries represented. The Chinese asked the US to convey a proposal to Taiwan to the effect that if it should tilt towards independence, China would be bound to "do something". Bush, however, clearly stated that the US was in no position to act as a catalyst to solve the problem between Peking and Taipei. The Chinese are apparently frustrated at the American failure to make more than token cuts in arms sales to Taiwan. This has been further aggravated by the American Congress's attitude to the Sino-US textile and nuclear agreements. Protectionist bills before the Congress could reduce Chinese textile exports to the US by about 500m yen. John Glenn also tabled a Bill recently which would block the implementation of the recently signed nuclear agreement between China and the US, unless the President certifies that it contains no loopholes leading to proliferation. While Bush said that the President would veto any textile bill which affects the Sino-US textile trade, the Reagan Administration has been explaining to the Congress that neither American law nor the Non-Proliferation Treaty (NPT) requires nuclear powers to accept safeguards. China is also piqued by the Reagan Administration's stand on China's birth control policy. In September, the Administration formally stated that China's population policy involves "coerced abortion and involuntary sterilisation".

Meanwhile, China blamed Japan for an adverse balance of payments in its trade with Japan. Chinese leader Deng Xiaoping more or less told Shintaro Abe that anti-Japanese sentiments are growing in China as a result of Japanese policies. The problem is partly historical, because China has never forgotten that it lost 3.2m of its soldiers during its war with Japan in World War II. The 40th anniversary of the Japanese surrender has rekindled anti-Japanese feelings and recently students in Peking, Xian and Wuban held anti-Japanese feelings and recently students in Peking, Xian and Wuban held anti-Japanese protest demonstrations. The immediate cause of the problem, however, is trade. China's trade deficit this year is nearly \$4b, up from last year's \$1.2b, which in itself was a record. China has also accused Japan of exporting sub-standard goods and of not importing enough from Japan. Although Abe put a brave face in front of these complaints and the air may have cleared for the time being, opponents of the Deng regime could use anti-Japanese sentiments to launch an attack on China's open-door policy.

POLAND

JARUZELSKI'S GAMBLE

The state-run Press reported that 78.8% of the electorate had voted in Poland's first parliamentary elections since martial law, while the Solidarity, which had been clandestinely monitoring the polls said that only 86% of Poland's 26m voters had cast their ballots. PM Wojciech Jaruzelski was evidently keen on a large turnout because the outcome was never in doubt. He wanted to prove to the East as well as the West that after almost four years of martial law his government was still popular and had overcome its divisions. To ensure a large turnout he held out a vague promise that he may release 280 political prisoners. At the same time he also held out the threat of a crackdown and several days before the elections a number of union activists were rounded up.

The Solidarity called for a boycott of the elections and on election day about 3,000 Solidarity supporters demonstrated in Gdansk holding up banners with the letters RSA (Movement for an Alternative Society). In the steel-mill city of Nowa Huta, hundreds of youth clashed with plain-clothes police. The Solidarity also claimed that the government had used intimidation to make the Poles go to vote. Despite the government's carrot-and-stick approach, however, the voter turnout was lower than the almost universal turnout for the last legislative elections held five

years back.

The outcome of the elections was as expected. All the candidates for the Sejm, the Polish Parliament, had the approval of the Communist Party-dominated umbrella organisation, the Patriotic Movement for National Rebirth (PRON). Fifty candidates on the so-called National List, had no opposition at all. Poland's mood, however, can be judged from the performance of the candidates. Jaruzelski was placed 44th on the unopposed list of 50.

FRANCE

DEFIANT EXPLOSIONS

France exploded two nuclear devices at its Mururoa Atoll test site in the South Pacific, despite strong protests by the Greenpeace environmental organisation. A motley flotilla of ships of the Greenpeace movement, whose main aims are to protect the environment, save the world's whales and ban nuclear weapons demonstrated near Mururoa earlier, but were asked by the French Navy and Marines to stay at least 12 nautical miles off the island. One of its yachts, Vega, was however, seized off the atoll just a few hours before the nuclear test on Oct 24. Earlier, its flagship *Rainbow Warrior* had been sunk by French secret agents, who are now facing trial in New Zealand.

In another part of South Pacific, the first stage of the French Government's plan for New Caledonia's independence was completed when local elections were held on Sep 29. The pro-independence Kanak Socialist National Liberation Front took control of three regions in the territory, the North, the Centre and the Islands. The fourth region, Greater Noumea remained a majority enclave for the Rassemblement Pour La Caledonie dans la Republique and the Front National, both of which want to remain a territory of France. The anti-independence faction, however, had a 12-seat majority in the new 46-seat territorial congress which was also elected.

Early in October, President Mitterrand was very much in the limelight because of Soviet leader, Mikhail Gorbachev's visit to France. This being the first visit of Gorbachev to the West since he became the General Secretary of the Soviet Communist Party, it was freighted with many expectations most of which remained unfulfilled. However, although no major development in Sino-French relations came out of it, it showed Gorbachev to be an impressive leader, who pursues traditional Soviet goals in a modern—partly Western—manner.

ACHILLE LAURO

TERROR TACTICS

The failed sea-jacking of the Italian ship *Achille Lauro*, the murder of one of the hostages, American citizen Leon Klinghoffer, a stroke victim confined to a wheelchair, and the subsequent interception in flight of the Egypt airplane carrying the hijackers and two representatives of the Palestine Liberation Front (PLF) by American F-14 Tomcat fighters have led to a geopolitical turbulence in different parts of the world. Although claimed as a victory in domestic circles and silently applauded by Western observers (including an understanding nod from Moscow), the interception of the Egyptian airliner instigated university students in Cairo to hold anti-American demonstrations and burn American flags. President Mubarak also voiced his own sense of pain and humiliation at the incident and suddenly relations between Egypt and the US plummeted to a new low.

In Italy, five-party coalition government of Bettino Craxi, which was only one month short of becoming Italy's longest lived government since 1945, collapsed as the Republican Party leader, Giovanni Spadolini, withdrew his support from the coalition. The PLF men aboard the Egyptian plane, including a close associate of Yasser Arafat, Abu Abbas, were allowed to leave Italy on a Yugoslav airliner, and Spadolini was angry at not being consulted about the decision to release them.

Meanwhile, the US, which had been pleased with Italy for having allowed the use of its airport in Sicily to land the Egyptian airplane was upset at the release of the PLF men because evidence provided by the Israelis appeared to prove that Abbas had been actively planning the hijacking. The US is also displeased with Italy, because the latter does not wish to extradite the hijackers of the Italian ship. Further Italian law does not allow the extradition or alleged capital offences to a country which retains the death penalty. The Italians have been stung by the virulence of the American reaction and the Foreign Minister Giulio Andreotti has admitted that the government made a mistake in allowing the aircraft to land at its air base, which has also led to criticism from the communists, that the Italians are being manoeuvred by the Americans. Italy also has close ties with Egypt and reasonably good relations with

the PLO and there is consternation in government circles that these relations may be affected.

The Middle East peace process has also suffered as a result of the affair. Israeli PM Shimon Peres visited Washington recently and drove home the message that since Arafat's PLO was associated with recent terrorist acts, the peace initiative advanced by Jordan's King Hussein and Yasser Arafat should not be considered seriously. The Americans, however, feel that all this is a "temporary dislocation" and no permanent damage had been done either to America's relations with Egypt or to the broader Middle East peace process.

CENTRAL AMERICA

CHAOTIC DEVELOPMENTS

Six days before he was scheduled to address the UN General Assembly, President Daniel Ortega Saavedra of Nicaragua clamped down on civil liberties in the country. His decrees included a 12-month suspension of rights guaranteed under Nicaraguan law to free assembly, internal travel and freedom from arbitrary arrest or searches. Existing state of emergency restrictions like censorship of the Press was reaffirmed and the practice of opening private mail was legalised. Two days later, five were accused of planning a series of bombings in Managua under the orders of the contra group Nicaraguan Democratic Force (FDN), were arrested. The FDN however, denied any connection with the group. Ortega said that he was adopting such severe measures because an "extraordinary situation" had been created by the "brutal aggression" from the US and its internal allies which included some political parties and religious institutions.

Its main de facto enemy, however, continues to be the Contras who operate from Honduras and are supported by the US. The Honduran government has long denied the existence of Contras on their soil. However, recently they were caught red-handed when a DC-6 reportedly carrying 14 tons of medical supplies and clothes (the first instalment of \$27m in humanitarian assistance authorised by the US Congress for the Contras in July), as well as a team of NBC cameramen landed at Tegucigalpa. The Hondurans, who were waiting for the shipment, embarrassedly said that they were confiscating the cargo, but nobody was hoodwinked.

Meanwhile, in El Salvador, President Jose Napoleon Duarte was stuck in the middle of a cross-fire. The leftist guerrillas raided an army training camp at La Union, killing 42 and wounding over 60 soldiers. On the other hand, the President has been negotiating with a guerrilla group called the Pedro Pablo Castillo Front because his daughter, Ines Guadalupe Duarte Duran was kidnapped a few months ago and he wants her released. The kidnappers have demanded the release of 34 rebels imprisoned by the government of which the government has been able to account for only 25. Duarte released three prisoners as a goodwill gesture, but has sought the release of 115 and 23 town mayors kidnapped by the guerrillas in the last few months, in return. The guerrillas refuse to release the mayors and the military leaders in El Salvador are unhappy with the President about the negotiations.

In Panama, President Nicolas Ardito Barletta, who came to office last October, resigned. This was a serious blow to the country's first experience in democratic rule in 16 years, even though he was succeeded by his civilian Vice President, Eric Arturo Delvalle. A number of people believe that Barletta's fall was linked with his pledge to investigate charges that the army had killed a prominent Opposition leader and military critic, Hugo Spadafora. Delvalle has yet to make his mark as a politician and meanwhile, Panama's military strongman, Antonio Noriega, is back in power.

UN

DISUNITY AMONG NATIONS

At its 40th anniversary celebrations, the UN was anything but united. The UN General Assembly failed to produce a declaration to mark the anniversary. There was no consensus on this matter because the statement would have included references to the establishment of a new international economic order and the right of Palestinians to self-determination. The US, while ready to accommodate on issue of the new international economic order was totally against the inclusion of the right of the Palestinians to self-determination.

While the Third World diplomats put the blame squarely on the US for this, the Americans said that a number of nations used the declaration as a "point-scoring exercise". However, on a number of issues, agreement was reached and these included the contribution of the UN to decolonisation, the indispensability of the UN as a forum for

negotiations, lack of universal respect for the UN Charter, the critical economic situation in Africa, the elimination of apartheid and respect for human rights.

As to the superpowers, they struck different notes at the meeting. While the Russians said that there was need to strengthen the world body and spoke of the growing world concern at the nuclear arms race between the US and the USSR, President Reagan still spoke in terms of cold war about ideological differences between the two countries. What was more apparent at the meet, however, were the differences between the North and the South between the developed and the developing nations.

The Security Council also met to mark the UN's 40th year, and it was hoped that the 15 member-states would produce some realistic suggestions about the future of the Council. But nothing came out of the meeting except a number of speeches along familiar lines.

USSR

GIVING RUSSIA A FACELIFT

The Soviet Communist Party's Central Committee met in the Kremlin on Oct 15, to hear Mikhail Gorbachev detail his 5- and 15-year economic plans, the new party platform and the rules to be adopted at the 27th Party Congress to be held next year. But Gorbachev did not comply and gave very few details. He spoke of two-fold increases in national income and industrial output and a rise in labour productivity of 130-150%. This implies an average 4.7% growth rate. According to official figures the Soviet economy has been growing at a rate of 3.5% in the 1980s, and, therefore, Gorbachev's proposed improvement is not too much.

He may, however, be keeping more radical plans tucked up his sleeve. He hinted that his plans may strengthen the resistance of bureaucrats who prefer a status quo. To get his way, he is making changes at the same time. Earlier in the month PM Nikolai Tikhonov resigned and was replaced by Nikolai Ryzhkov, who is known to be an industrial whiz-kid. Ryzhkov was relieved of his earlier job as secretary of the Central Committee so that he could concentrate on government work and also not wield too much power. Nikolai Baibakov, who had headed Gosplan since 1965, also "retired" on Oct 14, and was replaced by Nikolai Talyzin, who has been Russia's man at the Comecon since 1980. The Central Committee also promoted him to the politburo as a non-voting member, a position never given to Baibakov. Gorbachev has thus succeeded in bringing a new generation to power.

Meanwhile, on its border, the Finnish Communist Party defied Russia by expelling the "orthodox" pro-Russian minority faction. The Soviet Communist Party's Central Committee warned the Finns in September that this would have negative consequences for Finland's national interests and friendship and cooperation with Russia. Nevertheless, the Moscow-line district organisations were expelled and the Finnish Party has stated that unless individual members adhere to the mainstream organisation, their names would be struck off the rolls. Finland will join the ranks of other European countries with more than one communist party since the Moscow oriented men have decided to "control the struggle."

PORTUGAL

SOARES SHOCKED

The ruling Socialist Party led by PM Mario Soares, had expected to get 48% of the vote during the recent parliamentary elections. The surprise was that it received only 21% compared to the 37% it had drawn in the elections two years ago. The Social Democratic Party led by Amal Cavaco Silva, which got 30% of the votes was the unexpected winner. Cavaco Silva is expected to form a minority government, possibly in alliance with the Christian Democrats (which also lost ground) early in November. Another surprise was the performance of the newly formed Democratic Renewal Party (PRD) formed by supporters of President Antonio Ramalho Eanes, who will probably take over leadership of the party when his current term ends. The PRD received 18% of the votes. Soares, who was not a candidate in the present elections, will run for President in January, but is likely to face stiff opposition if the PRD puts forward a candidate to oppose him.

The unforeseen results of the present elections were partly a response of the Portuguese public to the austerity programme of the Soares government which brought down the balance of payment deficit from \$3.2b in 1983 to \$500m in 1984, but also lowered the country's standard of living. Unemployment and inflation are both high and the new

(Continued on page 68)

CAREERS LAW

BY ILA SRIVASTAVA

Law studies aren't the exclusive forte of practising lawyers alone. Today a law graduate has a myriad avenues open for the pursuit of a challenging career. A peep into several such doors. Also the enterprising world of women lawyers.

Is legal practice the perfect and only opening for an aspiring law graduate? Well, so it was. But today's progressive world has opened up multifarious avenues for the law degree holders. Besides a law degree is nowadays considered an additional qualification for a number of jobs.

In India several law firms are emerging where more and more fresh graduates are being absorbed and trained to handle their cases in the courts. Joining a law firm has an advantage over private practice, in that one has the opportunity to work with senior and experienced lawyers. Even though in the initial years the firms do not pay the junior assistants more than Rs 300 to Rs 500, the young lawyers get an opportunity to learn the job without the pressures of private practice.

Judicial Services offer an interesting scope for enterprising law graduates. Like in the Civil Services the procedure for recruitment to the Judicial Services is a competitive exam followed by an interview. These exams are held by the State Public Service Commission on the basis of the number of vacancies announced by the respective High Courts every year. After qualifying these exams a candidate is appointed Munsif, Magistrate and then Judge. The only other way to become a judge is to be a practising lawyer for a specified number of years in a particular court.

An expanding new area open to lawyers is the corporate sector both private and public. With their growing dimensions and increased activity, it has become essential for the corporate sector to set up a separate legal department whose main job is to deal with any legal complications which may arise in the company.

Generally the companies give preference to law graduates with two to five years experience in a law court of any other

organisation, for appointment of law officers or legal executives. However, DCM recruits, what they call, law graduates trainees. These persons are fresh law graduates and they are given extensive training on how to handle the work of the legal department.

According to Ajay Verma, law officer, DCM, a legal executive who is employed full time by a company has a three-fold function. Firstly, the advisory-cum-opinion giving function, which arises when the management wants to take a particular action and simultaneously avoid legal complications, which may consequently arise. For example before signing a contract the management consults the law department regarding the legality of the contract and its implications.

Secondly, when, despite best efforts, a dispute arises between the company and any other party, a law officer is expected to act as the link between the management and the lawyers outside. Thirdly, since there is a ban placed by the Bar Council of India on persons employed as law officers from being enrolled as practising lawyers, the law officers are expected to attend to the cases well enough to represent the company in the court. And since they are qualified in law they can understand the procedure and the relative merits and demerits of each hearing better, this helps in quickening the process of justice.

More and more law professionals today are opting for the financial security inherent in an office job because law is basically a very dicey game and the competition is fierce and extremely cut throat. The firm, whether it is a private company, a bank or a newspaper, pays a good salary to its law officers Rs 2000-Rs 5000 depending on their qualifications and experience. Consequently an increasing number of lawyers are lured by the relatively secure opportunities offered by the firms.

Government Jobs

The government sector is another expanding field of employment for law graduates. Qualified law personnel are required in every government office from the law ministry to the municipal corporation. A very good example of this is the Railways which has a vast law department. The Government of India also appoints law translators whose job consists of translating the legal documents into various languages. The appointments are made on the basis of vacancies and the pay scale is Rs 550-900, the gross

salary being Rs 1,600 per month.

For those with an intellectual bent of mind legal research and law teaching are the best avenues. To become a teacher the minimum qualification is L.L.M. The basic pay scale at the starting is Rs 700 to 1500 per month. However, a practising lawyer may teach part time, even with an L.L.B degree.

Law qualified staff is also preferred for para-legal work in the law courts. The jobs are highly lucrative and involve skill.

Legal Aid

In India 40% of the population lives below the poverty line, hence it becomes impossible for every person requiring justice to go to the courts, because the court fees and other expenses involved are tremendous. However, with the growing awareness among lawyers to carry justice to the grass roots legal aid administrators have been instituted. This is a professional area and persons interested in social work and social welfare may opt to work with these professional groups to help secure justice to the needy poor.

Besides these specific fields L.L.B. combined with other qualifications increases the job potential of a student and places him at a higher grade than students without a law degree. For example, if a law student qualifies the Civil Services exams there is every chance that he will be placed at a higher pay scale than others. Law is also helpful in competitive exams and in the conduct of business. Lawyers with science background are also recruited as forensic scientists. Also a degree in law plus social welfare gives an option to the student to be employed by the department of education and social welfare as field officer to assess and survey the working of grass root systems like panchayats.

Ardent to Prof. M.R.M. Menon, Director, Law Centre, Delhi University, "Education is citizen education." The law graduate has studied law is more concerned about the society in general and his own studies in particular. Menon says that a lawyer has failed to make an impact it is due to his own disinterest and lack of encouragement and not because there are too many lawyers in the country. According to him the lawyer-person ratio in India is the lowest in the world, it being only one lawyer for over 3,500 persons. He claims that since India is a country governed by the rule of law the demand for law graduates is always on the increase. There is no question of the profession dying out.

WOMEN IN LAW

BY JYOTSANA KAPOOR

Anjana Gosain

Women lawyers are steadily on the increase. Most of the women lawyers interviewed find the legal profession lucrative and interesting. However "since there are no fixed hours in this profession, one cannot devote enough time to one's home and family." This is one reason why a number of women either prefer to marry lawyers and then assist their husbands or like to take up jobs in firms which means a fixed salary and fixed working hours. But there are women who are facing the challenge of private practice. "Private practice is any time better than a job" says Anjana Gosain, a young and upcoming lawyer. "It is more lucrative and gives a person lot of scope to grow, intellectually as this is one profession where a person is always learning." However, Malini Sood, who works in a solicitor's firm likes her fixed working hours as it means more time at home with her husband and small child. "I may not be earning as much as a lawyer with a private practice, but then I did not have to go through the problems of setting up an independent practice."

Malini has a ready-made office and the company has a reputed clientele. The work involved is as challenging and satisfying as in a private practice. There is no intellectual stagnation as she has to deal with various cases and also attend court.

"The job gives me a sense of security and mental peace as I can take a day off if there is an emergency at home. There are my colleagues to look after my work and represent me in the court and the fear of losing a client is not on my mind. But if I have my own private practice, I will be forever worrying about my cases and my clients at the expense of my home and family". Malini explained.

"To be successful in this profession, one must have a thorough knowledge of the law, and a good command over one's language and also be an extrovert," says Kapila Hingorani, a well known Supreme Court lawyer. Married to a lawyer, Kapila

says that it helps to have your husband in the same profession. "I can discuss my cases with him and get his advice on various points whenever I want. He can also attend to my cases if I am not well and cannot attend the court. Financially also, both of us being in the same profession, has advantages. We can have the same office and also the same library," she says.

Success to Kapila does not mean only money, but a good reputation and standing in the profession. "Integrity and honesty are very important in this profession as one is always handling matters of trust. A woman lawyer to be successful, has to really be in love with the profession as it involves hard work and tension." It takes time to get the feel of the court present the cases briefly and to the point, she adds.

Rajinder Bali, a woman lawyer, has opted for job security. She is the Chief Manager (Head of the department) of all branches of Punjab & Sind Bank in India. Her husband is in a transferable job and that made private practice impossible for

Kapila Hingorani

her. "Law", she feels, "is a good profession for women, as it makes them more aware of their rights and duties. A large majority of women in India are ignorant about the laws which are meant for them and a woman client can feel more comfortable with a woman lawyer. That is why I feel that women lawyers should be allotted separate rooms in the courts. It is only then that women will get the confidence to approach the lawyers themselves."

Rajinder does not believe in women setting up private practice. "A woman's first duty is towards her children and her home. She is first a mother and a wife, then anything else. If she has a lawyer husband, she can assist him in his chamber work, but a woman lawyer I feel cannot do justice to both her home and her practice." Bharti Anand, the Additional Public Pro-

Rajinder Bali

secutor in the High Court of Delhi is a good example of a woman lawyer who is successfully handling both her career as well as her home. Married to a lawyer of repute, she not only assists her husband in his chamber work, but also argues her cases in the court on behalf of the State and still finds time enough to look after her home and children. "Work is not very heavy and gives me a little extra time, though my responsibilities are the same as those of any other lawyer. I have to come home and study the files and prepare the cases", she says.

Bharti who is on the panel of the Delhi Administration for criminal cases, says that she enjoys criminal cases more than civil ones. Being a woman she says, is no handicap. Clients are very respectful and go by the sincerity and dedication of a lawyer and do not discriminate on the basis of sex.

According to Chandramani Chopra a senior lawyer, in this profession women have to learn to fight against their own inhibition and to be aggressive and assertive. No one can afford to be sensitive in the court dealings. Women must also not feel shy about appearing in the court. Exposure helps a person a great deal.

Chandramani fights for the women's rights and says that it gives her a lot of satisfaction to fight for a particular cause. "Women who come to me are in a shattered

Chandramani Chopra

tered state of mind. I help them not only legally but, also mentally and morally to become strong and fight for their rights." She is married to a lawyer and says that it has advantages and disadvantages. Sometimes while dealing with a case the man tries to assert his viewpoint as the correct one. It can put off a woman as every person's approach and style of working is different.

AN EXERCISE IN ENGLISH

BY N.P. SINGH

From comprehension to composition, from precis-writing to correct usage, from synonyms to antonyms, from letter-writing to spotting errors. The entire gamut of essentials that must be mastered before venturing to take the forthcoming Bank (PO) exams— all in a neatly arranged very special package. A package hopeful Bank POs can certainly bank upon.

DIRECTIONS: For each of the following questions, tick mark the choice that best answers the questions. Answers are given at the end of these tests.

Read the passages carefully and answer the questions that follow :

A. I firmly believe that this is the gut challenge for countries like India and China—that is, to motivate their people to leap over several phases of indulgent and wasteful living and so achieve a humane, sophisticated and civilised way of solving the problems of mounting numbers—simple, comfortable living styles. The scale of the challenge could be reduced, but only marginally in the near future considering that reductions in population proceed slowly even in highly disciplined societies.

The effort in this direction of re-designing lifestyles which open an honest perspective of humane existence would be tackling challenges at the frontiers of our social consciousness. In fact, we would be pioneering pathways for the world at large. If the problem of numbers overshadows our thinking in Asia, it will assume all manner of dangers for other lands in the future as they control their growing numbers. Some will become older conglomerations. Others, younger. And we will see imbalances in sex ratios. Every drastic move carries its aberrations.

There will be terrifying migrations carrying explosive ethnic tensions. After all, the standard enjoyed in lands taken over by migrants from Europe and only sparsely inhabited, will draw the poor of the world despite legislative barriers. The poor will push through and assert themselves. This is an on-going movement, and it will find its theoretician. After all, what would be the present fate of Europe, had some 150m stayed on and not moved to the Americas, to Australia, and to Africa?

From *The Illustrated Weekly Of India*

1. Countries like India and China can solve the problem of population

explosion

- (a) by creating new human settlements in de-populated areas
 - (b) by enforcing a new work ethics and culture in rural areas
 - (c) by envisaging an austere, spartan lifestyle for all the people
 - (d) by evolving a decent, dignified lifestyle for all the people
2. An alternate mode of living can be successfully achieved
- (a) if the society is made highly disciplined and cohesive
 - (b) if the people's thinking is innovative and daring
 - (c) if an appropriate intermediate technology is adopted
 - (d) if the leaders can articulate an honest future perspective
3. "If the problem of numbers overshadows our thinking in Asia, it will assume all manner of dangers for other lands in the future as they control their growing numbers." This means that
- (a) while Asia would solve her population problem other continents would fail to do so
 - (b) both Asia and Europe would face dangers of over-population and mass starvation
 - (c) there would be disturbing population trends everywhere in the world
4. What would be the population trend in the future?
- (a) There would be a gradual transfer of population from the countries of Asia to Europe
 - (b) The poor people of the world would be absorbed by the new world
 - (c) The restricted emigration of the poor people would be allowed by the rich countries
 - (d) The poor people would penetrate the barriers and establish themselves firmly
5. Europe escaped a virtual demographic disaster in the twentieth century
- (a) because its population growth was

neutralised by colonial expansion

- (b) because its booming industry could absorb its surplus rural population
 - (c) because its people emigrated in large numbers
 - (d) because its birth rate was drastically brought down
- B. A great deal of discussion continues as to the real extent of global environmental degradation and its implications. What few people challenge however, is that the renewable natural resources of developing countries are today subject to stresses of unprecedented magnitude. These pressures are brought about, in part, by increased population and the quest for an ever-expanding food supply. Because the health, nutrition, and general well-being of the poor majority are directly dependent on the integrity and productivity of their natural resources, the capability of governments to manage them effectively over the long term becomes of paramount importance.

Developing countries are becoming more aware of the ways in which present and future economic development must build upon a sound and sustainable natural resource base. Some are looking at our long tradition in environmental protection and are receptive to US assistance which recognises the uniqueness of the social and ecological systems in these tropical countries. Developing countries recognise the need to improve their capability to analyse issues and their own natural resource management. In February 1981, for example, AID funded a National Academy of Sciences panel to advise Nepal on their severe natural resource degradation problems. Some countries, such as Senegal, India, Indonesia and Thailand, are now including conservation concerns in their economic development planning process.

Because so many governments of developing nations have recognised the importance of these issues, the need today is not merely one of raising additional consciousness, but for carefully designed and sharply focussed activities aimed at the establishment of effective resource management regimes that are essential to the achievement of sustained development.

From *Horizons*

There has been a pronounced deterioration of habitat all over the globe because of

- (a) large-scale deforestation and desertification
- (b) optimum degree of industrialisation in the developing countries
- (c) unprecedented urbanisation and dislocation of self-contained rural communities
- (d) rigorous operation of the Malthusian principle

The poor people of the developing world can lead a happy and contented life if

- (a) there is an assured supply of food and medical care
- (b) economic development takes place within the ambit of conservation of natural resources
- (c) there is a North-South dialogue and aid flows freely to the developing world
- (d) industries based on agriculture are widely developed

3. Technical know-how developed in the USA

- (a) can be easily borrowed by the developing countries to solve the problem of environmental degradation
- (b) can be very effective in solving the problem of resource management in tropical countries
- (c) can be properly utilised on the basis of developing countries being able to launch an in-depth study of their specific problems
- (d) cannot be easily assimilated by the technocrats of the developing countries

4. Some of the developing countries of Asia and Africa have

- (a) laid a great stress on the conservation of natural resources in their educational endeavour
- (b) carefully dovetailed environmental conservation with the overall strategy of planned economic development
- (c) formulated very ambitious plans of protecting habitat in the region
- (d) sought the help of US experts in solving the problem of environ-

mental degradation

b. How much environmental pollution has taken place in the developing and the developed world?

- (a) There has been a considerable pollution of environment all over the globe
- (b) There has been a marginal pollution of environment in the developed world and extensive damage in the developing world
- (c) There has been an extensive environmental degradation both in the developed and the developing world
- (d) The environmental pollution that has taken place all over the globe continues to be a matter of speculation and enquiry

c. These then are the major stages in the life cycle as described by Erikson. The significance of these stages for our traditional ways of looking at personality development and at emotional disturbances in adults is far reaching. By describing stages of personality development beyond those of childhood, Erikson has suggested that there are emotional crisis that are unique to each stage of life including middle age and maturity. Such a position frees the clinician to treat adult emotional problems as failures, in part at least, to solve genuinely adult personality crises and not as mere residuals to infantile frustrations and conflicts.

This view of personality growth, moreover, takes some of the onus for successful development of the parents and takes account of the role which the person himself and society play in the formation of an individual personality. Finally, extending the traditional role of psychoanalysis, Erikson has offered hope for all of us by demonstrating that each phase of growth has its strengths as well as its weaknesses, and that failures at one stage of development can be rectified by successes at later stages.

Perhaps Erikson's innovations in psychoanalytic theory are best exemplified in his psychohistorical writings in which he combines psychoanalytic insight with a true historical imagination. After the publication of *Childhood And Society* in 1950, Erikson undertook the application of his scheme of the human life cycle to the study of historical persons. He wrote a series of brilliant essays on men as varied as Maxim Gorky, George Bernard Shaw and Freud himself. These

studies were not narrow case histories but rather reflected Erikson's remarkable grasp of Europe's social and political history as well as of its literature. In each of these essays, the figures were shown as true historical persons whose lives reflected on and were reflected by the times in which they lived. These biographical sketches like Erikson's later full scale biographies, are a rare species in psychoanalytic personality portraiture because they make a contribution to history as well as to the theory of personality.

From *The American Review*

1. The identity crisis that disturbs the equilibrium of an adolescent is
 - (a) rooted in Oedipus complex
 - (b) derived from parental authoritarianism in the family
 - (c) the result largely of fears and apprehensions of childhood
 - (d) the outcome of conflicts and confusion specific to the period
2. "Finally, extending the traditional view of psychoanalysis, Erikson has offered hope for us all by demonstrating that each phase of growth has its strengths as well as its weaknesses, and that failures at one stage of development can be rectified by successes at later stages." It really implies that
 - (a) personality growth is a continuous, spiralling process from childhood to old age
 - (b) each phase of the life cycle is self-contained and the deficiency at a lower stage can be obliterated at a higher stage
 - (c) personality growth occurs in a dialectical manner
 - (d) each phase of life contributes something positive and something negative to personality formation
3. Erikson developed a new kind of biography in which
 - (a) brilliant portraits of historical persons were successfully projected
 - (b) unique historical figures were pictured as the product of the age
 - (c) three historical figures were depicted both as the creatures and as the creators of the age
 - (d) the historical figures were recreated as the products of the age and also as the pioneers of the new age.
4. How did Erikson verify and substantiate his hypothesis of personality development?
 - (a) He verified and established his hypothesis of personality development by a clinical study of cases
 - (b) He developed his theory of

- personality development through observation and rigorous analysis
- (c) He verified and established his hypothesis of personality development through a careful study of historical figures
- (d) He formulated his theory of personality development by extending Freudian psychoanalysis
5. Keeping in mind his substantial contribution to psychoanalysis, Erikson
- (a) could be safely regarded as a bold rebel against Freud
- (b) could be described as an innovative disciple of Freud
- (c) could be rightly treated as a daring dissenter
- (d) could be taken as a neo-Freudian who affirmed that Freud had nothing to say about man's relation to society and culture

USAGE

- II. Choose the most appropriate answer:
1. Could I rely ——— you to be discreet?
- (a) at (b) upon
- (c) in (d) over
2. We ——— tennis in the garden, when you telephoned.
- (a) had played
- (b) playing
- (c) were playing
- (d) are playing
3. The police ——— the extremist only today.
- (a) have arrested
- (b) has arrested
- (c) are arresting
- (d) are being arrested
4. If he had taken his doctor's advice, he ——— recovered soon.
- (a) would be
- (b) would have
- (c) would have been
- (d) should be
5. There are some birds in Siberia that ——— every year to the Ghana bird sanctuary.
- (a) migrated
- (b) have migrated
- (c) are migrating
- (d) migrate
6. But they lament and express their despair ——— the way Gandhi has been forgotten in his own land.
- (a) over (b) of
- (c) in (d) with
7. The government ——— on this issue.
- (a) is divided
- (b) are divided
- (c) is being divided
- (d) is getting divided
8. If she were here, she ——— her mother.
- (a) could help
- (b) may help
- (c) could have helped

- (d) would have helped
9. I have known her ——— the end of the World War II.
- (a) from (b) since
- (c) during (d) towards
10. Which sentence is properly punctuated?
- (a) No! I shall not go to the game this afternoon.
- (b) No; I shall not go to the game this afternoon.
- (c) No, I shall not go to the game this afternoon.
- (d) No! I shall not go to the game this afternoon!
11. The landlady ——— since the morning.
- (a) has gossiped
- (b) has been gossiping
- (c) gossiped
- (d) has gossiped
12. They have hatched ——— conspiracy to kill the leader.
- (a) a (b) the
- (c) an (d) —
13. We ——— to the seaside for a month every summer.
- (a) went (b) had gone
- (c) go (d) were going
14. It was very dull early this morning, but the sun ——— now.
- (a) shone (b) shines
- (c) was shining (d) is shining
15. We ——— all our money, so we shall have to walk home.
- (a) spend (b) have spent
- (c) spent (d) had spent
16. The plane ——— before I reached the airport.
- (a) took off
- (b) was taking off
- (c) had taken off
- (d) had been taken off
17. In the Middle Ages, people believed that the sun ——— round the earth.
- (a) had revolved
- (b) was revolved
- (c) revolved
- (d) is revolving
18. While I was bathing, she ——— to pop music.
- (a) listened
- (b) had listened
- (c) could listen
- (d) was listening
19. I was told that twenty planes ——— down the day before.
- (a) had shot
- (b) had been shot
- (c) shot
- (d) had been shooting
20. If you had worked regularly, you ——— success in the competition.
- (a) would get
- (b) could get
- (c) must get
- (d) would have got
21. They had been trying to contact us

- two days.
- (a) from (b) for
- (c) since (d) within
22. If you ——— earlier, you would have caught the train.
- (a) had come
- (b) came
- (c) were coming
- (d) had been coming
23. By the year 2000 A.D. the population of India ——— 1,000m.
- (a) will reach
- (b) shall reach
- (c) will have reached
- (d) should reach
24. Indians ——— politically conscious before they got freedom from the British.
- (a) became
- (b) becoming
- (c) had been becoming
- (d) had become
25. We ——— all hang together, or we shall all perish.
- (a) must (b) would
- (c) could (d) might
26. How ——— you speak to me like that?
- (a) should (b) might
- (c) dare (d) may
27. You ——— go to Dubai. Jobs are not available there now.
- (a) need not (b) might not
- (c) could not (d) will not
28. Would you mind ——— on the light?
- (a) to switch
- (b) switching
- (c) to switching
- (d) to turning on
29. ——— you possibly lend me a thousand rupees?
- (a) Could (b) Must
- (c) Should (d) Can
30. He was driven ——— desperation by poverty.
- (a) towards (b) toward
- (c) at (d) on

SPOTTING ERRORS

III Spot the errors, if any:

1. They make me to believe that there was no danger. No error.
- a b c d
- They have proved themselves to be worthy of promotion. No error.
- a b c d e
- Everyone thought it more foolish for you to climb the mountain alone. No error.
- a b c d e
- Would you have the government: No error.
- a b

- to control our lives so comple-
tely. ^c ^d ^e No error.
5. I caught him ^a steal ^b apples ^c from my ^d garden in the village. ^e No error.
6. I have written letters to most of my ^a pupils ^b whom ^c I have not seen for ^d ages. ^e No error.
7. You ^a mustn't take it upon yourself ^b to spend such large sums of money ^c without ^d getting the ^e treasurer approval. No error.
8. It is ^a no uncommon thing ^b for her hus- ^c band to be away from home ^d for week ^e at time. No error.
9. Is it the custom ^a for young people ^b to ^c give up ^d his seat to old people in ^e crowded buses. No error.
10. Everyone ^a was ^b longing for the ^c term to end and the holiday ^d to ^e begin. No error.
11. The ^a meeting comes on a historic ^b moment as measured by the error- ^c mity of change that ^d has taken ^e place in the West and the apparent potential for change in the East. No error.
12. In the past four years here ^a in the US ^b and most broadly in the West, we ^c have ^d experienced a political, ^e economic and social renewal of his-

- toric proportions. ^e No error.
13. Our ^a alliances were ^b savarely ^c shaken ^d and leaders from ^e London to Paris to ^a Moscow were asking whether the US ^b had lost its way, and whether we ^c could ^d darive our ability to play a ^e positive role of leadership in internat- ^a ional affairs. No error.
14. But ^a as we set out on what wa ^b hope ^c will be a more promising period, we ^d should proceed forthrightly, hones- ^e tly stating both our purposes and misgivings, hiding ^a neither our hoga ^b nor fears. ^c ^d ^e No error.
15. It's often said that the rivalry ^a between ^b the US and the Soviet Union is close ^c to immutable, and that our job is end ^d it but merely to keep it under con- ^e trol. No error.
16. Some say that for 1945 there's been ^a only one way ^b to end it, and that way ^c is ^d too terrible ^e to conte- ^a mplate. No error.
17. But ^a for many others, the ^b inevitability ^c of competition is not caused simply ^d by the ^e gruasome facts of the nuclear age. No error.
18. Many in the West ^a are looking for ^b signs off change in the Soviet Union's ^c thinking ^d on international ^e political issues. No error.
19. To the contrary, wa ^a have ^b to take ^c competition ^d as a fact and do the best ^e that wa can. No error.

20. I have studied, reflected and worked ^a on intarnational affairs ^b for many ^c yaars, and no ona has ever ^d excused ^e me that there is some law of natura ^a requiring two populous and powerful ^b nations halfway around the world ^c from each other; to ba lockad in per- ^d manant hostility. ^e No error.
21. If there is a military rivalry ^a among two ^b graat countries, it's caused less ^c by ^d the arms themselves than by the way ^e the two sides think about military security. No error.
22. If there is a geopolitical rivalry, it's not ^a caused by the facts of geography but ^b by the way the two side ^c define their ^d political security and other ^e interests. No error.
23. Some political ideologies ^a are ^b a ^c source of mere boundless energy and creativity, but ^d other are true prisons, ^e confining not only those who be- ^a lieve in them, but many ^b who ^c don't. ^d ^e No error.
24. We know ^a for the statement of Soviet ^b loaders that these days many ^c exciting ^d policies are getting especially close ^e scrutiny. No error.
25. General Secretary Gorbachov himself ^a recently ^b asked to a fresh look at all ^c the ^d shortcomings, ^e negativa ^a phenomena, all sorts ^b of ^c blunders. ^d ^e No error.
26. Overall, it will ^a raquir ^b immanse ^c mobilisation of creative forcas, and ^d the ability to ^e rastructure and con- ^a duct matters in the country ^b in a new ^c ^d ^e

ways; not only in the economy but also in the social sphere. . No error.
e

27. These seem like hopeful words, but
a
perhaps you will agree that those of
b c
us in the West, on the outside, have a
hard time knowing how to interpret
d
them. No error.
e

28. In the past, the appearance of change
a
has been no more than a mask
b c
behind which systematic rigidities
d
endure. No error.
e

29. Each new leader—however strongly
a
he might favour change—have found
b c
that having risen by following the
rules of the system, he becomes cap-
d
tive to it. No error.
e

30. If such a process is beginning, it will
a b
difficult to discern, we may not be
c
able to make a contribution to it, and
we cannot predict its
d
outcome. No error.
e

SYNONYMS

IV Choose the word nearest in meaning to the given word:

1. BARRICADE
(a) bridge (b) barrier
(c) tornado (d) varnish
2. ENCUMBRANCE
(a) disturbance (b) distraction
(c) burden (d) hindrance
3. INQUISITIVE
(a) open-minded
(b) excited
(c) anxious to please
(d) eager to know
4. PRETENSION
(a) pride (b) confidence
(c) presumption (d) claim
5. SOMNAMBULISM
(a) sleep-walking
(b) sleeping-sickness
(c) sea-sickness
(d) sleepiness
6. IMPETUOUS
(a) energetic
(b) excited

- (c) mobile
(d) hasty in action
7. MANNISH
(a) brave as a man
(b) male
(c) man-like woman
(d) confident
8. NUTRITION
(a) good food
(b) good health
(c) assimilation of food
(d) nourishment
9. OMNIVOROUS
(a) present everywhere
(b) eating all kinds of food
(c) non-vegetarian
(d) very powerful
10. OVER-WROUGHT
(a) tired by too much excitement
(b) extremely angry
(c) excess of bitterness
(d) full of nervousness
11. PANORAMA
(a) a beautiful scene
(b) a wide view of something
(c) lush greenery
(d) an airfield
12. ANIMOSITY
(a) animal-like (b) brutality
(c) bravery (d) enmity
13. APPREHENSION
(a) anguish (b) understanding
(c) self-control (d) balance
14. ASTROPHYSICS
(a) science of matter
(b) science of rocks.
(c) science of stars
(d) science of weather prediction
15. ATROPHY
(a) wasting away
(b) grow slowly
(c) reduce in number
(d) stagnate
16. AUDITION
(a) pertaining to sound
(b) good voice
(c) voice test
(d) voice culture
17. AUTHENTICITY
(a) genuineness
(b) trust
(c) faith
(d) self-reliance
18. AVALANCHE
(a) storm
(b) great mass of snow and ice
(c) flood
(d) tornado
19. AVANT-GARDE
(a) literary dictator
(b) a drama critic
(c) an art critic
(d) radical leaders of a literary movement.
20. BABOON
(a) a dog
(b) a monkey with a dog-like face
(c) a chimpanzee

- (d) a gorilla
21. BALLERINA
(a) a woman ballet dancer
(b) a pop singer
(c) a classical dancer
(d) a popular artist
22. BALLYHOO
(a) great noise
(b) approval
(c) noisy publicity
(d) admiration
23. BAMBOOZLE
(a) frighten (b) cheat
(c) anger (d) confuse
24. BARBARITY
(a) savage cruelty
(b) primitive religion
(c) ancient culture
(d) mother cult
25. BAWDY
(a) arrogant (b) proud
(c) vulgar (d) crude
26. BEARABLE
(a) light
(b) easy to carry
(c) small
(d) that can be endured
27. BEFOGGED
(a) muddle-headed
(b) affected by fog
(c) dim
(d) dull
28. BELABOUR
(a) work hard
(b) give hard blows
(c) birth pang
(d) work feverishly
29. BENEVOLENT
(a) too soft
(b) mild
(c) considerate
(d) kind and helpful
30. MISANTHROPE
(a) miser
(b) person who hates mankind
(c) spend thrift
(d) vagabond

ANTONYMS

V Select the word which is nearly the opposite in meaning to the given word:

1. DIABOLIC
(a) simple (b) kind
(c) generous (d) patient
2. GROTESQUE
(a) congruous (b) good
(c) decent (d) acceptable
3. POMPOUS
(a) mild (b) feeble
(c) humble (d) normal
4. HAMSTRING
(a) enlarge (b) awaken
(c) stimulate (d) strengthen
5. IMPULSIVE
(a) cunning
(b) cautious
(c) clever

- (d) considerate
6. AFFECTATION
(a) natural
(b) good
(c) full of love
(d) likable
7. ALLEY
(a) wide road
(b) crossing
(c) intersection
(d) path
8. AMORAL
(a) immoral (b) evil
(c) moral (d) wicked
9. ANALOGOUS
(a) uniform
(b) regular
(c) not familiar
(d) disputable
10. DISSENT
(a) agreement
(b) controversy
(c) dispute
(d) disunity
11. ARTICULATE
(a) dumb
(b) mute
(c) incapable of effective speech
(d) silent
12. BACCHANAL
(a) sober (b) grave
(c) cautious (d) cunning
13. BENIGN
(a) stern (b) strict
(c) harsh (d) malignant
14. CALCULATING
(a) simpleton (b) idiot
(c) artful (d) artless
15. CAMOUFLAGE
(a) reveal (b) project
(c) convey (d) express
16. CASUAL
(a) regular (b) systematic
(c) formal (d) harsh
17. CATHOLIC
(a) narrow-minded (b) rigid
(c) one-sided (d) harsh
18. CHICKEN-HEARTED
(a) rash
(b) full of courage
(c) brazen
(d) venturesome
19. CLANDESTINE
(a) half-closed
(b) open
(c) straightforward
(d) firm
20. COMMODIOUS
(a) small (b) limited
(c) cramped (d) cluttered
21. COMPACT
(a) broken (b) diffuse
(c) enlarged (d) expansive
22. CONSOLIDATE
(a) divide (b) weaken
(c) isolate (d) identify
23. CRABBED

- (a) composed (b) cold
(c) chilly (d) clever
24. DAINTY
(a) wild (b) rash
(c) crude (d) vulgar
25. DECEIT
(a) truthfulness (b) fact
(c) reality (d) trust
26. DEGENERATE
(a) create (b) reproduce
(c) restore (d) progress
27. DEROGATORY
(a) praiseworthy
(b) laudatory
(c) significant
(d) rare
28. ECONOMISE
(a) over-spend
(b) make proper use
(c) get a good return
(d) balance income and expenditure
29. EGALITARIAN
(a) aristocratic
(b) elitist
(c) bourgeois
(d) patrician
30. EGOCENTRIC
(a) altruistic
(b) generous
(c) lavish
(d) spend thrift

PRECIS

VI Make a precis of the following passages:

(a) Lately, the lending policies of the International Monetary Fund (IMF) have come in for a lot of criticism from both the Third World countries and the affluent nations which call the shots. The former have questioned the terms and conditions laid down by the IMF as also its rigid policy prescriptions which do not take into account the particular socio-economic conditions prevailing in the assisted country. And sometimes, the adjustment programmes prescribed by the world lending body have created tensions in the country concerned, as a few years ago in Egypt. The affluent nations, of course, have their own grouse, as they are worried about the debtor nation's inability to repay not only the principal amount but also the mounting interest on it. And in this sort of the Latin American countries find themselves in a hopeless situation, what with their total debt running into hundreds of billions of dollars. Fortunately, India, thanks to its prudent debt management, has scrupulously avoided falling into a debt trap. In the year 1983-84, the debt service repayment to IMF aggregated Rs 1,868 crores which was 11% of India's projected export earnings. In 1985-86, it will aggregate Rs 985.42 crores. What is more, the IMF is fully satisfied with India's performance.

(b) Looking back over the past hundred years or more, it is clear that *Second Wave Society*, classical industrial society, required a certain kind of workforce. For the system to work, it needed workers who would show up at the factory on time, who would take orders, who would do repetitive work, and so on. Unconsciously, a school system took form that, on the surface, varied from one industrial country to the next, yet which, under the surface had certain basic similarities. Thus there is, in every school system, an overt curriculum and a covert curriculum. At the overt level, there are differences from place to place. We teach American history. But underneath, all of these systems teach three basic courses. The first is a course in punctuality. Kids must show up on time or be punished. The second is a course in obedience. Even in schools that pride themselves on teaching kids to think and ask questions the smartest kids quickly discover what questions not to ask. The third is a course in rote work. The school has the task of breaking the child into a life of routine and repetitive toil. In this sense, the schools of the industrial age were a highly efficient anticipation of what life would hold later on. They offered an advanced simulation of adult life. And that was, perhaps, a sensible thing for schools to do. The problem is that the system still teaches the same covert curriculum, even though the world the child will enter no longer requires the same virtues. That's not the kind of workforce that we're going to need in the future. Therefore, I think the time has come for fundamental changes in the nature of this kind of education.

(c) The destruction of forests has a major impact on the productivity of our crop lands. This happens in two ways. Soil erosion increases manifold and the soil literally gets washed away, leading to an accentuated cycle of floods and droughts. But equally important is the impact of the shortage of firewood on the productivity of crop lands. When firewood becomes scarce, people begin to burn cowdung and crop wastes. In many places cowdung and crop wastes are now the major sources of cooking energy. Thus, slowly every part of the plant gets used and nothing goes back to the soil. Over a period of time, this nutrient drain affects crop productivity. Add to this the technology of the Green Revolution: the technology of growing high yielding varieties on a limited diet of chemical fertilisers like nitrogen, phosphate and potash. The total biomass production goes up and so does the drain of the nutrients from the soil. Plants need some 25-odd elements to grow, not just nitrogen, phosphorous and potassium. They keep taking these nutrients from the

soil and the more intensive the agriculture, without any manure and crop wastes going back to the soil, the faster is the nutrient drain.

(d) Sociologist Erich Fromm, in his study on human destructiveness, has commented at length on the effects of rootlessness and the loss of a proper sense of self that afflicts a person living in the world today. Apart from the basic drives of hunger and sex, and the instinct for survival, man also appears to need stimuli that will remind

him of his reason for remaining alive. "He needs," says Fromm, "an object of devotion for a number of reasons. The object integrates his energies in one direction. It elevates him beyond his isolated existence, with all his doubts and insecurity and gives meaning to life. In being devoted to a goal beyond his isolated ego, he transcends himself and leaves the prison of absolute egocentricity." Conversely, Fromm also goes on to demonstrate that when an individual drops out of society for whatever the reason, "the sense of being condemned to ineffectiveness—complete

vital impotence (of which sexual impotence is only a small part)—is one of the most painful and almost intolerable experiences, and man will do almost anything to overcome it, from drug and work addiction to cruelty and murder."

COMPOSITION

VII Write an essay on any one of the following:

- New Education Policy
- Terrorism
- India in 2000 A.D.

ANSWERS

- I A 1. (d) The choice is between c and d.
 2. (b) The key phrase is "innovative and daring"
 3. (c) It is a global problem
 4. (d) The poor people would swarm everywhere
 5. (c) It was emigration that saved Europe
- B 1. (d) Malthus said that population growth would exceed food production.
 2. (b) **Ambit** means extent or limit.
 3. (c) Developing countries have to study their problems carefully.
 4. (b) Dovetail means to fit properly
 5. (d) There is a discussion going on about the extent of environmental degradation.
- C. 1. (d)
 2. (d) Obliterated means to get defects corrected.
 3. (c) Historical figures were both creators and creatures of the age. They were created by the age and to some extent they created the age.
 4. (c) Erikson tried to check his theory of personality development by studying carefully historical figures.
 5. (b) The key phrase is an innovative disciple which means a follower of the master of psychoanalysis who extended the discipline by introducing new concepts.
- II 1. (b)
 2. (c)
 3. (a) The word police always has a plural verb.
 4. (b)
 5. (d) Simple present tense is mostly used to convey a habitual action.
 6. (a)
 7. (b) Government takes a plural verb because we are thinking of its members who have different views.
 8. (a)
 9. (b) Since indicates point of time.
 10. (c)
 11. (b) Gossiping shows continuous action.
 12. (a) Countables are preceded by a.
 13. (c) A habitual action
 14. (d) Continuous activity
 15. (b) Present perfect tense
 16. (c) Past perfect tense
 17. (c) Concord. Past tense follows past tense.
 18. (d) Two activities in continuation.
 19. (b) Past perfect tense.
 20. (d) Third type of conditional (had + v3... would have + v3).
 21. (b) For indicates period of time.
 22. (a) Conditional type 3.

23. (c) Future perfect tense.
 24. (d) Past perfect tense.
 25. (a) Must conveys a sense of obligation.
 26. (c) Dare conveys a kind of threat.
 27. (a) Need not conveys advice.
 28. (b) Would you mind is followed by -ing form of the verb.
 29. (a) Could is used to indicate a polite request.
 30. (c) Driven takes to as a preposition.
- III 1. (b) 2. (e) 3. (b) 4. (e) 5. (b) 6. (e)
 7. (d) 8. (d) 9. (d) 10. (e) 11. (b) 12. (b)
 13. (d) 14. (d) 15. (d) 16. (a) 17. (e) 18. (c)
 19. (a) 20. (c) 21. (b) 22. (d) 23. (c) 24. (a)
 25. (c) 26. (d) 27. (d) 28. (e) 29. (c) 30. (d)
- IV 1. (b) 2. (c) 3. (d) 4. (d) 5. (a) 6. (d)
 7. (c) 8. (d) 9. (b) 10. (a) 11. (b) 12. (d)
 13. (b) 14. (c) 15. (a) 16. (c) 17. (a) 18. (b)
 19. (d) 20. (b) 21. (a) 22. (c) 23. (b) 24. (a)
 25. (c) 26. (d) 27. (a) 28. (b) 29. (d) 30. (b)
- V 1. (b) The correct answer is **kind** because **diabolic** means **crual**.
 2. (a) Since **grotesque** means something strange and fantastic, the correct answer is **congruous** which means **proper and fitting**.
 3. (c) Since **pompous** means a person who takes himself too seriously, the correct answer is **humble**.
 4. (d) Since **hamstring** means to weaken a person or animal by cutting its tendons, the correct answer is **strengthen**.
 5. (b) Since **impulsive** means an action without much thought, the correct answer is **cautious**.
 6. (a) Since **affectation** means unnatural behaviour, the correct answer is **natural**.
 7. (a) Since **alley** means a narrow street, the correct answer is **wide road**.
 8. (c) Since **amoral** means not concerned with morals, the correct answer is **moral**.
 9. (c) Since **analogous** means similar, the correct answer is **not similar**.
 10. (a) Since **dissent** means disagreement, the correct answer is **agreement**.
 11. (c) Since **articulate** means having an effectiveness in speech, the correct answer is **incapable of effective speech**.
 12. (a) Since **bacchanal** means excited and wild, the correct answer is **sober**.
 13. (d) Since **benign** means kind, the correct answer is **malignant**.
 14. (d) Since **calculating** means shrewd and scheming, the correct answer is **artless**.
 15. (a) Since **camouflage** means to conceal or hide, the correct answer is **reveal**.

16. (c) Since *casual* means informal, the correct answer is *formal*.
17. (a) Since *catholic* means liberal and broadminded, the correct answer is *narrow-minded*.
18. (b) Since *chicken-hearted* means one lacking in courage, the correct answer is *full of courage*.
19. (b) Since *clandestine* means secret, the correct answer is *open*.
20. (c) Since *commodious* means having plenty of space, the correct answer is *cramped*.
21. (b) Since *compact* means closely packed, the correct answer is *diffuse*, that is loose.
22. (b) Since *consolidate* means to make solid or strong, the correct answer is *weaker*.
23. (a) Since *crabbed* means badly tampered, the correct answer is *composed*.
24. (c) Since *dainty* means delicate, the correct answer is *crude*.
25. (a) Since *deceit* means a lie, the correct answer is *truthfulness*.
26. (d) Since *degenerate* means to decay, the correct answer is *progress*.
27. (b) Since *derogatory* means damaging, the correct answer is *laudatory*.
28. (a) Since *economise* means to cut down expenditure, the correct answer is *over-spend*.
29. (b) Since *egalitarian* means equality of all citizens, the correct answer is *elitist*.
30. (a) Since *egocentric* means egoistic or self-centred, the correct answer is *altruistic*—a tendency of thinking in terms of other's welfare first.

VI (a) There has been a sharp criticism of the loan policy of the International Monetary Fund. The Third World countries have attacked its terms and conditions unsuited to the prevailing socio-economic conditions. The affluent countries are concerned with the debtor nation's inability to repay the principal and the interest. Some of the Latin American countries have debts mounting to hundreds of billions of dollars. India, however, has managed debt repayment very prudently to IMF's full satisfaction.

(b) The schools in industrial societies have an overt and a covert curriculum. While the overt curriculum takes its place to place, the covert curriculum is the same. The first ingredient of the covert curriculum is punctuality. It is a habit that every worker must possess. The second ingredient is obedience. In schools all kids are expected to be obedient. The third ingredient is a course in rote learning. The pupils in schools are drilled into routine, repetitive work. The schools always endeavour to turn out good workers. Since society is going to change, the content of education would have to be drastically changed.

(c) The destruction of forests has led to soil erosion which in turn leads to floods and droughts. The shortage of firewood forces the people to burn cowdung and crop wastes. The use of chemical fertilisers gives a good crop but soil fertility goes down. It leads to nutrient drain which eventually affects crop productivity. Intensive agriculture, based primarily on chemical fertilisers but not on organic manure and crop wastes going back to soil, leads to soil impoverishment.

(d) Erich Fromm is of the view that man's rootlessness and loss of identity have an adverse effect on his personality. Along with the satisfaction of his basic drives of hunger and sex, man also wants an affirmation of his being alive. This arises from his having a goal beyond his solitary existence. A man who drops out of society has an awareness of his impotence. He will do anything in order to overcome it.

VII New Education Policy

It was the Kothari Commission (1964-66) that laid stress on

the link between education and national development. It recommended a complete transformation of the prevailing system of education which has an elitist bias and is predominantly literary, bookish and divorced from the world of labour. The commission advocated the setting up of common neighbourhood schools, vocationalisation of higher secondary education and greater stress on science and technology in higher education. It also laid stress on the inculcation of moral values through education at all levels.

Nearly 20 years have passed but the transformation of the educational system has not taken place. Drop-out rate is 60 to 70% at the level of elementary education. There is no wonder that out of a population of more than 700m, approximately 70% are illiterate. We are still far from the goal of universalisation of elementary education. Vocationalisation at the higher secondary stage has not succeeded due to the shortage of equipment and non-availability of adequately motivated teachers.

The failure of the scheme of vocationalisation at the secondary stage has led to overcrowding in colleges and universities. Out of nearly three million students at the undergraduate stage, 80% are poorly motivated. They are in colleges because they are not able to find suitable jobs. The new government has realised that India cannot enter the 21st century unless its educational system is fully transformed.

The Union Ministry of Education has published a document entitled *Challenge Of Education—Policy Perspective* on Aug 20, 1985. It has visualised a multi-pronged strategy for the transformation of the prevailing system of education. Universalisation of elementary education would be achieved through the expansion of the formal and the non-formal channels of education. Vocationalisation would begin at the beginning of the secondary stage from class VI level. It would be linked with job opportunities in industries, agriculture and the tertiary sector. Higher education would be meant primarily for those who have the aptitude which would be measured through scholastic aptitude tests.

It is expected that the *New Education Policy* would be ultimately evolved through an intensive debate both inside and outside Parliament. The Members of Parliament, industrialists, administrators, teachers, parents and students are expected to participate actively in the debate.

The finalised New Education Policy would be implemented from the next academic session.

WORK IN COMFORT

Within a short span of three decades, agricultural engineering has undergone a radical transformation thanks to modern agricultural engineering. Machines are fast replacing human beings in hard toil. And while stress is laid on functional performance and safety while devising such machines, due consideration is also given to physical comfort of machine operatives. One such machine, Commendator 116 CS—a harvester—thresher rolled into one—offers superlative ease of operation.

HOW TO TACKLE CAT-4

BY EDGAR THORPE

To do or not to do should never remain an unsolved question for an efficient manager. Quick decision-making ought to be as natural for him as breathing. Here's some more on how the manager-to-be can develop the skills necessary to handle the tough CAT that keeps a watch at the IIM doors.

Management has its relevance in the day-to-day functioning of every individual—at home, at play and at work. No wonder a course in business management has become almost the in-thing today. Management entrance exams including the Common Admission Test (CAT) conducted by the Indian Institute of Management (IIM's) are designed to assess the candidate's general, verbal, mathematical and analytical abilities. Inevitably, those with a sharp sense of observation and the ability to

reason logically would come out with flying colours.

In *How To Tackle CAT-1* (Sep '85), *How To Tackle Cat-2* (Oct '85) and *How To Tackle CAT-3* (Nov '85), we dealt with Sections 1 and 2 (Verbal Ability and Quantitative Ability), Sections 3 and 4 (Reading Comprehension and Quantitative Aptitude) and Section 5 (Data Sufficiency Tests) respectively. In this concluding part we present a detailed feature on Sections 6 and 7 (Business Judgment or Analytical Ability Test and Data Interpretation) for CAT.

BUSINESS JUDGMENT TESTS

Of all management problems, decision-making (to do or not to do) is the most difficult and requires highly professional and technical skills to achieve the desired results. In business organisations, decisions have got to be quick and on time, or the enterprise may soon be out of gear. Professional management of an enterprise requires a scientific mode of decision-making. It requires analysis of the situation, identifying the available alternatives and selection of the final course of action after weighing the pros and cons of all the alternatives. The selection of the right alternative to suit the situation is the art of scientific decision-making. With this end in view, most management courses these days lay emphasis on decision-making aptitude tests. Such tests include Data Evaluation (DE) and Data Application (DA)—broadly called Business Judgment or Analysis of Situation (AS) Test.

The basic idea behind this section is to present the candidate with a decision situation relevant to any commercial/business activity. The candidate is required to analyse the decision situation and answer the questions at the end.

DATA EVALUATION

The Format

This section contains two long passages, each consisting of 800-1,200 words. After each passage a pre-determined answer scheme is given,

which is followed by 15-20 questions. Each question is in the form of a sentence that conveys an idea that has to be classified in accordance with the instructions given in the answer scheme. The time allowed for the entire exercise comprising two passages is 30 minutes, which requires:

- Reading and comprehension of the passages
- Understanding the answer scheme
- Reading and understanding the questions
- Classifying the questions in accordance with the answer scheme.

Hence for each passage, you may allocate 15 minutes in which time you have complete the above exercise. This means to you should be able to read and comprehend the passage in eight minutes leaving six minutes to attempt the questions. This will leave you with a minute's time during which you can review the answer sheet. Similarly deal with the next passage. However, the time allocation can be changed depending on the size of the

passage and the number of questions asked.

This demands quick-reading and comprehension ability which you have to cultivate by reading long editorials and marking the speed of your reading. In other words you should be able to read above 1,000 words in less than eight minutes and simultaneously grasp the gist of the same. This is easily possible because the human brain is capable of responding to at least five stimuli in a second. Hence, a fast reader can read 300 words in a minute (five words per second). Therefore 30 minutes are more than sufficient to deal with this section provided you have practised and familiarised yourself with the format. This section has three parts, viz: (1) Decision situation (or the passage), (2) Instructions or answer scheme; and (3) Questions, each of which is discussed here with a recommended strategy to score high in the exams.

1. Decision Situation

The passage gives the decision situation in which somebody (the decision-maker) has to make a decision. From the passage you have to analyse the following information, viz:

- (a) The goal purpose of the decision-maker
- (b) The options (alternatives) open to achieve the goal
- (c) measurement/judgment of the best option that connects the goal and helps to achieve it.

While carefully reading the passage, note the following points by underlining the same:

- What is the decision required?
- Who is/are the decision-maker/makers?
- What are the options available and what are the constraints attached to each of them?
- What is the goal?

2. Instructions (answer scheme)

The instructions are classified in five parts into which the statements have to be classified, i.e.,

(A) Major Objective

- (B) Major Factor
(C) Minor Factor
(D) Major Assumption
(E) Unimportant Issue

(A) **Major Objective:** From now on for ease of reference we will call it (A). It is one of the outcomes or results aimed at by the decision-maker. The word 'major' implies that the option mentioned has a direct relationship with the final decision. (A) is therefore a final goal/aim or purpose/objective of the decision-maker that has to be achieved by him. The goal in question should be achieved at least partly, if not fully, by the achievement of the objective. (A) generally contains expressions of desire, i.e., what the decision-maker wants to achieve or what is important to him for the success of his business. For identification of (A) note the following generalised points:

- **Action noun:** The construction of the sentence clearly isolates the action noun related to the object/goal in question. For example: "reducing overheads to increase profitability", "expanding for diversification of business for growth of the company", "intensifying advertisement media to compete with bench-mark products in the market", etc. The first noun in the sentence should be an action noun or noun form of an action verb (making/looking/taking/overcoming/acquisition/reducing etc). It should refer directly to the state of affairs to be achieved/accomplished by the action of the decision-maker.

- **Positively phrased sentence:** This is another quality for identifying (A). For instance, a company is suffering losses and one way of stopping further loss is to close down that unit of the company which is suffering losses. Hence the major objective is not "to close down the unit not making profit" but to "stop the losses being incurred by the company". The latter is a positive expression.

There can be many (A)s in the passage as the decision-maker may have many other objectives of importance to him. They together help him to achieve the goals of the company.

(B) **Major Factor:** Referred to as (B) this is a factor which directly influences the decision and hence has a bearing on the achievement of the major objectives (A). In solving a particular problem a decision-

maker will have various alternative courses of action open to him. Major factor is that factor which directly influences the selection of a particular course of action by the decision-maker out of the alternatives available. Therefore, it is the major factor which plays a very important role at the time of the evaluation of the alternatives.

Major factors could essentially be of two types. First, those that are not in the control of the decision-maker, e.g., competitors retaliation to any move made by the decision-maker, government policies, general trends in the economy, behaviour of the consumers, etc. Second, those that relate to certain strengths and weaknesses of the company itself. If a company has certain weaknesses, then some alternatives may be rendered useless because they require the company to overcome these weaknesses which may not be possible easily. Hence, it has directly influenced the choice of alternative. The same argument applies for strengths because an alternative which utilises this strength would be better off in that respect as compared to others. The second category includes the strong preferences of the decision-maker which influence the final decision.

It should be noted that out of all those examples given above only those would be major factors which directly influence the decision-making.

(C) **Minor Factor:** Referred to as (C) this category includes those factors which are of less importance as compared to the major factors. Generally, they have a bearing on a major factor and through that they influence the decision and the attainment of (A). They do not have a direct influence on the evaluation of the alternatives. Even if they have a direct influence it will not be very significant for the decision itself.

(D) **Major Assumption:** Referred to as

(D) this is a feeling, idea, opinion or belief of the decision-maker which may or may not come true. It is the subjective opinion or belief of the decision-maker which has yet to be substantiated. But for an assumption to be classified as (D), it should have a direct influence on the decision. It should be an assumption on the basis of which the evaluation of the alternatives is carried out.

Some of the key words that help in identifying assumption are: probably, most probably, likelihood, presumption, assume, maybe and belief. However, these words only help us in identifying an 'assumption' and not the 'major assumptions'. To distinguish the latter from the former, it is necessary to see how important a bearing it has on the decision (or the evaluation).

(E) **Unimportant Issue:** The statement which lacks any significant impact or relationship to the decision is an unimportant issue.

It has no relevance or influence on the final goal or objective. However, it is present and an analytical mind can easily eliminate it from decision-making.

The classifications (A), (B), (C), (D), and (E) are all a part of the decision-making process, which can be understood easily from the following explanation:

Decision-making

This involves problem identification, problem solving and the decision:
1. What is the situation? 2. What is the desired change in the situation? 3. What factors influence the situation? 4. What courses of action (alternatives) are possible? 5. Which of the alternatives is the best and why? 6. What are the possible negative consequences of the best alternatives? 7. Decision.

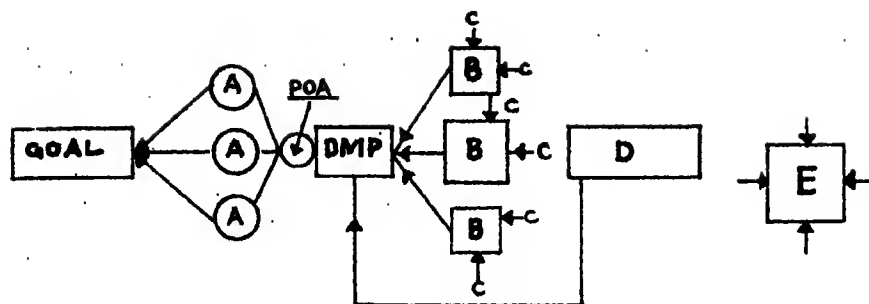

Comparison of Classification Answer Scheme & Identification on Differentiation Technique

(A) Major Objective	(B) Major Factor	(C) Minor Factor	(D) Major Assumption	(E) Unimportant Issue
That is the goal which the decision maker has to achieve It is something which the decision-maker desires.	This is the main factor influencing the decision. It is a consideration that is explicitly mentioned in the passage.	It is a secondary factor. It affects the decision-maker. It indirectly influences the final decision.	It is the decision-maker's personal feeling or assumption. It is something that the decision-maker takes for granted or assumes to be true.	It has no relevance to the decision.
It may be possible that the decision-maker may want to achieve several goals and therefore there may be several (A)s.		It is either a subset of the major factor or it is a factor which is unimportant as compared to the major factor	However, it is an important assumption because it influences the final decision.	

For ease of understanding, note the diagram on page 45 which describes the

answer scheme and the inter-relationship of the various factors:

* DMP—Decision Making Process (Evaluation of alternatives). A—Major Objective; B—Major Factor; C—Minor Factor; D—

Major Assumption, E—Unimportant Issue; POA—Plan of Action.)

DATA APPLICATION TESTS

The second set of questions relating to Business Judgment Situation based on Data Application (DA). These are straight forward, multiple-choice questions relating to the information contained in the passages discussed under the Data Evaluation section. If the Business Judgment passage contains tables/charts, there may be questions pertaining to the same. There may be some computation questions as well requiring quick oral

calculations. The following hints should prove useful:

1. Be on the look-out for specific and relevant information appearing in the passage.
2. Make sure that your answers are based on the information provided in the passage. No outside information has to be used to answer these questions. You have to find the answer from the passage only.
3. Read instructions preceding each question. All questions may not be of the same type.

DATA INTERPRETATION TESTS

Statistical data is presented through tables and diagrams (graphs). The object of these two techniques of data presentation is to project the quantitative information in such a form that it may appear interesting and becomes easily comparable. In CAT as well as in other competitive exams, there is a section on Data Interpretation. In order to tackle this section successfully one should familiarise oneself with the various forms of questions that are asked and the various types of tables and diagrams (graphs) commonly given in the exams.

Types Of Question

1. **Comparison of data:** The maximum and minimum figures are compared from the information given in the table/graphs.
2. **Average calculation:** Calculation of averages based on the information contained in the tables/graphs.

Fig. 3 Showing monthly manufacturing of products (Biscuits & Breads) in Tonnes

Fig. 4 Showing monthly production of biscuits and breads in tonnes

(Fig. 5)

A = Packing cost
B = Transport cost
C = Labour cost
D = Raw material cost

(Fig. 6)

	Jan	Feb	Mar
Biscuits	20	40	20
Breads	40	30	40
Total	60	70	60

(Fig. 2)

Practice Tests

In preparing these tests, we have tried to visualise the questions you are likely to face in your actual exam. Great care has been taken to frame questions which are of the same standard as those you'll encounter in your exam.

Rating : Evaluate your performance on the basis of the following score-card :

100 questions in 60 minutes – Excellent
60 questions in 60 minutes – Good
50 questions in 60 minutes – Fair
35 questions in 60 minutes – Poor

Tips : 1. Do not waste time over questions you are not sure about. 2. Give the problems some thought before choosing the answers. 3. Read the directions carefully before answering the questions. 4. Do not try to guess the answer.

Business Judgment Tests

FOR CAT

Having familiarised yourself with the last two sections of the Common Admission Test (CAT), get set to assess your business acumen under stress.

Time: 55 minutes.

Scores: 1. Give yourself one mark for each correct answer. 2. Deduct one mark for each wrong answer. Then rate yourself as follows: Excellent...39-44 Very Good...33-38 Good...27-32 Fair...21-26 Poor...Below 21.

DIRECTIONS: For each of the following questions, tick mark the choice that best answers the question. Answers are given at the end of these tests.

Passage No. I

Mr Shah, the young Marketing Manager of Excellent Product Group, was deeply lost in his thoughts. He was wondering what course of action, if any, he should take to maximise the gains out of the opportunity which he had suddenly chanced upon.

Excellent Product Group was a medium-sized company, dealing in consumer durables, with a turnover of about Rs 10 crores a year. Mr Shah had been associated with the company for the last five years, during which he had been able to increase the turnover from Rs 2 crores to the present level. It was a highly creditable performance.

That afternoon, Mr Shah had met Ramesh Vaidya, an old friend, successfully settled in the US. He was working at a very high level in the design department of a computer company reputed for turning out very high quality products which successfully compete with the products of giants like IBM and CDC in US market. His company was looking for a marketer in India who could sell the latest version of their model of personal computer, branded in the US as 'MINI-X'. Vaidya had told Mr Shah that if he wanted a contract could

easily be drawn up in favour of Excellent Product Group. The contract would give him the sole distributorship which could in later years be phased out gradually to a manufacturing licence (essentially assembly operation licence).

The offer was attractive. The personal computer market was a market with a potential of around 100 crores a year at present. Mr Shah felt that any company which had the advantage of entering early in this market could easily get and maintain a fairly large market share. If the growth in the industry was realised, with the increasing potential the profitability of the business would be very high.

The computer market was marked with a very high rate of technological obsolescence and therefore it was very important to have access to the latest technology on an ongoing basis. Quality and after sales service were other important elements. Quality seemed to be assured considering the reputation of the company in the US. However, Mr Shah thought that establishing a good after sales service network would be crucial. He was not sure how it could be done. Recruiting good quality computer personnel in India was a very difficult task. Training them in after sales

service, which involved maintenance of the operating system, would also be a difficult and costly proposition. Establishing permanent centres in some big metropolitan cities and industrial towns which were expected to provide a major proportion of the total sales, was also going to call for a large investment.

Creating awareness about different kinds of application areas for which a personal computer could be used would also involve a lot of investment in advertising.

Furthermore, the cost structure in the industry is changing very fast. Costs are falling with better technology, and this coupled with an increase in competition is now resulting in a fall in the price. There is a great deal of uncertainty about the way in which the present level of high per unit profits will change. This increases the risk associated with the investment. Uptil now the company has been dealing in stable mature markets where various factors influencing the business could be easily predicted. But the computer industry, on the other hand, is highly fluid. Mr Shah felt that the risk is even higher for Excellent Product Group because it does not have any manufacturing facility for electronic products. Even for simple assembly operations in the future, the initial investment is going to be high. Mr Shah was therefore looking for ways in which he could reduce the risk associated with the venture.

Since the market was new, he did not have a clear idea as to how the product should be priced and promoted. Should he price it very low and reap the benefits of large volume of sales? Or should he price it high enough in the beginning to skim the market? What kind of competition does he foresee in the market? Will it be focussed on price or quality? How should he promote the product? In Mr Shah's opinion, advertising with emphasis on providing a lot of useful information to the customer

should be a good promotion strategy. However, he was not confident. What if the customers did not respond well? He would be unnecessarily extending himself by investing heavily in advertising. The cash position of the company was already constrained because of the rapid growth which the company had maintained in the preceding five years. Availability of cash was crucial for entering the personal computer industry.

DATA EVALUATION

Directions : The statements given in this section relate to the preceding passage titled Business Judgment Test Passage No. 1. Based on your analysis of the situation narrated in the passage, evaluate (classify) each of the following conclusions in any of the five categories listed here:

- (A) **Major Objective :** If the sentence relates to one of the main goals sought by the decision-maker i. e., the outcome or result sought by the decision-maker, mark it (A).
- (B) **Major Factor :** If the sentence relates to a major factor in arriving at the decision, an important aspect of the problem and is basic in determining the decision, mark it (B).
- (C) **Minor Factor :** If the sentence has either a direct but minor influence on the decision or an indirect influence by affecting one of the major factors, mark it (C).
- (D) **Major Assumption :** If the sentence is a projection or supposition made by the decision-maker before weighing the variables, mark it (D).
- (E) **Unimportant Issue :** If the item has an insignificant impact or relationship to the decision, mark it (E).

Statements :

1. Capitalising on the opportunity of entering the personal computer industry.
2. Mr Shah's experience of five years in working with Excellent Product Group.
3. Vaidya's company's success in competing against computer giants like IBM and CDC in the US.
4. Changing cost structure due to technological advancement.
5. Amount of investment required in Advertising and providing after sales service to make the venture a success.
6. High rate of technological obsolescence in the industry.
7. Providing useful information to the customer in the advertisement would help in ensuring the success of the advertisement campaign.
8. Reduction in the risks associated with entering the computer industry.

9. Increasing competition in the personal computer industry in India.
10. Ensuring that this venture does not adversely affect the sales of the existing products of the company.
11. Falling prices of computers in the personal computer industry.
12. Capturing a market share at this early stage would ensure high profitability in the future.
13. Excellent Product Group's past experience only in stable mature markets.
14. Increase in the long-run profitability of Excellent Product Group.
15. Constrained cash position of Excellent Product Group.

DATA APPLICATION

Directions: Questions here pertain to the Business Judgment Test passage given earlier. Answer each of the following questions using information contained in the passage. The answer choice has to be based on the five possibilities given under each question:

1. The personal computer industry in India is characterised by
 - (i) International giants like IBM and CDC.
 - (ii) A high rate of technological obsolescence.
 - (iii) Potential for high growth in the future.
 - (iv) Decreasing price levels.
 - (a) II and III only
 - (b) II, III and IV only
 - (c) I, II and IV only
 - (d) I, III and IV only
 - (e) I, II, III and IV
2. The decision-maker is faced with the task of
 - (i) Deciding whether he should enter the personal computer industry.
 - (ii) Reducing the risk associated with entry into the industry.
 - (iii) Deciding how he should promote the product.
 - (a) I only
 - (b) II only
 - (c) I and II only
 - (d) I and III only
 - (e) I, II and III
3. The factors contributing to the high risk associated with entering the personal computer industry are
 - (i) High advertising expenditure needed.
 - (ii) Highly unstable profits.
 - (iii) Heavy expenditure on after sales service.
 - (a) II only
 - (b) I and II only
 - (c) II and III only
 - (d) I, II and III
4. The factors which contribute to making this opportunity attractive for the com-

pany are

- (i) Quick profits.
 - (ii) Growing market.
 - (iii) Availability of latest technology.
 - (iv) Early entry into the market.
- (a) I only
 - (b) I and III only
 - (c) II and III only
 - (d) I, II and IV only
 - (e) II, III and IV only

5. Reasons for decrease in the price of personal computers are
 - (i) Cheaper component availability.
 - (ii) Advancement in technology.
 - (iii) Increasing competition.
 - (iv) A change from sellers market to buyers market.

- (a) III only
- (b) II and IV only
- (c) II and III only
- (d) I, II and IV only
- (e) II, III and IV only

6. Some of the weaknesses of the company which are hindering it from entering the market are

- (i) Only five years of work experience of Mr Shah
- (ii) Constrained cash position.
- (iii) Lack of electronics manufacturing facility.
- (iv) Lack of electronics in such an industry.

- (a) II and III only
- (b) II and IV only
- (c) II, III and IV only
- (d) I, II and III only
- (e) I, II and IV only

7. The crucial elements of strategy in case Mr Shah decided to enter the industry would be

- (i) Pricing.
 - (ii) Promotion.
 - (iii) After sales service.
 - (iv) Quality.
- (a) I and II only
 - (b) I, II and III only
 - (c) II, III and IV only
 - (d) I, II and IV only
 - (e) I, II, III and IV

Passage No. II

To negotiate is always quite difficult. It is like a game of chess where you anticipate the moves of your rival in advance, build your strategies on it and then be prepared to respond effectively if your initial assumptions are wrong. There are many other factors also at work—the charisma of the negotiator's personality, his persuasive power, his understanding of the background.

Mr Aditya mused. His mind was struggling to come to grips with the situation which, as a negotiator, he found himself in. The negotiations were about to begin.

He had to prove to Mr Anderson, the representative of ACG (Auto Control

Group, a US-based large multinational), why his company CRG (Control Research Group, an Indian public limited company) was a better candidate for the transfer of technology, in the area of a high technology process control system for chemical industries, than any other company in India. CRG was a medium-sized company with an impressive growth record (around 15% p.a.) and had a good research and development base of its own. However, it was nothing in size compared to other giants in the field. Aditya was sure that at least two such big companies were in the fray to fight for this technology. What should he be willing to give to Mr Anderson? The issue of transfer of technology was intimately linked to the terms and conditions of payment that were going to be offered to ACG. What should these be? A still more important issue was the objectives he should set for himself in the negotiations. It was all still nebulous. What should he seek and under what circumstances?

The attractiveness of this technology lies in the fact that it is a comparatively new technology and is revolutionary in its novelty of approach. Any price which Mr Aditya offers would be closely linked to the estimate of profits that he expects from this venture. Such revolutionary ideas develop very dynamically and as time progresses many latent areas of application are discovered which can be profitably utilised. Therefore, Mr Aditya had to decide what potential could be realised from the new technology. Analytically, it is equivalent to finding out what will be the shape of the growth curve of this technology. Furthermore, he had to consider what kind of stimulus this technology could provide to his research and development base.

Mr Aditya also had to estimate the price Mr Anderson expected for this technology. This would be closely linked to Mr Anderson's perception of the kind of growth this technology's applications were capable of realising. This would also depend on the motive behind Mr Anderson's readiness to sell this technology to India. Were there other factors at work, such as a competitor who was developing a better process control system and could be expected to swamp the market with his idea? Mr Aditya also had to consider whether Mr Anderson knew the price's being quoted by the two competitors for this technology. Another important factor was to anticipate what Mr Anderson desired. Hard cash/immediate payment or a share in the long term profitability of the technology in India? Did he want a longer association with an Indian company to figure out what kind of needs existed in the Indian market? Was he therefore, looking

for a foothold in India to be able to sell other products and ideas to the Indian market in future? The Indian market due to recent liberalisation in import of technology was becoming highly attractive for companies like ACG.

So much depended also on Mr Anderson's personal biases, personality traits, preferences and value system. How should Mr Aditya receive him? Mr Aditya knew that striking a good relationship with Mr Anderson was of considerable importance. So how should he present himself? Should he be forthright and candid or the smart type who talks business all the time?

Time was short. There were only two hours scheduled for the first round of negotiations which was the most crucial time to make a positive impact. Mr Aditya had been working consistently for the past 10 hours since the morning. He had successfully resolved some of the issues but things were still quite nebulous. However, through his past experience he knew that his brain would become razor sharp in the presence of Mr Anderson and, as it happened very often, many of the decisions he had to take would come out of momentary, brilliant, intuitive insights he would be able to gain during the course of discussion. Negotiation is an art, he smiled to himself, and he knew he was very good at that.

DATA EVALUATION

Directions: Following statements have to be attempted in the same manner as was done for Passage No. I.

Statements

1. The price that is demanded by Mr Anderson for the technology that he is offering.
2. Striking a good bargain and getting the technology from Mr Anderson.
3. The possibility of finding new and profitable applications of the technology over time.
4. Mr Anderson's biases, personality traits, preferences and value system.
5. Mr Anderson's knowledge of the prices offered by the competitors.
6. CRG's growth record of 15% p.a. and a good research and development base of its own.
7. The existence of two more companies in the fray to fight for this technology.
8. Terms and conditions of payment offered by CRG to ACG.
9. A short time of only two hours for the negotiations.
10. The shape of the growth curve this technology will take.
11. The stimulus this technology is going to provide to CRG's research

and development base

12. Mr. Aditya's ability to get brilliant intuitive insights in the course of negotiation.
13. The charisma of the two negotiating personalities and their persuasive power and understanding of the background factors that are at work.
14. Mr Aditya's decision on the attitude he should adopt during the negotiations: candid and forthright or that of a person who is smart and talks business all the time.
15. Mr Aditya's estimate of the price Mr Anderson expected for the technology.
16. Striking a good relationship with Mr Anderson.
17. CRG is a public limited company.

DATA APPLICATION

Directions: Questions here pertain to the Business Judgment Test Passage No. II. Answer each of the following questions using information contained in the passage. The answer choice has to be based on the five possibilities given under each question:

1. The disadvantages faced by CRG vis-a-vis the other competitors for the technology are
 - (i) Its small size.
 - (ii) Its growth rate.
 - (iii) Its inability to pay a high price
 - (a) I only
 - (b) I and II only
 - (c) I and III only
 - (d) II and III only
 - (e) I, II and III
2. The strengths which CRG has which could stand it in good stead during the negotiations are:
 - (i) Its connection with the chemical industry
 - (ii) Its strong research and development base.
 - (iii) The good negotiation capabilities of Mr Aditya.
 - (a) II only
 - (b) III only
 - (c) I and II only
 - (d) I and III only
 - (e) II and III only
3. What made the technology attractive to CRG?
 - (i) New technology in India
 - (ii) Possibilities of having many other applications in the future.
 - (iii) Possibilities of stimulating its research and development.
 - (a) I only
 - (b) II only
 - (c) I and II only
 - (d) I and III only
 - (e) I, II and III
4. What are some of the qualities of a good negotiator?

- (i) Insight into opponents mind.
 (ii) Ability to persuade and convince.
 (iii) Aggressiveness
 (a) I and II only
 (b) I and III only
 (c) II and III only
 (d) I only
 (e) I, II and III
5. What was Mr Aditya confident about just before he went in for the negotiations?

- (i) His company's strength
 (ii) His momentary insights during the negotiations.
 (iii) His ability to negotiate.
 (a) II only
 (b) III only
 (c) I and III only
 (d) II and III only
 (e) I, II and III

E.T

Data Interpretation Tests

FOR CAT

And now the very last section of the Common Admission Test (CAT). Juggle with these data interpretation tests to orient your interpreting abilities under stress.

Time: 67 minutes.

Scores: 1. Give yourself one mark for each correct answer. 2. Deduct one mark for each wrong answer. Then rate yourself as follows: Excellent.....45-50 Very Good.....39-44 Good.....33-38 Fair.....27-32 Poor.....Below 27

DIRECTIONS: For each of the following questions, tick mark the choice that best answers the question. Answers are given at the end of these tests.

Graph showing cost of production of a firm

A = Raw material cost
 B = Packing material cost
 C = Fixed manufacturing expenses
 D = Labour cost

I Study the above graph and answer the following questions:

- What was the average annual growth rate between 1970-71 and 1975-76?
 (a) 10% (b) 30%
 (c) Zero (d) 20%
- Which year registered maximum growth rate?
 (a) 1983-84 (b) 1976-77
 (c) 1972-73 (d) 1982-83
- 1975-76 registered an output of 5.0 lakh tonnes and 1980-81 registered an output of 5.5 lakh tonnes. What was the growth rate in 1980-81 over 1975-76?
 (a) 10% (b) 1%
 (c) 2% (d) 9%
- Which year generated NIL growth?
 (a) 1970-71 (b) 1981-82
 (c) 1982-83 (d) None of the above
- What was the compounded annual

growth rate between 1982-83 and 1984-85?

- (a) 10% (b) 15%
 (c) 16.5% (d) 33.3%
6. If the growth rate in 1985-86 was the same as the growth rate in 1981-82 what would be the output in tonnes in 1985-86?
 (a) 8.67 lakhs (b) 8.72
 (c) 8.67 (d) 8.72 lakhs

II Study the above graph and answer the following questions.

- How many KWH were used in the first four months of the year under review in the graph?
 (a) 1,050 (b) 1,350
 (c) 1,250 (d) 1,200
- How many KWH had to be generated from own generators during the first four months under review to cover

the shortfall from supplies ex Electricity Board?

- (a) 1,350 (b) 250
 (c) 300 (d) 1,050

What was the total cost of power consumed between January-April?

- (a) Rs 675 (b) Rs 525
 (c) Rs 787 (d) Rs 750

How many KWH had to be generated ex own generators between January and August?

- (a) 750 (b) 700
 (c) 600 (d) 650

What is the average monthly cost of electricity used in this industry as per data given on the graph?

- (a) Rs 212.50 (b) Rs 271.80
 (c) Rs 228.12 (d) Rs 270.50

6 In which months was maximum power generation made from own sources of generation?

- (a) Aug/Sep (b) Jul/Aug
 (c) Oct/Nov (d) Sep/Oct

7. What was the difference between the total power actually used and the power which was received from the Electricity Board in the first six months of the year?

- (a) 300-KWH (b) 450 KWH
 (c) 350 KWH (d) 400 KWH

8. In the last six months of the year more power was consumed as per the curves shown in the graph. Calculate the percentage increase over the first six months utilisation.

- (a) 40% (b) 38%
 (c) 49% (d) 46%

III Study the above graph and answer the following questions:

- If the total values in rupees of all sectors is Rs 128.3 lakh, calculate the value of D in rupees?
 (a) Rs 0.6 lakh (b) Rs 0.6 lakh
 (c) Rs 0.006 (d) Rs 6.0 lakhs lakh
- Packing and raw material costs together represents --- of the total cost of production.
 (a) Rs 88.5 lakhs (b) Rs 111 lakhs
 (c) Rs 113.5 (d) None of the lakhs above

3. If the total cost of production is Rs 128.3 lakh, what is the share of packing material cost alone?
(a) Rs 58 lakhs (b) Rs 39.5 lakhs
(c) Rs 57.0 lakhs (d) 50.7 lakhs
4. If the total cost of production doubles in a period of one year, what will be the value of D?
(a) Rs 10.3 lakhs (b) Rs 1.3 lakhs
(c) Rs 0.13 lakh (d) Rs 13 lakhs
5. If there is an increase of four times in the cost of packing material (from original cost of Rs 50.7 lakhs) what will be the total cost of production?
(a) Rs 200.8 lakhs (b) Rs 278.4 lakhs
(c) Rs 274.8 lakhs (d) 250.0 lakhs
6. Total cost of production increases five times of Rs 128.3 lakhs, what will be the increase in percentage in labour cost?
(a) 57.6% (b) 400%
(c) 513.2% (d) 56.45%
7. If total cost of raw material becomes four times of Rs 62.8 lakh, calculate percentage increase?

- (a) 400% (b) 25%
(c) 300% (d) 250.4%
8. What is the increase in packing material in rupees if it increases by 2% and cost of total production remains Rs 128.3 lakh?
(a) 25.6 lakhs
(b) 2.56 lakhs
(c) 53.24 lakhs
(d) None of the above
9. If raw material cost increases by 20.4% and other costs remain at the same absolute levels, what would be the share of raw material cost in the resulting graph?
(a) 50% (b) 49%
(c) 53.7% (d) 53.1%
10. If the cost of total production increases to 147.5 lakh from 128.3 lakh due to increase in the fixed manufacturing expenses with other costs remaining at the same absolute levels it implies that the fixed manufacturing expenses have increased by
(a) 54% (b) 78.67%
(c) 136.3% (d) 103.25%

The graph shown above represents the variation of profitability* (profit earned per unit of sales) with sales volume for three competitors in a market.

IV Study the above graph and answer the following questions:

1. If all the three competitors have similar sales volume of Rs \times_1 lakh, which competitor is earning the maximum profit?
(a) A (b) B
(c) C (d) None of the above
2. Suppose company B's operating point is 125 lakhs. If additional cost to be incurred to increase the sales to 200 lakhs be 5 lakhs, the net profit earned would be:
(a) 4.12 lakhs (b) 1.21 lakhs

- (c) 6.0 lakhs (d) 3.75 lakhs
3. Suppose the total market size is 300 lakh and the market shares of A, B and C are 16.7%, 33.3% and 50% respectively. If C tries to gain 8.33% of the market share from A and compensates A for the loss that A makes, what profit will C be finally making.
(a) 1 lakh (b) 1.25 lakhs
(c) 3 lakhs (d) -1 lakh
4. If C tries to wrest the same market share from B, and compensates B exactly as he would compensate A, as per question 3, what profit does he make?

- (a) 4.1 lakhs (b) 6.0 lakhs
(c) -1 lakh (d) 3.28 lakhs
5. If due to a certain cost reduction programme, profitability of B at every point improves by 20% and C still tries to apply the same scheme as would be employed in question 4, what will his profits be?
(a) -0.9 lakh (b) 0.9 lakh
(c) -1.62 lakhs (d) 1.3 lakhs
6. In the present situation i.e. A, B and C having market shares of 16.7%, 33.3% and 50% respectively, what is the ratio of profits of A to profits of B, approximately. Assume the curved portion of B to be a straight line.
(a) 1 : 2 (b) 2 : 1
(c) 1 : 1 (d) 1 : 1.54

MENTAL ABILITY TESTS

DIRECTIONS: For each of the following questions tick mark the choice that best answers the questions. Answers are given at the end of the test.

1. If CYCLE = 6 and SCOOTER = 8, then DRIVER = ?
(a) 7 (b) 10
(c) 9
2. If Book = 10 and SHELVES = 14, then CUPBOARD = ?
(a) 12 (b) 14
(c) 18
3. If DOORS = 15 and WINDOWS = 19, then LOCKS = ?
(a) 15 (b) 14
(c) 13
4. If DATE = 30 and FADE = 16, then BAT = ?
(a) 25 (b) 23
(c) 28
5. If CLEVER = 60 and HONEST = 81, then BORE = ?
(a) 40 (b) 38
(c) 57
6. If CODE + VOTE = 89, then COAT + LOAD = ?
(a) 71 (b) 74
(c) 85
7. If HOTEL - FOOD = 20, then RESTAURANT = ?
(a) 137 (b) 80
(c) 52
8. If TALLOR - SHIRT = 9, then COOK + FOOD = ?
(a) 82 (b) 85
(c) 92
9. Insert the missing number:

CAGE	BEG	BIDE
+ FAD	- HID	- FADE
= 2227	= 563	= 7200
(a) 2	(b) 3	
(c) 5		
10. Which two letters come exactly in the middle of the English alphabetical order?
(a) NO (b) MN
(c) NM

11. If English alphabets are numbered in a backward sequence (i.e. Z = 1 and A = 26) what will be the number of letter "T"?
- (a) 20 (b) 6
(c) 7
12. What will be the number of letter "P" if "A" is allotted number "4"?
- (a) 17 (b) 16
(c) 19
13. If BLOCK is coded as "CMPDL", what will be the code for HOUR?
- (a) PUIS (b) IPUS
(c) IPVS
14. "GO AHEAD" is coded as "HPBIFBE". Code for "STOP NOW" is
- (a) PTOXUA (b) TUPOOPX
(c) TUPQOXP

Directions: Use the following set of figures to answer questions 15-18:

- 5 7 5 7 5 5 7 5 7 7 5 7 5 5 7 5 7 7
15. How many 5's are preceded by 5?
- (a) 2 (b) 3
(c) 4
16. How many 7's are followed by 5?
- (a) 6 (b) 5
(c) 4
17. How many 5's are followed by 7?
- (a) 6 (b) 7
(c) 5
18. Which figure comes exactly in the middle?
- (a) 5 (b) 7
(c) none
19. Insert the missing letter "E N S J ?"
- (a) T (b) K
(c) X
20. Insert the missing letter in "B C E J ?"
- (a) P (b) X
(c) Y

- (a) YEHOCK (b) YEOHCK
(c) EYOHCK (d) EYOHKC
(e) EYHOCK
12. Find the odd man out:
- (a) Falcon (b) Swan
(c) Vulture (d) Eagle
(e) Hawk
13. If two-third kg of sugar costs one-third of a rupee then how many kgs of sugar can be bought for two and one-third of a rupee?
- (a) $\frac{1}{56}$ (b) $\frac{7}{72}$
(c) $\frac{72}{7}$ (d) $\frac{56}{12}$
(e) None of the above
14. INTERRUPT: SPEAK is the same as
- (a) Shout: Yell (b) Intrude: Enter
(c) Interfere: Assist (d) Telephone: Telegraph
(e) Concede: Defend
15. If CRICKET is written as CTCREKI; then RUMANIA will be written as
- (a) ARAIUMN (b) RAAIUMN
(c) ARAIUMN (d) AARIUMN
(e) None of the above
16. If 'Tea is sweet' is written as 'sue cho rye'; 'Sita drinks tea' is written as 'cho ber kim'. 'Sita is sweet girl' is written as 'rye kim sue bis' and 'Tea is hot' is written as 'sue kora cho'; then which word means girl.
- (a) kim (b) ber
(c) cho (d) bis
(e) rye
17. How many statements in the above question are not required to answer it?
- (a) One (b) Two
(c) Three (d) None of the above
(e) Cannot be answered
18. Ramee is going in the direction of the setting sun. On the way she finds a yellow building on her left and after some distance a green building on her right. The yellow building is to the — of the green building.
- (a) South (b) East
(c) South east (d) South-west
(e) West
19. If sea is called mountain, mountain is called river, river is called sky and sky is called planet, then sea will be known as
- (a) Sea (b) Mountain
(c) River (d) Sky
(e) Planet
20. If 'A' means multiplication; 'B' means summation 'C' means division and 'D' means subtraction then 150 can be written as
- (a) (15 D 3) A 12 B 6
(b) (15 B 3) A B B 6
(c) (15 C 3) A 30
(d) All of the above
(e) None of the above
21. SCHOOL: DISCIPLINE is the same

Test Of Reasoning

By P. R. SAXENA

FOR POs & CAT...

This selection of questions on verbal reasoning is designed to help you in the forthcoming Bank PO and IIM CAT exams. Attempt the questions in order to assess your performance and further eliminate your weak spots, if any.

Scores: 1. Give yourself one mark for each correct answer. 2. Deduct one mark for each wrong answer.

DIRECTIONS: For each of the following questions, tick mark the choice that best answers the question. Answers are given at the end of these tests.

1. What is the ninth letter on the left of the ninth letter starting from the end of the alphabetic series?
- (a) Z (b) A
(c) J (d) I
(e) H
2. Find the odd man out:
- (a) Cricket (b) Hockey
(c) Football (d) Volleyball
(e) Tennis

Directions: In questions 3-7 certain names have been given but their spellings have got jumbled up. Indicate the correct answers from the given options.

3. Name of an emperor
- (a) YRGBU (b) MHREMO-TRETE
(c) YILECCB (d) YLAIRBR
(e) PNDENALA
4. Name of a game
- (a) ULACIEBNPR (b) PNOENALE
(c) YILECCB (d) ELNBIR
(e) YRGBU
5. Name of a political party
- (a) MHREMO-TRETE (b) YILECCB
(c) YLAIRBR (d) ULACIEBNPR
(e) ELNBIR
6. Name of an instrument used by

doctors

- (a) ELNBIR (b) YLAIRBR
(c) YILECCB (d) MHREMO-TRETE
(e) PNOENALE
7. Name of a vehicle
- (a) ELNBIR (b) YRGBU
(c) PNOENALE (d) YLAIRBR
(e) YILECCB
8. If MASTER is written as PCVVHY, then PHILIP will be written as
- (a) SJLOLS (b) SJKOLS
(c) SJKNLS (d) SJLNLR
(e) SJLNLS
9. If \rightarrow means multiplication, \leftarrow means summation, $-$ means division, \times means subtraction and $+$ means equal to, then
- $\{[(257 \times 245) \leftarrow 288] \times 295\}^2 + ?$
- (a) 33,295 (b) 125
(c) 7,83,225 (d) 25
(e) None of the above
10. Complete the series
- g-i-kk-m-oo—
- (a) g j l m p p (b) g k m n p p q
(c) h j l m p q (d) h j m n p q
(e) None of the above
11. If BILLIARD is written as RDIBIALL, then HOCKEY will be written as

- as
- (a) Pupil: Dean (b) Report card: Marks
- (c) Society: Conformity (d) Underworld: Gangster
- (e) Hospital: Cleanliness
22. There are five girls Monalisa, Mona, Mohini, Monika and Madhu. Mohini is younger to Monalisa, Monika is elder to Mona, Madhu is younger to Mohini, Monalisa is younger to Mona and Monalisa is younger to Monika. Who is the eldest?
- (a) Monalisa (b) Mona
(c) Mohini (d) Monika
(e) Madhu
23. In the above question how many statements are not required to answer it?
- (a) One (b) Two
(c) Three (d) None of them
(e) All of them
24. If $4 \times 6 = 42$
 $5 \times 7 = 63$
then $6 \times 8 = ?$
- (a) 84 (b) 108
(c) 86 (d) 88
(e) None of the above
25. My grandfather had one son, one brother who never married and seven sisters. My father's uncle's sister's brother's son is my
- (a) Son (b) Father
(c) Grandfather (d) Cousin
(e) Brother
26. Five friends are sitting in a circle I Raja is directly opposite to Sita
If Mohan is in the exact middle of Raja and Gopal.
If Rita is directly opposite to Mohan.
This means Rita is sitting between
- (a) Raja and Mohan
(b) Mohan and Gopal
(c) Gopal and Sita
(d) Sita and Raja
(e) Raja and Gopal
27. Kashmir is in the north of India. Assam is in the north-east of India. Kashmir is to the — of Assam.
- (a) North (b) East
(c) North-east (d) South-east
(e) West
28. The son of the wife of the brother of the sister of my mother is my
- (a) Brother (b) Uncle
(c) Father (d) Cousin
(e) None of the above.
29. FALL: PAIN is the same as
- (a) Flying: Walking
(b) Food: Calories
(c) Disobedience: Punishment
(d) Laugh: Cry
(e) Swim: Enjoy
30. If BATRA is written as BCBSU then MAJESTIC will be written as
- (a) DLHBURIF (b) MAGFTUJD
(c) DLHBRUIF (d) DLHBUIRF
(e) DNJBUKTF

ANSWERS

Business Judgment Tests

Passage I

Data Evaluation

1. (a) This has been explicitly stated as an objective of Mr Shah in the first paragraph of the passage.
2. (e) This has just been mentioned in the passage. But his having worked in the company for the last five years does not in any way affect the decision.
3. (c) The fact that Vaidya's company has successfully competed against IBM and CDC implies that it is technologically strong which is a major requirement for success in India. Since it indirectly influences the decision by assuring good quality it is a minor factor.
4. (b) Technological advancement has reduced cost which directly influences profitability which is one of the objectives and hence it is a major factor.
5. (b) Since the amount of investment is heavy it directly influences the decision.
6. (b) This makes it necessary to have a continuous source of supply of up-to-date technology and is hence a major factor.
7. (e) This is an assumption but it is irrelevant to the decision at hand. Deciding on the advertisement campaign would come only after deciding whether the company should enter this industry in the first place.
8. (a) This has been explicitly stated in the last line of the seventh paragraph.
9. (c) This indirectly influences profitability by leading to a reduction in price (which is a major factor) and hence it is a minor factor.
10. (e) This could be an objective but there is no mention of it in the passage. We cannot assume anything beyond what is given in the passage.
11. (b) This directly affects the profits that can be realised and hence it is a major factor.
12. (d) This is an assumption or expectation of Mr Shah and may not actually happen. Since it directly leads to the achievement of long-term profitability, it's a major assumption.
13. (c) Since the company has not ventured into fluid markets like the computer market it may not be that confident and hence this does have a direct influence on the decision. But the influence is very weak, hence this is a

minor factor.

14. (a) In the fourth paragraph it is clear that Mr Shah is finding the industry attractive because of its high potential for profits in the future.
15. (b) At the end of the passage it has been clearly stated that availability of cash was crucial for entering this industry.

Data Application

1. (b) 2. (c) 3. (d) 4. (e) 5. (d) 6. (c)
7. (e)

Passage II

Data Evaluation

1. (b) 2. (a) 3. (d) 4. (c) 5. (c) 6. (c)
7. (c) 8. (b) 9. (e) 10. (c) 11. (c) 12. (c)
13. (b) 14. (c) 15. (c) 16. (d) 17. (e)

Explanation: Given below is a broad framework of analysis, the understanding of which will enable you to understand the individual answers.

In a negotiation such as this both the negotiators come with some price in their mind. Mr Anderson will have decided that he must get a minimum of various things in the deal. Mr Aditya on the other hand will have decided the upper limit that he can go to in terms of the price he is willing to pay for the technology. The exact nature of this maximum and minimum limits would be the major factors that would influence the negotiation.

But once the negotiation starts, then the exact price that is decided upon (or not decided upon) would depend upon the negotiation abilities of each of the negotiators (Statement No. 13), which would again be a major factor.

All the factors which go to influence the above two major factors would be the minor factors. For example, statement nos. 5, 6, 7, 10, 11 and 15 all influence the former set of major factors and are hence minor factors. Whereas statement nos. 12 and 14 influence the latter set of major factors and hence are also minor factors.

In this passage the distinction between the major and minor factors is of crucial importance. The major objectives, major assumptions and unimportant issues are not difficult to determine because there are explicit statements in the passage which help in their identification. Hence, these need not be explained.

Data Application

1. (a) 2. (e) 3. (e) 4. (a) 5. (d)

Data Interpretation Tests

I. 1. (b) 2. (c) 3. (a) 4. (c) 5. (b) 6. (d)

II 1. (b) $400 + 350 + 300 + 300 = 1,350$ represents total power used which includes both outside supplies (ex Electricity Board) and own generation.

2. (c) Power used - power received ex Electricity Board = own generation (to meet the shortfall). Hence $1,350 - 1,050 = 300$.

3. (d) Total power used = 1,350 KWH
Total power received ex Electricity Board = 1,050
Own generation = $1,350 - 1,050 = 300$ KWH
Cost of outside power $1,050 \times \text{Rs } 0.50 = 525$ (a)
Cost of own generation $300 \times \text{Rs } 0.75 = 225$ (b)
Total cost of power used = a + b i.e. $525 + 225 = \text{Rs } 750$

4. (c) Power used January/August = 3,100 KWH (a)
Power available ex Electricity Board during the above period = 2,500 KWH (b) Own generation to make up shortfall = $a - b = 3,100 - 2,500 = 600$
In May 50 KWH was surplus and used in June. Hence 100 KWH to be reduced from the difference between power actually used and the power which was available ex Electricity Board.

5. (c) Total power used = 5,100 KWH, out of this 4,350 KWH was supplied by Electricity Board @ Rs 0.50/KWH = Rs 2,175.
The shortfall of 750 KWH ($5,100 - 4,350 = 750$) was made up by own generation @ Rs 0.75/KWH = Rs 562.50
Hence Rs 2,175 + Rs 562.50 = Rs $\frac{2,737.50}{12}$

Rs 228.125/month avg.

6. (b) Only in July/August 150 units each were less received than demand, necessitating more own generation to meet the shortfall.

7. (a) Total power used in the first six months = 2,050 KWH
Total power received ex Electricity Board during the above period = 1,750 KWH
Difference ... 300 KWH

8. (c) Total power consumed in the last six months = 3,050 KWH. Total power consumed in the first six months = 2,050 KWH
Therefore % increase = $\frac{3,050 - 2,050}{2,050} \times 100 = 49\%$

III 1. (c) There must be a total of 100% in a circle graph. The sum of other sectors is $49\% + 39.5\% + 11\% = 99.5\%$.
Therefore D = $100\% - 99.5\% = 0.5\%$

1. (b) 0.5% of Rs 128.3 lakhs = Rs 0.6 lakh

2. (c) Packing material = 39.5% of Rs $\frac{128.3 \times 39.5}{100} = 50.7$

Raw material = 49% of Rs $\frac{128.3 \times 49}{100} = 62.6$

$50.7 \text{ lakhs} + 62.6 \text{ lakhs} = 113.6$

3. (d) Packing material represents 39.5% of the total cost of production. Hence 39.5% of Rs 128.3 = 50.7 lakhs

4. (b) Doubling a sum implies $\times 2$. D represents 0.5% of the total cost of production. Hence 0.5% of Rs 256.6 = $\frac{256.6 \times 0.5}{100} = 1.28$ or say 1.3%

*Double cost (Rs $128.3 \times 2 = 256.6$)

5. (b) Four times increase = $\times 4$. Hence Rs $50.7 \times 4 = \text{Rs } 202.8$. Therefore total cost of production = $(128.3 - 50.7) + 202.8 = 278.4$

6. (b) Five times increase 400% increase. (100 is already included in it which has not to be added.)

7. (c) Four times increase implies 300%

8. (d) Actual increase is of 2%. Total cost of production is Rs 128.3 lakhs out of which total cost of packing material is 39.5% which works out to Rs 50.7 lakhs. 2% increase on packing material cost is = 1.01 lakhs

9. (c) When the raw material costs increase by 20.4%, the total cost of production increases by $\frac{49 \times 20.4 \times 100}{100 \times 100}$

= 10%. Therefore, the changed % share of raw material cost should be = $\frac{49 + 10}{100 + 10} = 53.7\%$

10. (c) % increase in total cost = $\frac{147.5 - 128.3}{128.3} \times 100$
= 15%

This increase comes from an increase in fixed manufacturing expenses. Therefore the % increase in fixed manufacturing expenses = $\frac{15 \times 100}{11} = 136.3\%$

IV 1. (a) The areas under the three curves from origin to X_1 , give the profit figures for the respective competitors. Obviously till X_1 , the area under curve A is the maximum.

2. (c) The total area under the curve B for this range, 125 -- 200 lakhs = 8 cells = $8 \times 0.05 \times 25 = 10$ lakhs = additional profit gains. Hence the net profit realised = $10 - 5 = 5$ lakhs.

3. (b) These market shares imply sales of 50, 100, 150 lakhs for A, B, C. 8.33% market share would mean a movement of 25 lakhs or equivalently one cell of the graph. Increase in sales by 25 lakhs for C would mean a profit figure = area under the curve C from 150 to 175 = $5\frac{1}{2}$ cells. Similarly decline in sales by an equivalent amount for A would mean a loss = $4\frac{1}{2}$ cells. If C compensates A for this loss, the net gain for C = $5\frac{1}{2} - 4\frac{1}{2} = 1$ cell = $0.05 \times 25 = 1.25$ lakhs.

4. (d) Similar to question 3 (C's gain = $5\frac{1}{2}$; B's loss = $2\frac{1}{2}$. Difference = 2.625 cells = 3.26 lakhs.)

5. (c) B's loss in this case would increase by four cells = $4 \times 1.25 = 5$ lakhs. (4 cells = 20% in height on the graph). If C compensates B for his losses, C's net loss = $3.28 - 5 = -1.62$ lakhs.

6. (c) Compose the areas under A, B at 50 lakhs and 100 lakhs sales respectively.

Mental Ability Tests

1. (a) Count number of letters in each word and add one to get the number.

2. (c) Count number of letters in each word and double it, then add 2 to get the number.

3. (a) Count number of letters in each word and double the sum. Add 5 to get the answer.

4. (b) Give the letters their number in alphabet. Add them up to get the answer.

5. (a) -do-

6. (a) Give letters their serial number in the alphabet and add them up.

7. (a) -do-

8. (a) Give letters their serial number in alphabet.

Add them up. Then calculate based on + or - sign.

9. (a) Letters stand for numbers. A = 4, B = 9, C = 1, D = 5, E = 2, F = 7, G = 8, H = 3, I = 6, etc.

10. (b) 11. (c) 12. (c) 13. (c) 14. (b) 15. (b)

16. (a) 17. (b) 18. (b)

19. (c) Take the number corresponding to those letters in the inverted alphabet, i.e. 22, 13, 8, 5. Each is derived from the preceding one by adding 4, 3, 2 and then 1 and halving ($22 + 4 = 26$; $26 + 2 = 13$; $13 + 1 = 6$; $6 + 2 = 3$). The third letter in the inverted alphabet is "X"

20. (b)

Test of Reasoning

1. (d) Ninth letter on the left of the ninth letter from the end means eighteenth letter from the end, or ninth letter from the beginning i.e. I.
2. (e) Cricket, hockey, football and volleyball are team games while tennis is played by two or four individuals.
3. (e) PNOENALA: NAPOLEAN: Name of an emperor
4. (e) YRGBU: RUGBY: Name of a game
5. (d) ULACIEBNPR: REPUBLICAN: Name of a political party
6. (d) MHREMOTIRETE: THERMOMETER: An instrument used by doctors
7. (e) YILECCB: BICYCLE: Name of a vehicle
The other two words used are
YLAIRBR: LIBRARY
ELNBIR: BERLIN
8. (d) MASTER is written as PCVVHT
The code is that the first, third and fifth letters are replaced by the third alphabet on their right in the alphabetic series, while the second, fourth and sixth letter are replaced by the second alphabet on their right in the alphabetic series. This can be understood in the following manner
A, B, C, ..., M, N, O, P, Q, ..., X, Y, Z
As can be seen, P is the third alphabet on the right of M, while C is the second alphabet on the right of A.
Similarly
S, T, U, V so S is replaced by V
T, U, V so T is replaced by V
E, F, G, H so E is replaced by H
R, S, T so R is replaced by T
Following the same procedure for the word PHILIP
P, Q, R, S P would be replaced by S
H, I, J H would be replaced by J
I, J, K, L I would be replaced by L
L, M, N L would be replaced by N
I, J, K, L I would be replaced by L
P, Q, R P would be replaced by R
Hence PHILIP would be written as SJLNLR
9. (d) $\{(257 \times 245) \div 4.288\} \times 295\}^2 + ?$
is actually
 $\{[(257 - 245) + 288] - 295\}^2$
 $= \{[12 + 288] - 295\}^2 = (5)^2 = 25$
10. (d) The series is of the following form
ghi ijk klm mno opq
11. (c) The word BILLIARD can be divided into four parts.

BI	LI	IA	RD
1	2	3	4

This has been rewritten as

RD	IB	IA	LI
4	1	3	2

Similarly hockey can be divided as

HO	CK	EY
1	2	3

It would be coded as

EY	OH	CK
3	1	2

or EYOHCK
12. (b) All others are hunting and flesh-eating birds.
13. (d) $\frac{1}{3}$ rd of a rupee can get sugar = $\frac{2}{3}$ kg
One rupee can get sugar = $\frac{2}{3} \times 3 = 2$ kg
 $2\frac{1}{3}$ rupee ($\frac{7}{3}$ rupees) can get sugar = $\frac{2}{3} \times \frac{7}{3} = \frac{14}{9}$ kg
 $\frac{14}{9}$ is the same as $\frac{56}{12}$
14. (c) Interrupt means not to let someone speak. Hence it is opposite to speak. 'C' is the only pair having the two opposite

meaning words.

15. (d) CRICKET can be divided into its constituent letters as follows

C	R	I	C	K	E	T
-3	-2	-1	0	+1	+2	+3

It is written as

C	T	C	R	E	K	I
0	+3	-3	-2	+2	+1	-1

(i.e. starting from the middle letter then taking the letters from the extremes alternately)
Similarly RUMANIA can be divided as

R	U	M	A	N	I	A
-3	-2	-1	0	+1	+2	+3

This can be rearranged in the same manner as the word CRICKET was arranged i.e.

A	A	R	U	I	N	M
0	+3	-3	-2	+2	+1	-1
16. (d) We have to find the code for 'girl'. The only statement containing the word 'girl' is
'Sita is sweet girl', which is written as 'rye sue kim bis'.
If we can find the codes for 'Sita', 'is' and 'sweet' then the remaining word would be the code for 'girl'. So we consider the two statements containing 'is' i.e.
Sita is sweet girl : rye kim sue bis
Tea is hot : rye kora cho
We can see that the only word common on left hand side is 'is' while the common word on the right hand side is 'rye'. So 'is' is coded as 'rye'.
Now let us take the two statements containing 'Sita'
Sita is sweet girl : rye kim sue bis
Sita drinks tea : cho ber kim
Following the above logic 'Sita' is coded as 'kim'. Now let us take the statements containing 'sweet'
Sita is sweet girl : rye kim sue bis
Tea is sweet : sue cho rye
From these statements we can infer that 'is sweet' is written as 'sue rye'. We have seen above that 'is' is coded as 'rye'. This means 'sweet' is coded as 'sue'.
In the statement
'Sita is sweet girl' : rye kim sue bis
we know that 'Sita is sweet' would be written as 'rye kim sue'. Hence 'girl' is coded as 'bis'
17. (a) The above question can be solved by using three statements only viz
(i) Tea is sweet : sue cho rye
(ii) Sita drinks tea : cho ber kim
(iii) Sita is sweet girl : rye kim sue bis
From (i) and (iii) we can see that 'is sweet' is coded as 'rye sue'. From (ii) and (iii) 'Sita' is coded as 'kim'. Now we can easily infer in (iii) that 'girl' is coded as 'bis'
18. (c) The movement of Radha and the position of buildings is shown in the following diagram.
It is clear from the diagram that the yellow building is to the south-east of the green building.
19. (b)
20. (d) $(15 \div 3) \times 12 \div 6 \div (15 - 3) \times 12 + 6$
 $= 12 \times 12 \div 6 = 150$
 $(15 \div 3) \times 8 \div 6 \div (15 + 3) \times 8 + 6$
 $= 18 \times 8 \div 6 = 150$
 $(15 \div 3) \times 30 \div (15 + 3) \times 30 = 5 \times 30 = 150$
21. (c) In a school one has to follow the discipline, in a society one has to conform to its norms
22. (d) The statements in the question can be rewritten as
(i) Mohini is elder to Madhu
(ii) Monalisa is elder to Mohini
(iii) Mona is elder to Monalisa
(iv) Monika is elder to Mona
(v) Monika is elder to Monalisa

Starting from statement (iv) we can say that Monika is elder to Mona is elder to Monalisa is elder to Mohini is elder to Madhu.

Thus we see that Monika is the eldest.

23. (a) As we can see above statement (v) is not required to answer the question.
24. (d)
25. (b) My father's uncle is my grandfather's brother. His sister is my grandfather's sister also. Her brother is my grandfather. His son is my father. (Since my grandfather's brother never married so there is no question of his having a son).
26. (d) Raja is directly opposite to Sita can be shown as Mohan is in the exact middle of Raja and Gopal. So Gopal can be anywhere in the semi circle 1 or 2. The position of Mohan is between Raja and Gopal, i.e., Rita is directly opposite to Mohan, so her position can be shown as
Thus we see that the position of Rita is between Raja

and Sita in both cases.

27. (e)
28. (d) My mother's sister's brother is my mother's brother i.e. my maternal uncle. His wife is my maternal aunt. Her son is my cousin.
29. (c) Fall causes pain, similarly disobedience causes punishment and swimming causes enjoyment. But enjoyment is a positive feeling while punishment and pain both are negative feelings so the correct answer is (c).
30. (a) BATRA can be divided into five parts as

B A T R A
2 4 5 3 1

This is rewritten as

A B R A T
1 2 3 4 5

Now each letter is replaced by its next letter in the alphabetic series, so we get

B C S B U

Similarly MAJESTIC can be divided into eight parts as

M A J E S T I C
2 4 6 8 7 5 3 1

This should be rewritten as

C M I A T J S E
1 2 3 4 5 6 7 8

Now each letter is replaced by its next letter in the alphabetic series to give D N J B U K T F

Quantitative Aptitude

BY KAVITA KAPOOR & B.L. ARORA

FOR PO, CAT, NDA & CDS EXAMS

This section has been specially designed for those appearing for PO, CAT, NDA and CDS exams.

DIRECTIONS: Tick mark the choice that best answers each question. Answers with explanations appear at the end of this test.

- $\sqrt{8} + \sqrt{32} - \sqrt{50}$ is equal to
(a) 2 (b) $\sqrt{2}$
(c) $2\sqrt{2}$ (d) $\sqrt{-10}$
- $11\sqrt{-1}$ is equal to
(a) 1 (b) $\sqrt{-1}$
(c) -1 (d) None of the above
- If $4x^{0.5} + 20x^{0.25} + 25 = 0$, x will be
(a) 625/16 (b) 5/2
(c) 25/4 (d) 25/8
- The hypotenuse of a right-angle triangle is 8 cm long while the sum of the other two sides is 10 cm. The length of the longer side is
(a) 6 cm (b) $3 + \sqrt{5}$ cm
(c) $5 + \sqrt{7}$ cm (d) None of the above
- The sum of the first 150 positive integers is
(a) 11,325 (b) 22,590
(c) 10,675 (d) 16,540
- If the largest number from the

- digits 1, 3, 5, 6, 8, 0 and the smallest digit from these is added, the result will be more than their difference by
(a) 13,568 (b) 21,576
(c) 27,136 (d) 32,408
- If a number is subtracted from the square of its one-half, the result is 48. The square root of the number is
(a) 8 (b) 6
(c) 5 (d) 4
- What number must be added to the numerator and denominator of $3/4$ to give $11/12$?
(a) 5 (b) 6
(c) 7 (d) 8
- If the width of a rectangle is 2 m less than its length, and its perimeter is 32 m, the area of the rectangle is
(a) 224 m^2 (b) 108 m^2
(c) 99 m^2 (d) 63 m^2
- Four different bells ring at intervals of five, six, eight and 10 minutes respectively.

If they ring together at 4 p.m. they will next ring together at
(a) 5.30 p.m. (b) 6.00 p.m.
(c) 7.00 p.m. (d) 8.10 p.m.

- The smallest number which when divided by 6, 12 and 16 leaves 5 as remainder is
(a) 43 (b) 53
(c) 59 (d) 65
- The H.C.F. of the numbers 0.6, $6/25$ and $18/25$ is
(a) $3/25$ (b) $3/125$
(c) $18/25$ (d) $18/125$
- A company pays its employees twice their normal salary in June and December every year. The percentage of the annual salary the employees get in December is nearly
(a) 8.33 (b) 14.3
(c) 16.66 (d) 18.27
- For a sphere of radius 10 cm, the numerical value of its surface area is—of the numerical value of its volume.
(a) 22.66% (b) 26.5%
(c) 30% (d) 45%
- A student passes an examination if he passes both in Maths as well as English. If 40% students fail in English and 50% fail in Maths, 40% students pass. The percentage of students who fail in English as well as Maths is
(a) 10% (b) 30%
(c) 45% (d) None of the above

16.

If the inner square in the figure is symmetrically placed inside the outer square, the area of the figure DIHJ is
(a) 4 sq cm (b) 8 sq cm
(c) 12 sq cm (d) 16 sq cm.

17. A man sells two horses for Rs 3,600 each, neither losing nor gaining in the deal. If he sold one horse at a gain of 20%, the other horse is sold at a loss of
(a) 12.6% (b) 14.28%
(c) 17.5% (d) 20%
18. Rakesh sold a machine at a loss of 15%. Had he sold it for Rs 500 more, he would have lost only 5%. The cost price of the machine is
(a) Rs 2,500 (b) Rs 3,750
(c) Rs 5,000 (d) Rs 5,450
19. Naresh buys 100 shares of face value of Rs 10 per share at the rate of Rs 15 per share. If the company declares dividend @ 20%, the interest he earns on his investment is
(a) 13.33% (b) 14.75%
(c) 18.25% (d) 20%
20. A shopkeeper sells vegetables at a profit of 10% and uses weights which are 10% less than the marked weight. The total gain he earns will be nearly
(a) 19% (b) 20%
(c) 20.86% (d) 22.22%
21. A person spends 30% of his income on house rent, 10% on income-tax, 15% on children's income, saves Rs 200 every month, and spends the balance on food and household items. If his saving is 5% of his income, how much does he spend on food and household?
(a) Rs 1,600 (b) Rs 1,650
(c) Rs 1,800 (d) 1,920
22. A man deposited Rs 7,500 in a company for two years and Rs 10,000 in another company for four years. The total interest he got from the two companies at the same rate of interest is Rs 8,800. The rate percent was
(a) 12.5% (b) 14%
(c) 14.75% (d) 16%
23. The simple interest at $x\%$ for x years will be x on a sum of
(a) x (b) 100 x

(c) $\frac{100}{x}$

(d) $\frac{100}{x^2}$

24. A sum of Rs 12,000 deposited at compound interest becomes double after five years. After 20 years it will become
(a) Rs 1,92,000 (b) Rs 96,000
(c) Rs 76,000 (d) Rs 48,000
25. The difference in compound interest and simple interest for two years on a sum of money is Rs 160. If the simple interest for two years is Rs 2,880, the rate percent is
(a) 15% (b) 12.5%
(c) 11.11% (d) 9%
26. The number of lines formed by joining six non-collinear points is
(a) 12 (b) 18
(c) 15 (d) 30
27. The measure of a reflex angle is
(a) between 90° and 180°
(b) greater than 90°
(c) between 180° and 360°
(d) greater than 360°

28. If the radius of the circle shown is 8 cm, the length of the arc, AB is nearly
(a) 1 cm (b) 3.142 cm
(c) 4.728 cm (d) 6.284 cm
29. Given x is inversely proportional to y and $y=8$ when $x=4$. If x is equal to 16, y will be equal to
(a) 2 (b) 32
(c) 20 (d) None of the above
30. When $x=4$, $y=64$ also y is proportional to x^2 . Therefore when $y=32$, x will be equal to
(a) 2 (b) $\sqrt{2}$
(c) $2\sqrt{2}$ (d) 4
31. The average earning of a labourer for the first four days of a week is Rs 18 and for the last four days is Rs 22. If he earns Rs 21 on the fourth day, his average earning for the whole week is nearly
(a) Rs 18.95 (b) Rs 19.65
(c) Rs 19.85 (d) Rs 20.70
32. The average age of four players is 18.5 years. If the age of the coach is also included, the average age increases by 20%. The age of the coach is closest to
(a) 28 years (b) 31 years

(c) 34 years (d) 37 years

33. A salesman sells goods worth Rs 27,000 in September increasing his average monthly sale for nine months by Rs 400. His average monthly sale for the first eight months is
(a) Rs 26,600 (b) Rs 25,300
(c) Rs 24,200 (d) Rs 23,400
34. The average age of four children in a family is 12 years. If the spacing between their age is four years, the age of the youngest child is
(a) 6 years (b) 7 years
(c) 8 years (d) 9 years
35. If five men or nine women can do a piece of work in 19 days, three men and six women will do the same work in
(a) 10 days (b) 12 days
(c) 14 days (d) 15 days
36. Four men can do a piece of work in seven days while it takes two men and three women to finish the same work in seven days. In how many days will two men and two women finish it?
(a) 8.2 days (b) 8.4 days
(c) 8.8 days (d) 9.2 days
37. Three men and four boys do a piece of work in six days, while four men and four boys finish it in five days. Two men and four boys will finish it in
(a) 7 days (b) 7.2 days
(c) 7.5 days (d) 8 days
38. Ravi and Amzad invested Rs 7,000 and Rs 10,500 in a business. At the end of one year Ravi's share of profit was Rs 2,500. The total profit they earned was
(a) Rs 6,250 (b) Rs 5,750
(c) Rs 5,200 (d) Rs 3,750
39. Gurcharan Singh and Sundram start a business, their investments being in the ratio $1/3 : 2/5$. Sundram withdraws his money after 8 months. At the end of a year, they must divide the profit in the ratio
(a) 5:6 (b) 6:5
(c) 5:4 (d) 4:5
40. If 15 seconds: x hours = 3:40, x is equal to
(a) 3.33 (b) 1.18
(c) 0.18 (d) $1/18$

ANSWERS

1. (b) The given expression can be written as $2\sqrt{2} + 4\sqrt{2} - 5\sqrt{2} = \sqrt{2}$
2. (c)
3. (a) Let $x^{2+2} = y$. Then the given expression becomes $4y^2 + 20y + 25 = 0$, or $(2y+5)^2 = 0$. Thus, $y = -5/2$ or $x = 625/16$
4. (c) If a and b are the two other sides, then $a+b=10$ and $a^2+b^2=8^2=64$, where we have used the Pythagorus theorem. Solving these two equations, we get $a-b=2\sqrt{7}$. Since $a+b=10$, this gives $a=5+\sqrt{7}$.
5. (a) The sum of the first n natural number is given by $S = n(n+1)/2$. Putting $n=150$, we get $S = 150 \times 151/2 = 11,325$.
6. (c) If a is the largest number and b is the smallest number, $(a+b) - (a-b) = 2b = 2(13,568) = 27,136$.
7. (d) Let x be the given number. Then $x^2/4 - x = 48$, or $x^2 - 4x - 192 = 0$, which gives $x = 16$ or $\sqrt{x} = 4$.
8. (d) If y is the desired number, then we must have $\frac{3+y}{4+y} = 11/12$ or $36+12y = 44+11y$. Hence $y=8$.
9. (d) If L and W denote the length and width of the rectangle, $L-W=2$ and $2(L+W)=32$, i.e. $L+W=16$. Thus $L=9$ and $W=7$. Hence area $= 9 \times 7 \text{ m}^2 = 63 \text{ m}^2$.
10. (b) The bells would ring simultaneously at an interval which is the L.C.M. of 5, 6, 8 and 10. The L.C.M. of these numbers is 120. Thus they will toll together after 120 minutes or two hours.
11. (b) The L.C.M. of 6, 12 and 16 is 48. The required number is thus $48 + 5 = 53$.
12. (a) The given fractions can be written as $6/10$, $6/25$ and $18/25$. The H.C.F. of the given set of fractions = $\frac{\text{H.C.F. of numerator}}{\text{L.C.M. of denominator}} = \frac{6}{50} = \frac{3}{25}$.
13. (b) If the monthly salary is X , total annual salary $= 14X$. The percentage of salary paid in December $= \frac{2 \times X}{14X} \times 100 = 14.28\% = 14.3\%$.
14. (c) $\frac{\text{Area}}{\text{Volume}} \times 100 = \frac{4 \pi r^2}{\frac{4}{3} \pi r^3} \times 100 = \frac{3}{r} \times 100 = 30\%$.

15. (b) Given that 40% students pass or 60% of them fail. Representing the failed students with the help of a Venn diagram, it is obvious that 30% $(= (50+40-60)\%)$ of students fail in Maths, as well as English.

Thus 10% fall in English alone, 20% in Maths only and 30% in Maths, as well as English.

16. (d) Since the inner circle is placed symmetrically inside the outer circle, $DI = 4 \text{ cm} = JH$. Thus $DIHJ$ is a square of side 4 cm.
17. (b) Cost price of two horses = Rs 7,200, \therefore cost price of the horse sold at a gain of 20% = Rs $\frac{100}{120} \times 3,600 = \text{Rs } 3,000$.
Thus cost price of the other horse = Rs 7,200 - Rs 3,000 = Rs 4,200.
Loss % = $\frac{600}{4,200} \times 100 = 14.28\%$.
18. (c) Obviously Rs 500 is equal to 10% of the cost price of the machine. Thus, cost price = Rs 5,000.
19. (a) Money paid by him = Rs 1,500
Face value of shares = Rs 1,000
Dividend = 20% of Rs 1,000 = Rs 200
Interest % = $\frac{200}{1,500} \times 100 = 13.33\%$.
20. (d) If C is the C.P. of 1 kg he sells vegetables costing 0.9 C for 1.1C. Thus percentage profit = $\frac{0.2}{0.9} \times 100 = \frac{200}{9}\% = 22.22\%$.
21. (a) The amount he spends on food and household items is 40% of his income. Since 5% is Rs 200, 40% will be Rs 1,600.
22. (d) Rs 7,500 deposited for two years would fetch the same interest as Rs 15,000 for one year.
Similarly Rs 10,000 for four years = Rs 40,000 for one year.
Thus on Rs 55,000, Rs 8,800 interest will be due after one year at a rate $= \frac{8,800 \times 100}{55,000 \times 1} = 16\%$.
23. (c) Since $I = \frac{PRT}{100}$,
 $P = \frac{100 I}{RT} = \frac{100 \times}{\frac{1}{x} \cdot x} = \frac{100}{x}$.
24. (a) $A = P \left(1 + \frac{R}{100}\right)^n$
Raising both sides to fourth power,
 $\frac{A}{P} = 2^4 = \left(1 + \frac{R}{100}\right)^n$. Thus $A = 16P$
 $= \text{Rs } 1,92,000$
25. (c) The simple interest (as well as the compound interest) for the first year is Rs 1,440. The extra compound interest for the second is due to the simple interest on this amount for one year. Thus, rate per cent is $\frac{100 \times 160}{1440} = 11.11\%$.
26. (c) The required number is the number of combinations of 6 things taken 2 at a time i.e. ${}^6C_2 = \frac{6 \times 5}{1 \times 2} = 15$
Alternately, each point can be joined to

five other points giving five lines. Since this can be done with each of the six points, the total number of lines so formed is $5 \times 6 = 30$. But in this process of counting, each line is counted twice. The net number of lines is therefore, $30/2 = 15$.

27. (c)
28. (d) Length of arc AB is equal to $2\pi \cdot \frac{45^\circ}{360} = \frac{2\pi}{8} = 2\pi$.
29. (a) Since x is inversely proportional to y , $x \propto \frac{1}{y}$ or $xy = \text{const.}$ $k = 4 \times 8 = 32$.
Thus, when $x = 16$, $y = 2$.
30. (c) Since $y \propto x^2$, we can write $y = kx^2$. Thus $k = \frac{y}{x^2} = \frac{64}{16} = 4$. When $y = 32$, $x^2 = \frac{y}{k} = \frac{32}{4} = 8$ or $x = 2\sqrt{2}$.
31. (c) Sum of the income for the first four days and that of last four days is $(18 \times 4) + (22 \times 4) = \text{Rs } 160$. In this, the income for the fourth day (Rs 21) is counted twice. Thus, income for seven days is Rs $(160 - 21) = \text{Rs } 139$. Average income = $\text{Rs } 139/7 = \text{Rs } 19.85$.
32. (d) Total age of players = $18.5 \times 4 = 74$ years. Average age of players and coach = $18.5 + 20\%$ of $18.5 = 22.2$. Total age of players and coach = $22.2 \times 5 = 111.0$ years. \therefore age of coach = $(111 - 74)$ years = 37 years.
33. (d) Since the average increases in the ninth month by Rs 400, his sale in ninth month is Rs (400×9) more than the previous average sale. Thus, average sale for eight months is Rs $(27,000 - 3,600) = \text{Rs } 23,400$. Alternately, suppose the previous eight months average is x . Then $x + 400 = (8x + 27,000)/9 = \text{average for nine months}$.

Simplifying this, we get $x = 2,600$ or $x = \text{Rs } 23,400$.

34. (a) If x is the age of the youngest child, sum of their ages = $x + (x+4) + (x+8) + (x+12) = 4x + 24 = 12 \times 4$. Thus $4x = 24$ or $x = 6$.
35. (d) Since five men's work is equal to that of nine women, we can write $5m = 9w$ or $w = \frac{5}{9}m$. Thus 3 men and 6 women's work = $(3 + 6 \times \frac{5}{9})$ men's work = $\frac{13}{3}$ men's work. Since five men will do the work in 19 days, $\frac{13}{3}$ men will do it in $\frac{19 \times 5}{19/3}$ days = 15 days.
36. (b) One man's one day's job = $\frac{1}{12}$ and One woman's one day's job = $\frac{1}{18}$ ($\frac{1}{12} - \frac{1}{18}$) = $\frac{1}{36}$. \therefore Two men and two women's one day's job = $\frac{1}{12} + \frac{1}{18} = \frac{1}{9}$. Thus they will finish it in 8.4 days.
37. (c) Obviously one man's one day's job = $\frac{1}{12}$ - $\frac{1}{18} = \frac{1}{36}$. Thus two men and four boys' one day's job will be $\frac{1}{12} - \frac{1}{18} = \frac{1}{36} = \frac{1}{36}$. They will thus finish the job in $15/2$ or 7.5 days.
38. (a) Ravi's share: Total investment = Ravi's profit: Total profit or $7,000 : 17,500 = 2,500 : P$ or $P = \frac{17,500 \times 2,500}{7,000} = \text{Rs } 6,250$.
39. (c) Their investments are in the ratio $\frac{1}{5} : \frac{1}{6} = 6 : 5$.
Their monthly investments are in the ratio $(12 \times 5) : (8 \times 6) = 60 : 48 = 5 : 4$.
The profits should also be divided in this ratio.
40. (d) The given ratio is $\frac{15}{60 \times 60} \times \frac{1}{x} = \frac{3}{40}$
which gives $x = \frac{15 \times 40}{60 \times 60 \times 3} = \frac{1}{18}$

HOW TO TACKLE CAT-4

(Continued from page 45)

1. Line diagrams: In these graphs only one dimension - the length of the line is taken into account for the comparison of data. Only one item can be represented in a diagram (see Fig. 1).

2. Bar diagrams: The lines are made thicker in the form of bars. The breadth of all the bars is equal. The length varies according to the data represented by them. In these diagrams also one item can be represented (see Fig. 2).

3. Multiple bar diagrams: When more than one item is to be represented in a single graph, multiple bar diagrams are used (see Fig. 3).

4. Sub-divided bars: They also serve the purpose of multiple bars. In one bar two or more items can be represented. The bar is divided according to the number of items it represents (see Fig. 4).

5. Pie chart or circular diagrams: In this a sub-divided circle is used to repre-

sent the data. In pie charts, the degree of the angle for 1% will be $\frac{360}{100} = 3.6$.

The degree of the angle for each item can be determined by multiplying the given percentage with 3.6 (see Fig. 5).

6. Linear graph/curves: In this type of graph the data is shown through lines/curves. More than one item can be represented on the same graph by using different types of lines, e.g. dotted lines, single continuous lines, double lines, etc (see graph 6).

Hints

Note the following suggestions which will help you to solve the Data Interpretation section:

1. Have an over-all look at the graph and read the questions carefully. Make sure that you understand what you are being asked to do before you start computing.

2. Check the units (tonnes, kg, cases, number of persons, goods, etc). Ensure

that your answer is in hundred thousands, thousands, millions, lacs, etc whatever the question calls for.

3. Check the time unit. If the time unit of the variable under consideration is different from the time unit for the graph; then take care to adjust for the change suitably. Be sure that you are looking in the proper columns and on the proper lines for the information you need. Make use of a scale or a paper strip to read through the columns to avoid overlapping errors.

4. While working out percentages, make sure you find the base for comparison. Also remember that in order to convert a decimal into percentage, you must multiply it by 100, e.g. $0.06 = 6\%$. Distinguish between such quantities as 1%, 0.1%, 0.01% otherwise your calculations will go wrong.

5. In linear graphs, carefully note upward and downward trends and carefully compare them with the scale on the x and the y axis.

(Concluded)

NEWS CAPSULE

AWARDED

International Bar Association's Plaque of Honour to India's Chief Justice P.N. Bhagwati, for his dedicated efforts to promote an effective legal aid programme for the poor.

The gold medal for solidarity, instituted by the Afro-Asian People's Solidarity Organisation (AAPSO) to jailed South African black leader, Nelson Mandela.

Nobel Prize for peace (1985) to the International Physicians for the Prevention of Nuclear War, a politically independent group, informally known as doctors against nuclear war, for its "considerable service to mankind by spreading authoritative information and by creating an awareness of the catastrophic consequences of atomic warfare"; for Medicine to Americans Michael S. Brown and Joseph I. Goldstein "for their discoveries concerning the regulation of cholesterol metabolism"; for economics to Franco Modigliani of the Massachusetts Institute of Technology for "his analysis of savings and financial markets"; for Physics to Klaus von Klitzing of West Germany's Max Planck Institute for Solid State Research for his discovery of the quantised Hall effect, which has "opened up a new research field of great importance and relevance"; for Chemistry to Herbert A. Hauptman and Jerome Karle of the US for their achievements which have permitted the development of "practical instruments for determining the structure of molecules within both inorganic and organic chemistry—not least within Chemistry of natural products" for Literature to French avant-garde novelist Claude Simon for successfully combining "the poet's and the painter's creativeness with a deepened awareness of time in the depiction of human condition."

SCIENCE

Reye's syndrome and aspirin: US researchers have released data showing a link between Reye's syndrome, a rare disease that affects children, and the use of aspirin during flu or chicken pox. Reye's syndrome typically occurs four to seven days after a child has flu or chicken pox. Rather than recovering, the child begins to vomit and becomes delirious and, in severe cases, lapses into a coma. A study by a government task force has concluded that if a child develops the disease, there is a 93% chance that he or she received salicylates, an aspirin ingredient. Children who take aspirin are 16 times more likely to get Reye's syndrome, says the study. Expectedly, the multi-billion-dollar aspirin industry rose up in arms against the study which they called a "total mismanagement of data and information." The industry has, however, agreed to place labels urging that physicians be consulted before aspirin is given to children with flu or chicken pox.

Galaxy by chance: A team of US astronomers has discovered by chance what might be the most distant galaxy ever seen from earth. The galaxy is 14.5b light years

away—2.3b light years further than the previous-most remote sighting. According to Prof Byron Spinrad of the University of Berkeley, his team discovered the galaxy by accident as it was testing a new combination of light filters. But one more year of work will be necessary to determine more details.

EDUCATION

The three Es: The pursuit of the three Es—equity, excellence and efficiency—has been recommended by a UNESCO-sponsored symposium for improvements in higher education. The three Es are inter-related and one will not be achieved with the isolation of the other two. The symposium, held in New Delhi, recommended a larger allocation of funds for the development of higher education and greater efficiency in utilising resources, the establishment of a data base in every institution and called for a "deliberate attempt to establish linkages between socio-economic and cultural development policies and plans and higher education." The symposium, attended by countries from Asia and the Pacific, is seen as important by the Indian Government because it is expected to give valuable feedback to its document "the challenge of education," which is the basis of the new education policy.

HEALTH

Victims of alcohol abuse: The number of people who die yearly from alcohol abuse is several million more than the victims of starvation in the Sahel region of northern Africa, the World Health Organisation (WHO) says in a report on alcohol abuse. Alcohol is the main cause of many physical and mental illnesses, the report says. It expresses concern about rising alcohol production, which rose by 50% between 1965 and 1980. Two-thirds of alcohol is produced in Europe and north America. But alcohol consumption is mostly on the increase in the developing world.

The National Health Education Programme has failed to educate people about protection against diseases like tuberculosis, cholera and typhoid. This is the finding of a study sponsored by the Indian Council of Medical Research (ICMR). Lack of credibility of government health programmes and the non-availability of doctors at the primary health centres (PHC) have resulted in the failure of the health education programme and under-utilisation of health services at the grassroots level. The study recommends a ban on private practice by PHC doctors and suitable compensation to them and urges the government to ensure adequate supply of medicine and immunising agents.

NEIGHBOURS

Pakistan and Zia: General Zia has been confirmed as Pakistan's President for another five years; the National Assembly, which confirmed the appointment, also agreed to validate his tenure of the last eight years. This was done on Zia's unwritten promise that he would lift martial law by the end of 1985. The

assembly also pardoned Zia's 1977 coup and validated almost all the martial law orders he has issued since then. But all this came about only because of a compromise that limited Zia's powers to dissolve the Assembly and dropped the government's demand that the Assembly may approve without consideration a draft law providing for the restoration of political parties.

Prior to this, Zia's proposal to create a national security council was dropped. The proposed 11-member council comprising the President, the PM and the Chairman of the joint chiefs of staff was supported by the armed forces. It was to advise the government in times of emergency and national crises. The proposal was dropped when many members of the 237-member national assembly opposed it.

In the meanwhile, Pakistan and China are about to embark on a new trade relationship, envisaging double the present trade volume between them. Two-way trade is proposed to be increased to 500m annually from the present 200m and the two neighbours are likely to collaborate in the energy sector. These were among the results of a trip to Beijing by Pakistan's Finance Minister, Mahboobul Haq recently.

Murder is now punishable by death in Nepal. The Rashtriya Panchayat has passed an amendment to the Civil Code Bill, providing for death penalty for "gruesome and senseless" murders. The proceedings of the Panchayat were not without hitch; Sri Bhadra Sharma, a leading member contended that the Bill was different from the one he had proposed and demanded its withdrawal. When it was not withdrawn Sharma walked out. PM Lokendra Bahadur Chand told the house the laws of Nepal provided for the death penalty and "there is no effort made to introduce a new law in this connection."

Bangladesh's nuclear plans: Canada has offered to sell a 600m nuclear power reactor to Bangladesh and is ready to build the country's first nuclear plant. The 300Mw reactor, ostensibly meant to generate electricity will be installed in remote Rooppur area, 250 km from Dhaka. Canada's offer was made public by Bangladesh atomic energy commission's chairman, Anwar Hossain, on his return home from a foreign tour. His mission: to search for a nuclear reactor supplier and aid for the project. To build the plant, for which Canada has offered financial aid, too, is no overnight job. It will take at least seven years.

ECONOMY—National

Economists express concern: The country's leading economists are concerned at the recent trends in the government's economic policies which, they think, will lead to accentuation of inequalities and unemployment and aggravate the foreign exchange position. A conference held in Calcutta concluded on Oct 12 with a joint statement that expressed the concern and the fear that the policies would take the country away from the accepted

PEOPLE

In this day and age, when people and places are continually grabbing news headlines, no knowledge, inadequate without a comfortable familiarity with these 'big' names. Here's a month-by-month coverage. In this issue, we cover October.

W. Buckley American embassy political officer at Beirut was kidnapped and executed by gunmen of the Islamic Jihad terrorist organisation

C. Cheysson: The EEC commissioner agreed with Indian officials to set up an EEC-India joint economic commission, during his stay here

B. Craxi The socialist PM of Italy resigned, when the Republican party withdrew support to his coalition government in the wake of the Achilles Laura crisis

J.F. Dawkins: The Australian Trade Minister probed with Indian officials ways to expand and diversify bilateral trade relations during his recent New Delhi visit

L. Faluvegi: The Hungarian deputy PM during his recent tour of India signed a comprehensive programme for bilateral cooperation

Arkady Kotikov: Soviet diplomat at Beirut was seized and later gunned down by terrorists

R.P. Lubbers: The PM of Netherlands held talks with Rajiv Gandhi during the latter's halt at the Hague

W. Martens: Led the Centre-Right Coalition Christian People's Party to victory in the recent Belgian general elections

A. Mandic: Became the second man on earth to receive a synthetic heart when surgeons at the Hershey Medical Centre (US) implanted a Penn State Heart in him

V. Prabhakaran: Led an Eelam National Liberation Front (ENLF) delegation to India for talks with Indian officials led by Foreign Secretary Romesh Bhandari

T.A. Rithauddeen: The Foreign Minister of Malaysia discussed with Indian officials at New Delhi ways to strengthen bilateral ties and to peacefully defuse the explosive problems in South East Asia

Swaran Singh: Elected member of UNESCO's Executive Board the organisation's second most powerful body

F.D. Sommers: Head of the International Physicians for the Prevention of Nuclear war—the organisation which received this year's Nobel Prize for Peace

J.C. Whitehead: US Deputy Secretary of State discussed wide ranging bilateral and global issues with senior Indian officials during his recent stay at New Delhi

Wu Xueqian: Chinese Foreign Minister expressed hopes of an early settlement of the border issue with India following his talks with External Affairs Minister B.R. Bhagat

S.R.

national objective of growth with equality and self-reliance. The change in the Centre's economic policies is manifest in the relaxation of industrial licensing, raising MRTP limits, import-liberalisation, reduction in direct taxes on corporate and personal incomes and wealth

The economists' felt that the policies would together benefit only the rich. Organised by the West Bengal planning board, the 3-day conference was attended by 28 leading economists.

New high-level economic committee: A high-level inter-ministerial committee headed by Union Finance Secretary, S Venkatarmanan, has been set up to evolve a mechanism for implementing the recommendations of the Abid Hussain committee on trade policies and the Narasimhan committee on economic policy. The 10-member committee is also expected to evolve a machinery for rationalising the tax structure and the import licensing policy. The setting up of the new committee is seen by economy-watchers as indicative of the government's desire to shift as soon as possible from an era of quantitative restrictions on imports to one of financial controls as recommended by the Narasimhan committee.

Trade deficit doubled: The opening of the economy to imports has begun to be reflected in the country's trade deficit which has doubled in the first two years of the current financial year from the same period last year. According to Commerce Ministry data the trade deficit during April-May 1985 stood at Rs 1514.94 crores against Rs 779.52 crores during the same period in 1984. The imports at Rs 3083.17 crores were up by 39.1% and exports, at Rs 1568.23 crores by 9.1%. Unless exports go up substantially or imports are curbed during the rest of 1985-86, the year may end with a deficit of well over Rs 7000 crores against Rs 5187 crores last year. In tune with the larger imports, the country's foreign exchange reserves have also dwindled. During the first five months of the current financial year, the reserves declined by Rs 358 crores to Rs 6,459 crores.

Government expenditure, especially the non-plan expenditure is rising at a rate faster than the likely growth in revenue. This is despite the fact that revenue is likely to be much larger than estimated by the budget and profits of the public sector showing a rise, says the National Council for Applied Economic Research (NCAER) in its review of the economy. The review which covered the quarter April-June said the economy presented a mixed picture with a lower-than-targeted production of raw food, a slowdown in industrial output and decline in the foreign exchange reserves. The price rise was lower than in the corresponding quarters of 1983 and 1984 and exports improved. The council said the decline in food production was minimal but added that the 160m tonnes target for 1985-86 'appeared ambitious'. Infrastructure industries showed a fair aggregate growth rate but their impact on overall industrial growth was negligible, it said.

ECONOMY—International

Deep depression seen? Commonwealth ministers of finance have warned of 'deep depression' in the world economy because of the increasing protectionist pressures and the trend towards bilateralism. The warning is contained in a communique issued at the end of a two-day meeting of the ministers in Male,

PLACES

Angola: More than 50 people were killed here when South African fighter planes strafed its south eastern regions.

Alexandria: Palestinian guerrillas hijacked an Italian luxury liner Achille Lauro on the Mediterranean off this Egyptian port city.

Berlin: An art exhibition at the Dresden Art Collection here will display rare Indian decorative art.

Brussels: The capital of Belgium brought together the British Defence Secretary Michael Heseltine and American counterpart Casper Weinberger, who agreed to maximise British involvement in Reagan's SDI project.

Kalpakkam: India's first Fast Breeder Reactor went critical at this town near Madras.

Luzon: A deadly typhoon lashed this northern island of Philippines killing more than 50 people and rendering 125,000 homeless.

Male: Capital of Maldives was venue of two-day Commonwealth Finance Minister's meet.

Nassau: Capital of Bahamas hosted the 46 nation Commonwealth Heads of Government Meeting (CHOGM).

Ottawa: Canadian capital will stage the next CHOGM.

Rabat: Indian embassy at the capital of Morocco wound up after Morocco decided to sever diplomatic ties with India.

Reunion Islands: India opened a consulate at this French overseas territory near Madagascar on the Indian ocean.

SADR: The Saharawi Arab Democratic Republic a West Saharan state was recently recognised by India provoking Morocco to snap diplomatic relations with India.

Seoul: Capital of South Korea was the stage of the 42nd annual meeting of the World Bank and the International Monetary Fund.

Sofia: Bulgarian capital held the 23rd general conference of the UNESCO.

Toxteth: In Liverpool (UK) was the scene of renewed racial violence in Britain.

Tunis: PLO headquarters located at the capital of Tunisia were bombed out by Israeli F-15 Phantom fighters Oct 1. S.R.

Maldives held just a week prior to the MF-World Bank joint session in Seoul. South Korea described officially as very successfully organised constructive and positive, the meeting stressed the importance of progress on outstanding issues of the General Agreement on Tariffs and Trade (GATT). The issues include safeguards, non-tariff barriers, agriculture and textiles. Unlike previous meetings, the Male conference found the rich nations agreeing with the poor ones that the world economy was deteriorating and its impact on developing nations would be adverse.

Drop in World Bank aid for India: India's share of World Bank aid this year has dropped to \$2,346m from \$2,722m last year. Central America is getting the larger share \$3.7b compared to just over three billion last year. The breakdown was distributed at the bank's annual meeting with the IMF in Seoul.

Oil solidarity: OPEC members. Petroleum products will be sold to any member of the

Gulf Cooperation Council (GCC) whose oil installations or outlets for export are cut off under an "oil solidarity" agreement reached recently. The agreement complements a 1984 plan under which the six-member alliance would pool crude oil stocks in the event of emergencies. The latest pact would help cover not only domestic needs but also export commitments. The GCC groups are Saudi Arabia, Kuwait, Qatar, United Arab Emirates, Bahrain and Oman.

STATES

The first crack in the G.M. Shah Government of Jammu and Kashmir appeared recently with Deputy Speaker, Malik Ghulam-ud-Din, quitting the ruling faction and rejoining the fold of former G.M. Farooq Abdullah. The strength of the Farooq faction in the state assembly is now 23, while the ruling National Conference (Khaleda) has 42 members. Ghulam-ud-Din cited increasing secessionist activities, curtailment of civil liberties, mounting corruption and the government's failure on the economic front as the reasons for switching back to the Farooq fold. Khaleda Shah, the President of the NCK, welcomed Ghulam-ud-Din's departure and described the deputy speaker as an opportunist.

Traditional fishermen in Kerala: The Kerala Government has launched a major fisheries development scheme designed to augment production and consequently the income of the traditional fishermen, who number 180,000. The scheme marks a radical policy change inasmuch as the stress is now on the traditional fishermen, whose lot is sought to be improved through a multi-pronged strategy of modernisation of boats, supply of improved nets, modern beach landing craft and research and development support for technology. The National Cooperative Development Corporation has approved in principle a Rs 82-crore action plan for 1985-90 and has sanctioned Rs 5.6 crores for the first phase of the project, which will involve the development of 15 villages in Trivandrum, Ernakulam and Cannanore districts.

Increased allocations for Krishna: The second phase of the upper Krishna project in Karnataka will be allocated Rs 400 crores in the Seventh Plan instead of Rs 210 crores as envisaged earlier. This is to ensure the continuity of the assistance from the World Bank and also to accomplish quick results. The state government has sought Rs 500 crores from the bank but will have to spend the money before availing benefits from the funding agency. Says Finance Minister, H.D. Gowda: "In spite of financial constraints we have to necessarily concentrate on the upper Krishna project as it will irrigate 10.5 lakh acres at the end of the third phase in a perpetually drought-affected region." The second phase will irrigate three lakh acres by 1991.

A plan to pool resources to combat terrorism was the main outcome of the north zone conference of chief ministers of Haryana, HP, Jammu and Kashmir, Punjab and Rajasthan held in Manali, HP, recently. Other tangible results included consensus on the need to evolve a uniform tax system for the zone to avoid loss of revenue to any of them. The CMs also agreed to seriously look into the reports of anti-national and anti-social

FROM THOSE WHO CARE FOR YOUR SUCCESS AN ENGLISH SPECIAL FOR BANK EXAMS

(Being released on 19.11.85)

Why?

To:

- Develop your writing skills
- Improve your grasp of the English language
- Help you identify your weak points and eliminate them
- Increase your exam-taking speed
- Give you ample practice in simulated exam conditions just before the exam
- Help you understand the logic behind 'spotting error' exercises.

What?

Techniques of:

- Essay Writing • Precis Writing • Letter Writing
- Comprehension • Spotting Errors

How?

- With tips on how to tackle these sections
- Plus solved examples and
- Exhaustive exercises to assess your performance

All this and much more made available to you in a handy size and at a nominal price of Rs. 7/- only per copy.

By Regd. Post: Rs. 10/-

elements carrying on objectionable activities under cover of running minority educational institutions.

Ban on Manipur terrorists extended: The ban on secessionist and insurgent organisations in Manipur has been extended by another two years to counter the possibility of their regrouping. The groups declared unlawful are the People's Liberation Army, the People's Revolutionary Party of Kangleipak, offshoots of PREPAK and its armed wing, the red army.

EVENTS—National

Recommendations of health care committee: The Health Ministry and the Directorate-general of Health Services (DGHS) should be merged and DGHS doctors should be permitted to engage in private practice. These are among the important recommendations of a committee of experts set up by the PM. The committee, in its report to Rajiv Gandhi, said work was suffering due to the time-consuming and retarding duplication of work between the ministry and the DGHS and health programmes were suffering in the process. The merger or abolishment of one of them would remove the anomaly and allow the health services to function smoothly. DGHS doctors, the seven-page report pointed out, were not given incentives and barred from private practice where their counterparts in other health services were, and urged the PM to make the system uniform. The committee was set up with the objective of going into the problems of health care facilities in the country and recommend measures for rectifying them.

Cleansing the Ganga: The Central Ganga Authority has approved a Rs 292-crore project to clean up the Ganga; of this, Rs 240 crores will be spent during the Seventh Plan. A special action programme for Varanasi prepared by the project directorate in consultation with the UP government has also been approved as part of the works programme. At the authority's first meeting in New Delhi on Oct 7, Union Minister of State for Planning, Ajit Puri, suggested that state governments submit feasibility reports on all pending schemes by December-end. The suggestion was accepted.

Lesson of Bhopal: The Bhopal gas tragedy has not been forgotten, acting on its lesson, the centre has now appointed an inter-ministerial working group to review the measures for control of hazards in chemical, fertiliser and pharmaceutical units. The group, headed by the Secretary, Ministry of Chemicals and Fertilisers, will suggest standards to be incorporated into the industrial licences for units based on hazardous processes. It is also being examined whether any fresh legal provision will be necessary to promote safety in the chemical industry. A team of experts is being constituted to conduct a survey and inspect selected chemical units in metropolitan areas.

Devasthali convention: The Janata Party wants the government to adopt a bolder nuclear policy. This was one of the important points of a political resolution adopted at the Janata's annual convention in Devasthali, UP. The party resolved to launch a nationwide campaign for right to employment to be made

a fundamental right, larger plan allocation for rural development, implementation of the Mandal Commission's report and remunerative prices for agricultural produce. The slogan of the convention was: "Freedom and bread for all."

India has entered a new era in atomic power generation with the commissioning of the 50 Mw fast breeder reactor at Kalpakkam in Tamil Nadu. India is now one of a select band of nations which have successfully tapped the fast breeder technology. The development means India is now in the second stage of its nuclear programme. The future of the 500 Mw prototype fast breeder reactor, now under development, depends on the efficient running of the Kalpakkam reactor. If the experiment proves successful, such reactors are expected to replace the present generation heavy water reactor. The Kalpakkam reactor is also the world's first to use plutonium-uranium-carbide as fuel. The use of the carbide fuel eliminates the need for enriched uranium whose supply is governed by international safeguards.

EVENTS—International

Blueprint for USSR's development: A new blueprint for development of the Soviet Union, reflecting Communist Party leader, Mikhail Gorbachev's emphasis on efficiency, has been unveiled. To replace the programme adopted in 1961 under Nikita Khrushchev's leadership, the new plan will be formally adopted in February, 1986. The plan, a 109-page document, restates the Kremlin's position on issues of the world, including the demand that outer space be excluded from the arms race. Simultaneous dissolution of the Warsaw pact and NATO are proposed to "overcome the division of the world into military-political groupings." But the stress is on better economic performance through efficiency, discipline and broader use of technology.

DIED

Simone Signoret, 64, one of France's best known actresses and an Oscar winner, of a "long and painful" illness in Paris recently. Signoret was also an author of repute.

Charles F. Richter, 85, the pioneering seismologist who helped develop the Richter scale to measure the magnitude of earthquakes, after a long battle with heart disease in Pasadena on Oct 1.

Helen Macinnes, 77, whose spy novels sold millions of copies around the world and were translated into 22 languages, of heart attack in New York on Sept 30.

Abdus Sattar, 79, the only elected civilian President of Bangladesh, of kidney and heart complications in Dhaka on Oct 5.

Yul Brynner, 65, who made more than three dozen films including such highly popular ones as "The Ten Commandments" and "The Magnificent Seven," of cancer in New York on Oct 10. Brynner was most famous for his role of the bald autocratic monarch of Siam in the play "The King and I."

Orson Welles, 70, the burly "boy wonder" of Hollywood who began his career by making the classic "Citizen Kane" and was acknowledged to be one of the world's most gifted film-makers, of natural causes in Los Angeles on Oct 10.

CHESS

THE TIMELESS CHALLENGE

BY JAI SINGH SHEKHAWAT

The world is a chessboard chequered white and black, the colours showing the two conditions of life and death ... the chessmen are men of this world who have a common birth but occupy different stations in life."

—*The Innocent Morality*

The game of chess originated 1,400 years ago in north-west India. Historians are unclear about the true origins of the game, but references in early Sanskrit literature speak of a popular diversion called 'Chaturanga' which is believed to be the forerunner of modern chess. Chaturanga means 'four arms' and was also the name used then for the Indian army, more specifically, the four components of the army, i.e., elephants, cavalry, infantry and chariots—Rooks, Knights, Pawns and Bishops respectively.

In 6 A.D., the game travelled to Persia and Arabia, reaching Europe in the same century with the tide of Arab invaders. It was introduced in England during the Norman conquest.

By the turn of this century, chess was well established, all over Europe and tournaments were commonplace. Though anything approaching a world championship was still a thing of the future, almost any tournament featuring the likes of Adolph Anderssen, William Steinitz, Howard Staunton or Paul Morphy was billed as the 'search for the greatest'. They were undoubtedly the most accomplished players of the day and Steinitz, after beating Anderssen 8-6 in a match, even acquired the habit of describing all his subsequent matches as 'matches for the championship'. However, he bolstered his claim with some superb performances over the next seven years and is now generally accepted as the first chess champion of the world. After Steinitz the somewhat dubious title of World Champion passed through the hands of Emmanuel Lasker, Jose Capablanca and the Russian-born Alexander Alkhine. Then in 1948, the hitherto dormant, Paris-based, Federation Internationale de Echecs (FIDE) flexed its muscles and organised the first official World Championship. It was won by Mikhail Botvinnik followed by Vasily Smyslov and Keres, all from the USSR, and marked the beginning of the chess revolution in Russia. Since then, apart from the brief reigns of Dr Max Euwe and Robert 'Bobby' Fischer, not only the champion but every challenger has been from the Soviet Union.

The Russian interest in chess is quite remarkable. The Establishment encourages the game in every way and to be a chessmaster is to have a secure, distinguished career. The network of local and national tournaments includes a system of rating registered players in every age group. And in the belief that chess inculcates

an interest in general culture, it has been made part of the curriculum in many schools.

Players who now compete in international tournaments get a FIDE rating: this is a numerical assessment of their performance based on the size and strength of the tournament. Certain scores are rated International Master (IM) or Grandmaster (GM), performances. If a player achieves two or three such scores or norms (depending on the total number of games involved) he is awarded the International Master or Grandmaster title. Dibyendu Barua from India, became an IM after winning IM norms at the Lloyds Bank Tournament, London, in 1981 and 1982, and again at Bhilwara in 1983. The high point of his career was his sensational victory over Victor Korchnoi, twice runner-up at the World Championships. And V. Anand, at 14, is the youngest Asian to win an IM norm. Meanwhile, the women have not been idle; sisters Rohini and Jayshree Khadikar have taken India to the top of the pool (after the fourth round) in the 1984 World Chess Olympiad, with upset victories over Canada and England.

The World Championship now takes place in a three-year cycle with the Inter-zonals in the first year, the Candidates in the second, the World Title Match and the Inter-zonals for the next cycle in the third. By current FIDE regulations, the world is divided into 10 geographical zones with one to four players from each zone—depending on its strength—qualifying for the inter-zonals. The top six join the losing finalist in the previous World Championship and the runner-up in the previous Candidates, to form an eight-player Candidates Tournament. The winner earns the right to challenge the World Champion and the final victor is the first player to win six games.

What makes a top class chess player? "Concentration, imagination and a strong memory", says Fischer. And, of course, the will to fight. When grandmasters lock horns across the board, they seem to be linked by imaginary strings humming with the kind of tension that would make an Ali vs Frazier bout look like a friendly chat. The chessboard becomes a mere instrument in that clash of wills, for each has exactly two bishops, two rooks and so on; to push, probe, manipulate and ferret out the labyrinthine continuations fermenting in the other's mind. Played at this level, the game involves not only the individual's intellect but his entire personality and an expert will always

The New Champ

Fourteen long months and 72 games later, Anatoly Karpov of USSR, world champion for 10 years, bowed out to compatriot Garry Kasparov who at 22, becomes the youngest-ever world champion. The scores finally—13-11

tailor his tactics to match his opponent's dislikes. When Karpov squared off against Korchnoi for the world title, he is believed to have analysed every game played by the latter over the last 40 years to get an idea of, among the other things, his response to psychological and time pressure.

People often wonder what grandmasters do to tone down between chess tournaments. The curious answer is that they play more chess; but these are no ordinary games. Take Blitz, for instance. Also known as 'Lightning Chess,' it requires each player to move immediately after his opponent. Moves follow instantaneously and games of a minute or less are frequent. ('Rapid-Transit' chess is a simpler version where players are allowed five or ten seconds a move). In 'Simultaneous chess,' the player, necessarily then, takes on several opponents simultaneously. Stahlberg, the Swedish master, once handled 400 boards in this manner, finishing with the remarkable tally of 22 losses and 364 wins after 36 hours of uninterrupted play. Which brings us to the final form and one that is frequently considered the ultimate mindbender—Blindfold chess. Pasa a moment and time yourself for this question—What is the colour of White's QB5 square? If you answered black you have just performed an extremely simple exercise in blindfold chess. A true exponent will possess an instantaneous recall of the colour of every square as well as the numerous legal positions of every piece; in other words, he can 'see' the board as if he were actually looking at it. In truth this exercise is so difficult that when Philidor played four simultaneous blindfold games, affidavits were drawn up attesting to the fact that the performance had really taken place.

Over the years Morphy, Paulsen and Tati raised that number to eight, 15 and 24. Then in 1947 the Argentinian grandmaster Miguel Najdorf set the chess world ablaze with a truly spectacular display—he played 45 simultaneous blindfold games, winning 39 and losing just 21. But—and now hold your breath—Najdorf's performance is not considered the last word in blindfold chess. The remarkable Dr Rueben Fine once played four simultaneous, rapid-transit games (at 10 seconds a move) and won every one of them!

An article on chess would be incomplete without some mention of the chess clock; the single most important difference between social and competitive chess. Originally there was no time limit and games dragged on interminably. Morphy (and the spectators) who watched the game on vertical display is said to have sat with tears of frustration and boredom running down his face as the hours passed and Paulsen showed no signs of moving. Then a time limit of 20 minutes per move was introduced, with a fine for exceeding it; this too was unsatisfactory as most moves needed much less and a few needed more. Finally the present system was adopted—a time limit for the total time taken over a series of moves. This was first effected through the use of an hour-glass in which sand flowed for each player only when it was his turn to move. In the 1980s it was replaced by the chess clock. This ingenious device actually has two clocks; when a player has moved he pushes a button stopping his clock and starting his opponent's. Some clocks are even equipped with little flags that drop as soon as time expires.

BACK TO PLAY

President of the Indian Hockey Federation (IHF), M.A.M. Ramaswamy and Secretary, K.L. Rasi, forcefully pleaded for the six suspended Indian hockey players at the recent meeting of the International Hockey Federation at Barcelona, Spain. Their cajoling had, at least, a partial effect.

Six Indian hockey players, Somayya, Tikken Singh, Hardeep Singh, Rajinder Singh, Romeo James and Merwyn Fernandez were suspended for a period of eight years, for attacking a Japanese umpire in the Asia Cup in Bangladesh in January this year. Seeking vociferous support from representative of some friendly countries, the severity of the ban was mitigated.

The council finally decided to lift the ban on right-half Somayya, inside-right Tikken Singh and centre-half Hardeep Singh. These three players were asked by the IHF to join the national camp at NIS Patiala. The suspension period of left-half Rajinder Singh, goalkeeper Romeo James and seasoned inside-right Merwyn Fernandez was reduced from eight to five years.

N.K.

IFA SHIELD

The 93rd IFA Shield, scheduled to begin from Nov 14, is among the trio of near century-old football tournaments in the country. The IFA Shield commenced in 1893, whereas the other two, the **Durand Cup** in Delhi and **Revers Cup** in Bombay commenced in 1888 and 1891 respectively.

The state football association of Bengal is known as the Indian Football Association (IFA), which since its inception, organised every year in Calcutta a major football tournament known as the IFA Shield. To provide competitive experience to the Indian club sides and British regimental and departmental sides in football-crazy Bengal was what prompted the commencement of this tournament.

A unique feature of the IFA Shield is that since British teams ceased participating (1947 onwards), the tournament has been won only once by a team from outside Calcutta. This victory was achieved by the Indian Culture League from Bombay in somewhat dubious circumstances. The Bombay side won the trophy, not on the field of play, but by lodging a protest against the eligibility of some players of East Bengal. The protest was upheld and East Bengal were relegated to the second spot. Otherwise Calcutta-based teams have always won the IFA Shield, with East Bengal having the most impressive record—winners 18 times and runners-up six times. East Bengal have also won the tournament thrice in a row from 1949-1951 and four times in a row from 1972-1976.

Arch-rivals Mohun Bagan were the first Indian team to win the IFA Shield. In a memorable encounter, watched by a huge crowd of over 1,00,000, Mohun Bagan beat East Yorkshire Regiment 2-1. They have also won the tournament on 15 occasions and been runners-up 10 times. Mohun Bagan's greatest achievement was finishing joint champions with USSR's leading club team Ararat Erevan in 1978. The match finished in a 2-2 draw, and so the trophy did not go out of Calcutta.

Previously the IFA Shield used to be held directly after league season in the summer months. This year it is being held from Nov 14 to Dec 15. The schedule has been shifted to accommodate foreign club teams. For the first time ever, the Argentinian Club, River Plate, Shakhter Club of USSR, as well as Uruguay's national 'B' team will be seen in action from the quarter-final league stage onwards. The fourth foreign team in action is popular Abhani Krira Chakra from Bangladesh. The 1985 IFA Shield may thus see a reversal in trends, as the trophy may be won by a team outside Calcutta, and is probably destined to go to Argentina, USSR or Uruguay. Another historic occasion in this year's IFA Shield is that from the quarter-final league stage onwards, all matches will be staged at the newly constructed Salt Lake Stadium, with a capacity of over 1,00,000.

To popularise football in Bengal, the preliminary round matches of the IFA Shield are held in the districts like Malda, Nodia, 24 Parganas and Krishnagar. Only the post quarter-final matches are held in Calcutta.

NOVY KAPADIA

DCM FOOTBALL TOURNAMENT

The DCM football tournament held annually in Delhi was started in 1945. Initially it was confined to local teams and outfits from nearby states. Excellent management and enterprise contributed largely to its growing popularity and stature so that in the 1950s, this tournament became a full-fledged national competition attracting entries from many parts of India.

According to G.P. Sinha, organising secretary of the DCM football tournament, "The DCM football tournament is not a marketing gimmick as our main sales area is north India. The only minor publicity benefit for the company is the generous distribution of free passes to people it wants to oblige. The basic aim of the tournament is to earn goodwill and the desire to be associated with excellence by organising the best football tournament in the country."

The most comprehensive sponsorship is that of the DCM. Its annual budget for the prestigious tournament is nearly Rs 20 lakhs. Costs are high because DCM is the only tournament in the country with participation of foreign teams as a regular annual feature.

The DCM football tournament is a trend-setter in Indian football. Since 1968 foreign teams have been annually participating in the DCM. Ethiopian Airlines and Ceylon XI were the initial participants, followed by teams from USSR, Australia, West Germany, Iran, North and South Korea, Bangladesh, Thailand, China and Singapore. Lavish hospitality at five-star hotels for the foreign teams plus generous terms to the leading Indian teams, especially East Bengal and Mohammedan Sporting necessitates a huge expenditure budget.

East Bengal club from Calcutta have the best record, entering the final on 10 occasions and being winners seven times and runners-up thrice. Taj club Teheran are the only team to win the trophy three years in a row from 1969 to 1971. The Liaoning football team from China are holders beating Western Australia Soccer

Federation team 1-0 in the final last year.

The DCM football is above all noted for its pioneering ventures, introducing new teams from both India and abroad. It is the DCM tournament which brought Goa and Punjab on to the football map of India by giving exposure to teams from both these states. Above all they annually provide regular international competition to our leading club teams. For years the DCM football has been associated with the mellow and benign sun of October in Delhi. However, since 1984 the All India Football Federation (AIFF) have re-allocated dates and so the DCM is held in the winter months of November-December after the Durand tournament.

N.K.

NATIONAL GAMES

November, 19, 1985 will be an important day for Indian sport. The historic day, which is also late Mrs Indira Gandhi's birthday, will herald the revival of the National Games. The last such event was held more than a decade back, the exact dates of which even the organisers don't remember.

The National Games will be held from Nov 19 to 26 according to international standards, and specifications. More than 3,000 athletes are expected to participate in the Games which will have 25 disciplines: archery, athletics, badminton, basketball, boxing, cycling, equestrian, football, golf, gymnastics, handball, hockey (men's), hockey (women's), judo, rowing, shooting, swiming, table tennis, lawn tennis, volleyball, weightlifting, wrestling, yachting, kabaddi and kho-kho.

The Games are being organised on a big scale on the lines of the Ninth Asian Games held in 1982. There will be team events and open events according to respective disciplines. The Games will also serve as the basis for picking up players for training them for the 10th Asian Games to be held in Seoul next year. Though most of the top stars are expected to participate, there are apprehensions regarding the competitive quality of the National Games. For instance, Railways and Services will not be participating. The team events will be held from the semi-final stage onward.

The men's hockey participants will be Maharashtra, Punjab, UP and Andhra Pradesh. National champions Indian Airlines will not be there nor will the Services be there. The organisers have announced the Services and Airlines players will be accommodated in any of the four teams. But it is doubtful if such hotch-potch combinations will produce good fare since nothing will be at stake for the participants.

The Indian Olympic Association has chosen a mascot for the 26th National Games. It is the first time ever that a mascot has been chosen for them. The mascot, Raju, is a lion with folded hands and smiling face conveying the message: combination of strength and politeness. The mascot will be a permanent feature of all future Games.

The logo of the National Games is a tricolour background giving them a national colour. It has three chakras in the centre which indicates progress in Indian sport. The chakras have 26 spokes which symbolises 26 disciplines.

affiliated to the IOA. Below it are rings of the International Olympic Committee. The logo has got a motto: "Self-discipline giving strength and spirit."

VIJAY

THE WINNING ELEVEN

Indian cricket has come a long way since the days of Bombay Pentangular cricket in the '30s. The Board of Control for Cricket in India conducts tournaments and championships the whole year round. Currently, there are 11 tournaments conducted by the Board at various levels. There are tournaments for schools and colleges apart from the cricket for seniors.

Ranji Trophy: The symbol of supremacy. It was instituted in 1934-35 in memory of the legendary Maharaja Ranjitsinhji, who played Test cricket for England. It is played among the states with the inter-state matches being of three days' duration, the quarter-finals and semi-finals of four days and the final of five. League at the zonal level and knockout in the quarter-finals.

Duleep Trophy: Instituted in 1961-62. It is played among the five zones—north, west, east, south and central. Apart from the final, which is a five-day affair, the other matches are of four days' duration. Knockout basis. Named after Duleepsinhji, nephew of Ranji.

Irani Cup: Being held since 1959-60. It is played annually between the Ranji Trophy winners and the Rest of India team. It is associated with the name of Z.R. Irani, treasurer of the board for more than three decades and president from 1966 to 1969.

Deodhar Trophy: Limited-overs competition started by the board in 1973-74 and named after Prof D.B. Deodhar, the grand man of Indian cricket from Pune. Contested by the five zones.

Wills Trophy: Limited-overs tournament contested by seven teams. Five teams, who qualify automatically, are the winners from each zone of the Zonal Ranji Trophy League. The other two teams are Board President's XI and Wills XI.

Rohinton Baria Trophy: Inter-University Tournament instituted in 1935. Played at the zonal level first and later knockout basis among the qualifiers from each zone.

Vizy Trophy: Started in 1966-67. Played among the five zones with teams comprising the top university players selected after the Rohinton Baria. It can be called the Duleep Trophy of university cricket.

C.K. Nayudu Trophy: For cricketers under 22. Played at the inter-state and inter-zone level.

Vijay Hazare Trophy: Limited-overs tournament for under-22 players, introduced by the board last year. Named after one of the greatest batsmen produced by India. Played at the inter-zonal level.

Vijay Merchant Trophy: Competition for under-15 and played at the inter-state and inter-zonal level.

Cooch-Bihar Trophy: The best competition for school cricketers in India. Meant for cricketers under 19 years of age. Instituted in 1945-46, it is played at the inter-state and inter-zonal level.

V.L.

AROUND THE TRACKIN 30 DAYS

Athletics

The Fourth World Cup for Track and Field was held at Canberra, Australia from Oct 4 to 6. More than 400 of the world's top athletes representing Europe, Africa, Asia, the Americas (Canada, the Caribbean, South America) and Oceania (Australia, New Zealand and Pacific Islands), along with the US, and two national teams who came first and second in the Europa Cup (GDR and USSR) participated.

Though the US was poorly represented at Canberra, in the sense that not a single Olympic (1984) gold medal winner was present, their depth of talent may be judged from the fact that despite this setback the US still won the men's section.

The highlight of the meet was of course the two world records created by the East German women—Marita Koch set a new standard at **47.60 sec** for the **400m** and their sprint relay quartet of Silke Gladisch, Sabine Rieger, Ingrid Auerswald and Marlies Goehr established the new record of **41.37 sec** in the **4 X 100m relay**. Manta emerged as the top medal winner with three golds.

Results:

Men: 100m: Ben Johnson (Americas) 10.00; **200m:** Robson Caetano Da Silva (Americas) 20.44; **400m:** Michael Franks (USA) 44.47; **800m:** Samuel Koskei (Africa) 1:45.15; **1,500m:** Omar Khalifa (Africa) 3:41.16; **5,000m:** Douglas Padilla (USA) 14:04.11; **10,000m:** Wodajo Bulti (Africa) 29:22.96; **110m hurdles:** Anthony Campbell (USA) 13.35; **400m hurdles:** Andre Phillips (USA) 48.43; **3,000m steeplechase:** Julius Kariuki (Africa) 8:39.51; **high jump:** Patrick Spoeberg (Europe) 2.31m; **pole vault:** Sergei Bubka (URS) 5.85m; **long jump:** Mike Conley (USA) 8.20m; **triple jump:** Willie Banks (USA) 17.58m; **shot put:** Ulf Timmermann (GDR) 12.72; **discus:** Georgy Kolnootchenko (URS) 69.08m; **hammer:** Yuri Tamir (URS) 82.12m; **javelin:** Uwe Hohn (GDR) 96.96m; **4 X 100m relay:** USA 38.10; **4 X 400m relay:** USA 3:00.71.

Women: 100m: Marlies Goehr (GDR) 11.10; **200m:** Manta Koch (GDR) 21.91; **400m:** Marita Koch (GDR) 47.60 (WR); **800m:** Christine Wachtel (GDR) 2:01.57; **1,500m:** Hildegard Kerner (GDR) 3:00.01; **5,000m:** Ulrike Bruns (GDR) 9:14.65; **10,000m:** Aurora Cunha (Europe) 32:07.50; **100m hurdles:** Cornelia Oschkenat (GDR) 12.72; **400m hurdles:** Sabine Busch (GDR) 54.45; **high jump:** Stefka Kostadinova (Europe) 2.00m; **long jump:** Heike Daute-Dreschler (GDR) 7.27m; **shot put:** Natalya Lisovskaya (URS) 20.69m; **discus:** Martina Opitz (GDR) 69.78m; **javelin:** Olga Gavrilova (URS) 66.80m; **4 X 100m relay:** East Germany (GDR) 41.37 (WR); **4 X 400m relay:** East Germany (GDR) 3:19.50.

RECORDS OF THE MONTH

Sofia Turosz of Poland set a world-best for the women's **50km walk** by recording a time of **5:13:49.8** on Oct 14 at the Warsaw stadium. The previous best was 5:29:03.0 by Anne Vandenhoff of USA, set in 1980.

Boxing

On Oct 9 at Bangkok, the WBC stripped Michael Spinks (USA) of his light heavyweight world title. In September, Spinks had become the only light heavyweight to win the world heavyweight title when he outpointed Larry Holmes (USA), holder of the IBF (International Boxing Federation) version of the heavyweight title. WBC rules do not permit a boxer to hold titles in more than one weight class.

Cricket

The national zonal championship for the **Duleep Trophy** was won by West Zone, as they outplayed blending champions South Zone by nine wickets in the final at Bangalore which finished on Oct 21. This was the 12th triumph for West Zone.

The five-day **Irani Trophy** between Bombay (winners of the **Duleep Trophy**) and the Rest of India ended in a draw at Nagpur on Oct 28. Bombay, by virtue of their first innings lead regained the trophy, and it was their 12th triumph.

Football

Madhyamgram High School from West Bengal won the **Subroto Mukherjee Cup** for schoolteams under 17 years, played at the Ambedkar Stadium in New Delhi on Oct 16. Thrice winners (1981, '82 and '83) Government School, Dimapur, 1-0. Madhyamgram is the only team to win four times outright—an all-time record.

Mohun Bagan won the 97th **Durand** football tournament beating JCT Mills Phagwara 3-2 via the tie-breaker in the final played before a capacity crowd at the Ambedkar Stadium, Delhi on Nov 2. The match ended goalless, even after 120 minutes of listless play, 90 minutes of regulation time and 30 minutes of extra-time. With this victory, Mohun Bagan have improved their impressive record in the Durand Cup—they have now won the cup 13 times, 11 times outright, twice joint-winners in 19 appearances in the final.

Hockey

At Barcelona, in the Intercontinental Cup Tournament, which forms the qualifying tournament for the World Cup, Spain defeated former Olympic Champions New Zealand 9-7 on penalties, after they were deadlocked at 2-2 after full-time. Third place went to Poland, with another victory on penalties over Canada, after their play-off also ended 2-2. These four teams, along with fifth placed Argentina qualified for next year's World Cup in London.

A four-nation tournament was held at Willesden, near London in which an experimental Indian squad was sent. The tournament was a disaster for India. Still reeling under the impact of having five players banned, the team proved woefully inadequate for international pressures. Holland emerged on top, with wins over second-placed Soviet Union (3-0), England (2-0) and bottom-placed India (1-0). The Indians also lost their other matches—2-0 to the Russians and 2-1 to England, managing to score only one goal.

70 seconds KEY UNLOCKS YOUR FULL POWER FULL POTENTIAL

Amazing results achieved for tens of thousands of men—the world over! Now you can try **FREE** OF ANY RISK the world's most tested and **SUCCESSFUL** power and muscle building method.

The famous 70 seconds-a-day **ISOTONIC** **ISOMETRIC** **CONTRACTION** method is the **PROVEN** **KEY** that unlocks **POWER**. Unlocks the **SUPERBODY** you've always dreamed of!

Standing in front of your bedroom mirror, it's so easy to feel yourself about your physical condition. Do you *honestly* have a physique that other men envy and women admire? If not, here's news that will astound you.

An utterly revolutionary new kind of body-builder has been designed to give you the kind of physique you've always wanted in a matter of only weeks!

Imagine yourself with steel-hard muscles ... powerful man sized biceps ... thighs like massive tree trunks! Now you can turn it into reality! This new device is **BULLWORKER-3**. It simply uses the latest scientific isotonic/isometric principles to pack dynamic new strength and vigour into your whole body—many times faster than conventional technique. And you can prove it for yourself in only 14 days!

Fitness expert reveals how these 7 exercises can build a power-packed body in exactly 49 seconds a day!

Former Mr. Universe, Len Salt, demonstrating the simple series of 7-second Bullworker-3 exercises

1 This exercise develops Deep Muscular and Powerful Chest.

2 This exercise builds steel-like rippling biceps.

3 Here's how to attain that handsome athletic 'V' shape torso.

4 This exercise builds back muscles, gives you that 'man-of-action' look.

5 This one charges your forearms with new strength.

6 Here's how you can develop muscular shoulders.

7 Moulds flabby stomach fat into a firm wall of muscle.

I CHALLENGE YOU!

Try a 5-minute workout with **BULLWORKER-3** every day for 14 days. If, after that, you do not **LOOK** and **FEEL** stronger, tougher, more dynamic, simply return everything to us and it will not have cost you a penny!

BUILT IN POWERMETER

Means you can actually watch your muscle-power **G-R-O-W-I-N-G** day-by-day!

Also available at leading Sport Shops.

Available by VPP for Rs. 314/- from Bullworker, Dept. 539-R/86, Motte Mohal, 15 Mathew Road, Bombay 400 004

FREE!

- 24 page booklet with illustrated exercise worksheets
- Nutrition and training guide
- Bullworker carrying case

Sold in over 38 countries world-wide

14 DAYS FREE HOME TRIAL COUPON

BULLWORKER, Motte Mohal, 15 Mathew Road, Bombay 400 004 **539-R, C.C.T-99**

Please rush me **BULLWORKER-3**. I understand that if I am not fully satisfied within 14 days I may return everything for an immediate refund of price (less handling & forwarding charges)

Please tick ☐ appropriate box.

☐ Send by "Registered Post Parcel" (I am sending Rs. 314/- by Draft/I.P.O./M.O. No.) (Payable to Bullworker Pvt. Ltd.)

CURRENT EVENTS: International (Continued from page 32)

government's prior concern will have to be the economy. Cavaco Silva's platform calls for a major economic overhaul, including a campaign to deprivatise selected state industries. He also intends to lower interest rates and slow the government's monthly devaluation of the escudo, the Portugal currency. Although this may help to reduce Portugal's 20% inflation rate, it could also adversely affect the balance of payments. What analysts also fear is that the minority government may not be too stable. It will be Portugal's 16th government in 11 years, and if a Eanes' backed candidate wins the next Presidential elections, he could dissolve the Parliament and call for fresh elections.

LIBERIA

BACK TO DOE

Gen Samuel Doe was elected the new President of Liberia, in elections held in mid-October, by winning a majority of 51% of the votes. Doe had first come to power in 1980, when some fellow soldiers of Doe, then a master-sergeant, killed President William Tolbert and toppled his government. He has ruled since then with a heavy hand. Wishing to give himself legitimacy he called for elections recently. However, although he lifted a ban on political activities 15 months ago, a military decree sanctioned the arrest of individuals who spread "disinformation" about the country's rulers, thus stifling debate. The Election Commission also banned some opposition parties because they followed "foreign ideologies." Even at the election some unfair practices were observed, but US and European diplomats who monitored selected voting stations in eight of Liberia's 13 counties, said that, for the most part, the elections were orderly. It is hoped that the national elections would be a stepping stone to the restoration of a civilian, parliamentary regime in the country.

Liberia, however, faces grave domestic problems. Since Doe came to power in 1980, slumping iron ore and rubber prices and mismanagement have doubled Liberia's foreign debt, which is now more than \$1b. Besides, unemployment is rampant, the figure for Monrovia itself being 60%. Further, thousands of government workers have not

been paid for months. Doe's new government, therefore, faces a major uphill task to pull the country out of the doldrums.

US-TURKEY

TERMS OF AGREEMENT

The existing defence and economic cooperation agreement between the US and Turkey is due to expire in December, and what Turkey now wants is a treaty rather than an agreement, a request which is sure to be turned down by the US Congress. As an alternative, Turgut Ozal's government in Turkey wants to renegotiate the entire agreement. Ozal feels that since Turkey provides the Americans with a large number of intelligence-gathering stations and air bases, the Americans should give more aid to the poorly equipped Turkish armed forces and to the struggling economy. Turkey ranks third, after Israel and Egypt, as a recipient of American monetary aid, getting \$785m worth military aid and \$150m worth economic support this year. What it now seeks is \$1.2b a year over the next five years. The Turks also feel that the amount earmarked for them has been whittled down by the US Congress over the last few administrations, and argue that a determined administration could withstand congressional resistance.

The Turks also complain about the seven to 10 military aid ratio to Greece and Turkey, which has been conventionally followed. Turkey's importance in the NATO is more than that of Greece and it feels that this ratio makes no sense. However, the Greek lobby in Congress is too strong to allow any change.

The Americans, too, wish to negotiate with Turkey on some points. They want it to give the Voice of America broadcasting facilities in Turkey as well as readier access to its ports for their warships and the complete use of the Incirlik air base in the case of a Middle Eastern emergency. They also want more active Turkish support for their plans to move their rapid deployment force quickly into the area in a crisis.

Analysts feel that a new agreement will be signed because the anti-American political left could otherwise take over power. However, Ozal is keeping his options open and to show that he is not a "running dog" of the Americans himself, he sent his Chief of the General Staff, Gen Uruq, to Moscow, on Oct 11.

S.B.

NEWS IN BRIEF

(Continued from page 26)

in the Middle East. In Amman, the Palestine Liberation Organisation's (PLO) Yasser Arafat and Jordan's King Hussein agreed on a "framework of common actions" reaching a settlement with Israel over the fate of 1.3m Palestinians in the Israeli occupied West Bank and Gaza Strip. In February, the Russians and the Americans discussed the Middle East in Vienna for the first time since 1977. President Hosni Mubarak of Egypt also tried to enlist the help of the US and Iraq.

In May, Israel and Lebanon completed a controversial and lopsided exchange of prisoners of war (POWs): 1,150 Palestinians and Lebanese (including terrorists) for three Israeli POWs.

The Israeli withdrawal, however, meant fresh trouble for Lebanon. The illusion of national unity vanished and Shia-Sunni trouble broke out almost immediately. Christians were also attacked by Druze and Muslims at villages near Sidon after Christian militiamen belonging to the Lebanese forces pulled out of the heights above Sidon. As faction fighting spread, a car bomb exploded in the densely populated Shiite Muslim suburb of Beirut, killing 75 people. The explosion occurred near the home of Sheikh Mohammad Hussein Fadallah, leader of the extremist Hizballah organisation, which had been trying to capture the leadership of the Lebanese Shias through a call for establishing an Islamic republic on the lines of Iran. The party had many enemies including the Christian Phalangist party and the secular Shiite Amal movement. In May a car bomb exploded in the

Christian sector of Beirut killing 55 people. Shiite militiamen also battled with Palestinians for control of three Palestinian refugee camps.

By early June there were signs of Syrian forces moving out to restore order. Trouble again broke out in August and 300 people died, nearly half of them victims of car bomb explosions. President Hafez Assad then tried to extend Syrian influence by calling a meeting of Lebanese Muslim leaders at Damascus. He drew up a 16 point plan, that was decreed by the Lebanese Christians and new bickering again broke out between them and the Druze and Shiite Amal leaders and the car bomb warfare was renewed. PM Karami asked Syria to deploy its troops throughout Beirut thus letting Lebanon become more and more dependent on Syria.

Iran-Iraq

In March, the Iranians launched a fresh offensive that was quelled by Iraqi fire power. Later in the year Iran claimed that Iraqi missile attacks on 14 Iranian towns had left 78 dead and 326 injured. Iraq had also been continuously bombarding Teheran. The war, however, goes on.

DIED

Robert Fitzgerald, 74, poet, critic, translator and journalist, whose best known translations are of Homer's Iliad and Odyssey. He was named the Boylston Professor of Rhetoric and Oratory at Harvard in 1965.

Massahisa Takenaka, 51, Japan's reigning godfather since June 1984, when he became Chieftain of the 10,400 member Yamaguchi-gumi, the country's largest group

of yakuza (gangsters), of gunshot wounds.

Frank Oppenheimer, 72, physicist, who along with his brother, J. Robert Oppenheimer, did pioneering research on radiation and cosmic-rays and worked on the World War II Manhattan Project to produce the atom bomb.

James Hadley Chase, 78, popular British mystery writer, who wrote nearly 100 books of which 30 became films and plays on Feb 6, at his home at Corseause Sur-Vevay in Switzerland.

Henry Hathaway, 86, Hollywood director of more than 60 hit action-adventure movies including *The Lives of a Bengal Lancer*, *The Desert Fox* and *True Grit*.

Charles Shepard, 70, medical researcher who in 1960 first succeeded in growing the microbe that causes leprosy, in lab animals, a breakthrough leading to the development of preventive measures. He was also one of the two researchers, who in 1970 isolated the bacterium that causes *Legionaire's* disease.

Iosif Shklovskii, 68, Soviet astrophysicist and radio astronomer, who made basic discoveries about neutron stars, quasars and novae and also led the Soviet research on extra-terrestrial intelligence. His 1966 collaborative work with US Astronomer Carl Sagan, *Intelligent Life in the Universe*, is still among the basic books on the prospects for life beyond earth.

Patricia Robert Harris, 60, lawyer and educator, the first black American woman to hold a Cabinet post (President Carter's Secretary of Housing and Urban Development and then of Health, Education and Welfare) or serve as a US Ambassador (Ambassador to Luxembourg during President Johnson's time).

CAREER NEWS

FCO Scholarships

Scholarships in the areas of business and management studies, defence/war/international studies, media/journalism/communications studies for practising journalists and lawyers are to be announced by the Ministry of Education and Culture, Government of India. The scholarships will be offered under the Foreign and Commonwealth Office (FCO) Scholarship and Awards Schemes, 1986/87. For further details please contact the External Scholarships Division, Shastri Bhavan, New Delhi.

LIC Agents

How would you like to go round insuring people's lives? Sounds both tough and exciting, doesn't it? The Life Insurance Corporation of India is looking for young men and women who are either matriculates or graduates to be trained as insurance agents. If you are prepared to put in some sincere hard work, visit or mail complete bio-data to the nearest career agent's branch of the Life Insurance Corporation of India. For details you may look up *Employment News*, dated Oct 26, 1985.

PO Exams

The Central Recruitment Board (State Bank Group) will hold written exams on Feb 16, 1986, to select 500 POs for

appointment in the State Bank of India. The last date for submitting applications is Dec 9, 1985. For application format and other details see *Navbharat Times*, dated Nov 7, 1985.

SC/ST Scholarships

A special ONGC scholarship scheme has been announced exclusively for SC/ST students pursuing full-time graduate engineering courses at the IITs or the Regional Engineering Colleges. The 25 scholarships, tenable from the second year of the engineering course will be awarded to selected students with performance levels of 6.5 or above grade point average out of ten or equivalent, in the first year alone.

SUCCESSFUL INDIAN OF '85

Readers, write in whom you think fills the above bill. Only:

■ The person must be an Indian citizen;

■ Must have achieved something in 1985 which has made every Indian proud;

■ Must have risen to the top.

Send in your nomination latest by December 30 on a postcard with your name, age and address. Also, indicate in four lines the reason for your nomination. The first 25 best nominations have an attractive but surprise gift waiting.

• Send in your applications in accordance with the format and other details published in *The Statesman*, Oct 23, 1985, to reach the Deputy General Manager (Administrative), ONGC, Tel Bhawan, Dehra Dun, before Dec 23, 1985.

BSRB Central Group

The BSRB (Central Group), Lucknow, invites applications from Indian citizens for appointments in the Allahabad Bank. The written exam for POs will be held on Dec 29, 1985, and for Agriculture Field Officer Small-scale Industry Field Officer on Jan 12, 1986. The last date for submitting forms is Nov 21, 1985. For details see *Employment News* dated Nov 9, 1985.

Assignment Abroad

A wide range of opportunities have been thrown open by the Commonwealth Secretariat (Commonwealth Fund for Technical Co-operation) to suitable candidates who are interested in short or long-term assignments in the Commonwealth developing countries.

If you are a Commonwealth national, within the broad age-range 35 to 60 years and preferably with work experience in the developing countries, you may register your name with the Recruitment Section, Commonwealth Secretariat, Marlborough House, Pall Mall, London W1Y 5HX, 01-8393411, extn 8151.

For details see *The Economist*, Oct 19-25, 1985 or for a copy of the advertisement please send us postage stamps worth Re 1 along with a self-addressed stamped envelope.

Answers to

TEST YOUR WORD POWER

- abstain:** A: to hold away from; refrain. Younger women who smoke stand the same chance of getting uterine cancer as those who abstain.
- ale:** B: light-coloured beer. To concoct ales and lagers, brewers must orchestrate a series of chemical reactions in which yeast cells break down starches or sugars into ethanol and carbon dioxide.
- blitz:** C: a swift, sudden violent attack (specially from the air); an intensive non-military campaign. Billed simply as a "celebration" of Indian culture, the Festival of India is likely to be the most elaborate and far-reaching cultural blitz ever to hit the US.
- boisterous:** B: noisy; turbulent; violent; rough; wild; rowdy. The annual gatherings of Britain's Trades Union Congress are always boisterous affairs.
- cavity:** C: hollow; small hole within a solid body. Sugar interacts with bacteria in the mouth, producing acids that bore holes—cavities—in the teeth.
- choos:** C: total disorder or confusion. Just months after the military coup that overthrew President Milton Obote, Uganda is grappling with new internal feuds and drifting once again toward chaos.
- counterfeit:** D: forged; false; sham; something made to resemble some genuine thing with the intent to deceive. The world's airlines have lost up to \$ 500m a year because of stolen, altered or counterfeit tickets.
- deport:** A: to expel or banish from a country, often for political reasons. According to the agreement reached between the Centre and Assam agitation leaders, none of the immigrants who arrived in Assam after 1966 will be permitted to vote for the next 10 years—and all immigrants who arrived after 1971 will be deported.
- elude:** A: to dodge; slip away from; avoid adroitly. Zbigniew Bujak, the 30-year-old leader of underground Solidarity, has managed to elude Polish authorities since late 1981.
- ferment:** A: to undergo chemical changes through the action of organic bodies. Commercial beer generally takes eight days to ferment and six weeks to mature.
- galvanise:** A: to shock or rouse. In his first 40 days as President of Peru, Alan Garcia Perez has not only imposed a series of stiff austerity measures, but has managed to galvanise popular support for them.
- mausoleum:** C: a large stately tomb. In 1980, Peking formally resurrected Genghis Khan to his lofty status of folk hero and put crews to work to restore his mausoleum.
- opulence:** C: wealth; luxuriance; affluence. The sinking of the Titanic on its maiden voyage, and the death of more than 1,500 of the 2,200 passengers on board, had signalled the end of the Edwardian era in all its cocky opulence.
- precarious:** B: uncertain; unsafe; depending upon chance. Third World debtors and Western lenders share a precarious and often stormy coexistence.
- revile:** A: to attack with contemptuous language, abuse. During the Cultural Revolution, Genghis Khan was officially reviled for the suffering he inflicted upon millions as his Mongol troops slaughtered and pillaged their way across Central Asia in the 13th century.
- soporific:** D: causing sleep. Despite its subtle elegance, world-championship chess ranks among the most soporific of all spectator sports.
- squabble:** B: petty or noisy quarrel, wrangle. Squabbles between France and the island nations of the Pacific are nothing new; but the Rainbow Warrior bombing, coming on the heels of the New Caledonia dispute, has stretched nerves taut.
- subside:** A: to go down slowly; become quieter after being violent; settle; descend. Since the debt crisis struck three years ago, tensions between lenders and borrowers have periodically flared and subsided.
- troupe:** D: company of performers. For the first time since the early 1960s, a Mongolian folk arts troupe will tour China and Inner Mongolia.
- tycoon:** D: wealthy and powerful businessman or industrialist. In the 1930s, ethnic Chinese tycoons in what are now Singapore and Malaysia provided considerable aid for the country's battle against Japan.

17-15 correct excellent
14-12 correct good

PREPARING FOR THE PO EXAM

BY MRUGESH JANI

The Bank Probationary Officer's exams are on the anvil. A question by question analysis of how to go about preparing for the PO exams and the interview which follows, based on the author's experiences as a successful PO.

The bank Probationary Officer (PO) exam is essentially designed to test the candidate's overall intellectual capability and depth of understanding. The type of questions asked and the time available to answer them ensure that the candidate has a comparatively high level of quantitative aptitude, a good comprehension of the English language and a well organised and systematic power of expression.

The exam is conducted in two parts. The first part consists entirely of objective type questions divided into the following sections: (i) about 50 questions on quantitative aptitude to be attempted in about 30 minutes; (ii) about 100 questions on English comprehension (from passages), sentence completion, vocabulary, etc to be attempted in about 60 minutes, and (iii) about 50 questions on General Knowledge.

The second part of the written exam attempts to test the candidate's power of expression in the English language. It consists of an essay (compulsory) and a choice is offered between a letter and a precis.

Time Allotment

Usually the Banking Service Recruitment Boards and the SBI Board advertise in all major dailies about three to four months prior to the date of the exam. As such, the candidate has adequate time to prepare thoroughly for all the subjects. To ensure success, start preparing at least three months in advance.

A time table is a must to help you to avoid neglect of any subject as well as to assess your progress and achievement after you have gone through all the topics at least once. The best way to prepare systematically is to allot the time available—usually three months for four topics, viz.

- (1) Quantitative Aptitude; (2) English (Descriptive); (3) General knowledge; and (4) English (Objective). But one must be

cautious enough not to neglect any topic, even though he or she may be good at it. This is important in order to attempt all or most of the questions because the time available is limited and the speed required can be achieved only through practice.

In general, you must devote more time to the objective type English exercises and Quantitative Aptitude followed by General Knowledge, essay writing, letter writing and precis writing.

Preparation

(a) **Quantitative Aptitude (Objective):** As mentioned above, the QA section contains about 50 questions. These are designed to test the candidate's general ability in arithmetic and not in any specific branch of mathematics. A familiarity with all types of questions in general arithmetic, business arithmetic and elementary algebra is essential.

Preparation for this test may be done through any standard book available for the bank PO exam. The standard books for the GMAT and the GRE are also useful.

(b) **English (Objective):** There are about 100 questions in this section on passage comprehension, vocabulary, sentence correction, sentence completion, etc. Since this section tests the candidate's overall comprehension and knowledge of the English language it is essential to read newspapers and magazines regularly. At least one national daily and one weekly or fortnightly magazine in English has to be read.

In this section, special attention should be paid to develop one's vocabulary in order to attempt the question on synonyms and antonyms. A good word list in any bank PO book consists of about 1500 words. You may try to remember about 15 words every day. Also useful are the relatively common words published in the *Test Your Word Power* section of *CCTimes*.

For other topics in this section, a standard book on the bank PO exam, will be adequate as also the GMAT and GRE books.

(c) **General Knowledge (Objective):** There are about 50 questions in this section, most of them being on current affairs. As such, you must keep yourself abreast of current events of national and international importance. For this, note down all major events reported in the newspapers/magazines. Also go through the *Current Events* section of any competition magazine.

(d) **English (Objective):** This forms the second part of the written exam and

consists of an essay, letter-writing and/or precis-writing. Usually the essay is compulsory and a choice is given between writing a letter and writing a precis. Since a good command over the English language is necessary and this can be achieved by reading newspapers and magazines regularly as also by strengthening one's vocabulary.

Anticipating the essay topics is not easy. There will be three to four topics on any one of has to be attempted. Usually one topic will be related to the banking industry and at least one more on a subject of national importance during that period. For instance, in the next six months, there may be one topic on the role of banks in rural development and one on the new educational policy or on political reforms.

Practice Tests

After going through the fundamentals of solving the questions on Quantitative Aptitude and those on English, the best way of proceeding further is to take the practice tests regularly. Such tests can be found in any standard Bank PO book as also in the GMAT/GRE book. Besides, *Practice Tests* appearing in the *CCTimes* also very useful.

Attempt the practice tests questions within a specific time period. For instance, in the exam, usually 50 questions on quantitative aptitude have to be attempted in 30 minutes. This means that a candidate has about 35 seconds to solve one question and mark its answer.

General Tips

- Do not ignore any topic completely even if you have been very good at it in the past. Regular practice before the exam is most essential.
- For the QA test, make a list of formulae and other important points in order to remember them easily and quickly. Some important points in English which may require frequent revision should also be noted down.
- A few days before the exam the *BSAB* sends a test booklet to all the candidates alongwith a specimen of the answer sheet. Practise filling the answer sheet at least once.
- During the exam, if you find a particular question difficult, leave it out and go on to the next question. If you spend more time on a difficult question, you may not get any time for those questions which may be easier for you to solve. The difficult ones can be tackled later, if time permits.
- Read regularly, systematically and sincerely with adequate relaxation in between, to gain confidence and realise that, though the task may be a little difficult, it is not out of reach.

The author makes no mention of the Test of Reasoning questions.

PREPARING FOR THE INTERVIEW

The aim of the interviewer is to get an insight into the candidate's personality and to evaluate his suitability for the job. Mental alertness, balance of judgment, power of assimilation, awareness of events happening around, temperament, leadership, intellectual and moral integrity, ability for social cohesion, etc in the candidate are judged through a friendly but purposive conversation. The interviewer observes whether the candidate is cheerful, keen, confident, sure of himself, willing to learn, shows readiness to accept mistakes and is endowed with an optimistic and cooperative attitude towards life.

The topics that are most commonly raised in an interview are: (1) details of your interest in the bank PO job and the alternatives that you have thought in case you do not get selected for the same; (2) your background, education; (3) knowledge about the banking industry; (4) current events.

The interview board attempts to gauge a candidate's reflexes, clarity of thought and expression and his power of assimilation. For this, one must discuss likely questions with parents or friends. During such discussions, one should try to speak clearly, comprehensively and without any ambiguity. One must be ready to speak about any subject which he may have mentioned in his answer to a particular question. For instance, if a candidate refers to being a good player of cricket, he should know the rules of the game, names of famous test players, etc.

During discussions with friends, one must try to find an opportunity to draw the interviewer's attention to one's achievements and qualities and should refrain from speaking about one's failures and weaknesses.

Psychologists opine that a person performs better in a familiar situation. Simulating an interview in the home or with friends will give the right kind of confidence and will also help in overcoming one's drawbacks in one's sitting posture, etiquette, etc.

The author, now a successful PC, gives an account of his own interview. "The Chairman began with the first question which was on my decision to join the bank as a Probationary Officer. I replied that I was interested in a service-oriented industry, particularly the banking industry, which provided a satisfying and secure job. The second question he asked was on the role of banks in the economy and the improvements that I think should be made

in the banking services. Lastly he asked me about the specific contribution of banks in rural development.

The second member asked my views on the reluctance shown by POs to serve in rural areas and whether I would be willing to work in a village with erratic electric supply. I replied that young POs without the problem of children's education—a major problem in the rural areas—should readily go to these areas.

Regarding working in a village with erratic electric supply I replied that even in a metropolitan city like Calcutta people were not assured of regular electric supply and therefore I did not mind working either in a village or in a metropolitan city. I also stressed that it should be made compulsory for POs to work in rural areas at least for a few initial years.

The third member asked me about the rates of interest on different accounts, whether I had any bank account and whether I knew how to operate the account.

The fourth member then took over and asked a plethora of questions on the election results which had caused quite a stir."

M.J.

BANKING ON FIGURES

1. Number of **bank branches** at the end of 1984-50,980 i.e. roughly one bank office for every 13,000 of the population. At the time of nationalisation in 1968, the number of persons served by each branch stood at 65,000.
2. **Ratio of financial assets to GDP** rose from 38% in 1950 to 73% in 1975 and then to 103% in 1980.
3. The number of **bank employees** has risen from about 1.5 lakhs in June 1969 to over 7 lakhs at the end of 1984.
4. During the fortnight ending Oct 11 **bank deposits** have risen to Rs 78,619.41 crores from Rs 78,539 crores on Sep 27.
5. **Investments** declined from Rs 19,283.08 crores to Rs 18,663.55 crores.
6. **Cash balances** have jumped to Rs 12,315.42 crores from Rs 11,473.42 crores.
7. **Approved securities** have increased to Rs 10,466.56 from Rs 10,233.37 crores.
8. **Borrowings** from RBI have risen from Rs 912.52 crores to Rs 1,038.49 crores.
9. **Food credit** increased to Rs 5,859.58 crores from Rs 5,847.41.
10. **Aggregate advances** rose to Rs 50,702.08 crores from Rs 50,524.66 crores.

S.I.

TERMS OF PAYMENT

ACCOUNTS

Fixed Deposit Accounts are accounts of those bank deposits which have been credited in the bank for a fixed period, specified in advance. Fixed deposits are repayable on the expiry of the specified period, chosen by the depositor. These deposits constitute more than half the total bank deposits.

Savings Bank Account is an account which helps the depositor to save a part of his current income to meet his future needs and also to earn an income from his savings. Banks impose certain restrictions on the savings bank account and at the same time offer a reasonable rate of interest on it.

Recurring Deposits or Cumulative Deposit Accounts are variants of the savings bank account. A depositor opening a recurring deposit account is required to deposit an amount chosen by him, generally a multiple of Rs 5 to Rs 10, in his account every month for a period selected by him. The period of recurring varies from bank to bank.

Current Accounts are running and active accounts which may be operated upon any number of times during a working day.

Joint Account is one opened by two or more persons jointly.

Cheque Book contains bank forms of cheques which are used as an instrument to withdraw money from the bank. In case of a savings bank account a cheque book is provided to only those who have a minimum balance of Rs 100 or Rs 200 to their credit.

Maturity of a promissory note or a bill of exchange is the date on which the payment becomes due.

PAYMENT MODES

Negotiable Instruments are promissory notes, bills of exchange and cheques, payable either to order or the bearer.

Promissory Note is a written promise by the debtor to pay the creditor a certain sum of money.

Cheque is a bill of exchange drawn on a specified banker to be payable only on demand. A **bearer cheque** is a cheque, to pay which, the paying banker need not seek the identification of the bearer of the cheque. "**Crossing**" is an "instruction" given to the paying banker to pay the amount of the cheque through a banker only and not directly to the person presenting it at the counter. In a **crossed cheque** two parallel lines are drawn on the face of the cheque and "and Company" (or "& Co") written in between the lines. The addition of the name of a banker across the face of a cheque constitutes special crossing.

Pay-In-Slips are slips with perforated counter foils used by customers to deposit money by way of either cash, cheques, drafts or bills.

Mail Transfers money can be sent through mail transfers to anyone who has an account. All the sender has to do is to furnish details like the name of the beneficiary, his/her account number, the amount to be transferred and the name of the branch where the account is maintained.

S.I.

THE SECOND GREEN REVOLUTION

After four decades of planning against the background of perennial shortages, India is now faced with a food surplus economy which has caught her policy-makers napping. It may at first sight appear absurd, if not downright callous, to talk of food surpluses in a country where as much as a quarter of the population still does not have enough to eat. But the usually strong "hathia" rains that most of the country has experienced in the last few weeks boosted the country's buffer stocks to 30m tonnes by July; the Food Corporation of India (FCI) estimates that this will rise to 34m tonnes next year and 40m by the end of the Seventh Plan.

The reason for this surplus is the change that has occurred in the traditional foodgrain production pattern in the country. For over two decades the surplus states were the ones that grew wheat while the deficit states grew paddy. As a result wheat had to be shipped in large quantities by the former to the latter group of states. Since the rice revolution, which boosted output by nearly 50% over the peak of 43m tonnes attained in the early seventies, the demand for wheat from the paddy growing states has dropped very sharply. Thus, instead of being a means of taming inflation the grain mountain is now becoming a source of inflation. Things have come to such a pass that it will be cheaper for the government to pay a limited number of wheat farmers to leave their land fallow than to procure excess wheat which has to be added to the food mountain. But this is the kind of antic only the rich, European and North American countries can indulge in; not a country where over 70% of the population is associated with agriculture.

Much of the present mess can be traced to the bad warehousing facilities in India. Geared, as it has been to handling scarcities, the FCI is finding itself totally incapable of managing a surplus. The FCI owns about 9m tonnes of storage capacity. The other storage agencies are the Central Warehousing Corporation and the State Warehousing Corporation, besides private godowns constructed on a guaranteed basis on behalf of the FCI a few years ago. Nearly 3m tonnes are held in open storages throughout the country. It is reported that only 80% of the covered accommodation has been utilised by the FCI, while huge stocks lie in the open under polythene covers.

The problem of warehousing could be mitigated in four ways. Warehousing of foodgrains could be placed under a single agency for better co-ordination and perhaps reduction in the cost of operations. There has to be a complete review of the staffing norms which should bear some relationship to the nature of operations. There have been allegations that most of the top executives of the FCI spend their time tackling union rivalries and staff disputes. It is no exaggeration to mention that none of them has either the time or mood to evolve fresh strategies and plans to tackle the kind of challenging situation which has arisen due to the surplus. The discrepancy between actual utilisation of space as against the full capacity of the godowns is due to the indisciplined labour and bad planning. In a scientifically constructed godown there is always scope for better stack planning and better space utilisation by at least 20%. Stack units (say 1,000 bags per stack) for wheat can go up to 18 or 20 bags high instead of 14. But the labourers refuse to do the higher stacking even when they are offered higher wages. In most storage depots, the top layer would never be completed to form a homogeneous unit. The different varieties of both rice and wheat also add to the problem. The reluctance of labour is probably due to lack of stamina. This leads us to the question of mechanisation of the operations in the godowns—FCI godowns could be equipped with fork lifts, mobile conveyer belts and small cranes besides automatic weightbridges. Finally, computers could be used for stock accounting and staff requirements to eliminate malpractices like manipulation of accounts of receipts and issues and avoid exaggerated transit and storage losses.

But all this will only solve the problem temporarily. More concrete measures could be taken. The government could, for example, abolish the bonus of Rs 5 per quintal given to Punjab farmers for political reasons. The procurement price of wheat could be frozen for two years, thus ensuring profitability without eradicating it.

The Food-For-Work schemes must be expanded and made more labour intensive, with a simultaneous increase in the quota given per person. The export market could also be exploited; the rice grown in the Punjab is of the superfine PR-106 variety which would fetch good prices in the world markets. More than all this, it could make a gift of a million tonnes of grain to the International Emergency Food Reserve. But as a long-term measure, the government could use the price mechanism to make farmers switch from

wheat to other crops—pulses, oilseeds, vegetables, trees and fodder crops. Crops like pulses and oil seeds need much less irrigation than rice and wheat—so irrigation resources could be stretched much further by a shift in production.

Some very drastic steps will have to be taken: or India's surplus food, instead of enriching her, will ultimately bankrupt her.

SEVENTH PLAN

The drafters of the Seventh Plan have been luckier than drafters of previous plans, in that they have had a stronger base to work on since the Sixth Plan has been somewhat of a success and the Indian economy has moved to a higher growth plan since the mid-seventies. The Sixth Plan aggregate growth target of 5.2% has been achieved.

In agriculture, while the production target was 3.8, the actuals stood at 4.4%. But in industry, the performance fell short of target in basic industries like steel, fertiliser and cement, and textiles. The overall growth rate of industrial production was also unstable from year to year (6.9%—target; actuals 3.9%). The output of commercial energy, measured in terms of coal replacement, increased at an annual rate of 12% over the Sixth Plan. An outstanding feature of this growth was the increase in crude oil production from 11.8m tonnes in 1979-80 to 29m tonnes in 1984-85. Gross investment in the Sixth Plan amounted to about Rs 1,43,000 crores (in 1979-80 prices) against the Sixth Plan expectation of Rs 1,59,000 crores. As for domestic savings, the Plan had anticipated a gross savings rate of 24.5% in 1984-85, against which the actual rate is likely to be 23.3%.

The Seventh Plan proposes to finance a public sector plan of Rs 1,80,000 crores, which it proposes to cover through Rs 23,500 crores in additional taxation from the Centre and the states, besides existing taxation levels; deficit financing for Rs 14,000 crores and a net inflow of foreign funds of Rs 18,000 crores. The draft Plan estimates thus imply reversal of the thrust of this year's budget, particularly in regard to direct taxes. The Plan, for instance, stipulates that there would be additional resource mobilisation of Rs 2,000 crores through direct taxes. This year's budget, apart from abolition of estate duty, gave a relief of Rs 197 crores, in income-tax.

The financial allocations have been increased from Rs 7,444 crores to Rs 10,474 crores for agriculture; from Rs 6,114 crores to Rs 8,944 crores for rural development; from Rs 1,571 crores to Rs 2,945 crores for special area programme;

from Rs 10,925 crores to Rs 16,979 crores for irrigation and flood control; from Rs 31,061 crores to Rs 55,021 crores for energy; from Rs 17,176 crores to Rs 23,941 crores for industry and minerals; from Rs 14,024 crores to Rs 29,971 crores for transport; from Rs 3,493 crores to Rs 6,372 crores for telecommunication, broadcasting and TV; from Rs 1,158 crores to Rs 2,306 crores for science and technology; and from Rs 15,800 crores to Rs 28,360 crores for social services.

Interestingly, the Plan allocation for civil aviation, which is looked after by the Prime Minister, has been cut from Rs 931 crores in the Sixth Plan to Rs 758 crores in the Seventh Plan. The allocation for industry is still much higher than that for agriculture; evidently, the government does not intend to change the thrust of the previous plans which concentrated mainly on heavy industry. The only exception was the First Plan which was agriculture-oriented and, suggestively, was the only Plan to have been successfully implemented. Energy and social services have also got a big rise in allocation. The high allocation for energy is understandable. A rapid increase in the production of domestic crude decreased the import to consumption ratio for crude oil and petroleum products from about 73% in 1979-80 to 34% in 1984-85. Had the import ratio for these two commodities remained at the 1979-80 levels, the import bill in 1984-85 would have been higher by about Rs 4,000 crores, and posed a virtually unsurmountable problem for the balance of payments. In accordance with Rajiv Gandhi's aims to take the country to the 21st century, the Plan envisages a rapid expansion in the production of computer telecommunication equipment, process control systems and consumer items like television sets. The overall strategy for the Seventh Plan lays special emphasis on (a) improvement in infrastructural facilities particularly power (b) greater attention, modernisation and maintenance of assets (c) upgradation of technology (d) improvement in productivity (e) reduction in cost and improved competitiveness (f) introduction of new products and (g) a special effort at accelerated development in selected industries in which the country has comparative advantage.

TAXATION POLICY

Taxation policy has often, in world politics, proved to be a statesman's Waterloo as happened in the Reagan-Mondale battle for the American Presidency. For years, our taxation policy meant only one thing—tax to the utmost. But, the winds of change that blew the present government into power,

have reached our taxation policy-makers as well and they are calling a new tune—“Tax less, collect more”.

Although the fiscal policy is only to be decided upon during the winter session of the Parliament, the Finance Minister, V. P. Singh's pronouncements have been clear enough about the intended direction of the policy. The proportionate share of indirect taxes in the Central Budget is proposed to be reduced progressively. A policy on administered prices will be formulated to see that the price rise in some vital areas like coal and power do not have a cumulative impact.

The government also proposes to introduce structural changes in excise tariffs. Though it will concentrate, as earlier, on 30-odd items that account for the bulk of the excise revenue, it will eventually do away with the residual items under which all unspecified manufacturers attract excise duty at a flat rate which currently stands at 12%. Changes will be made in customs tariff to “harmonise” import and export duties with excise. Tribunals will be set up to decide disputes about the classification of goods under customs and excise tariffs. Market prices at home and overseas will be computerised to check under and over-invoicing.

Progressive reduction will be made in the preferential treatment being given to small-scale units so that the tendency towards fragmentation of capacity is arrested and all manufacturers have an incentive to achieve economies of scale. Apparently, many associations of small entrepreneurs have indicated to the government that they are quite prepared to forego “positive discrimination” in tax rates provided they are freed from the harassment of elaborate accounting and frequent visits by greedy excise inspectors.

But the most important change will be in cuts on direct taxation as the Budget has already indicated. Then, the finance minister had given away Rs 200 crores in income-taxes due to various tax-cuts. Yet, the first quarter's advance tax returns showed that tax collections had gone up by 50% in Delhi and the northern region. In Bombay, also, which accounts for the bulk of the income-tax collections in the country, collections rose by 44%. Thus, the Delhi trend is clearly a nationwide one and there is no reason to hope that the income-tax will yield about 40% more than it did last year. Obviously, the lesson has gone home and V.P. Singh will apparently be in a mood to give more tax concessions.

This will bring in several gains to the economy. Since most of the additional Rs 10,000 crores that will have to be declared to induce this spurt, will not come out of what was previously “black

consumption but ‘black savings’, it will be re-invested in legitimate channels of savings and investment. A great deal of money has already moved into the share market, for, between budget day and the end of August, *The Economic Times* share price index rose by 60% and the RBI's index by 55%. Thus, there is roughly 60% more money invested in existing shares than there was six months ago.

The government can also take advantage of this sudden increase in supply of legitimate savings to lower the bank rate, and thus bring down the entire structure of interest rates by 1 to 2%. Since the Central and state governments are the biggest borrowers, for every 1% fall in their interest rate, the Central budget deficit will decline by Rs 1,400 crores while that of the states will fall by Rs 400 to 450 crores.

On the assumption that an additional Rs 6,000 crores to Rs 7,000 crores will be available in the ‘white’ economy, over the five years of the Seventh Plan, between Rs 35,000 and Rs 50,000 crores of additional resources will become available to the government and the private sector. Thus, unless this money is frittered away in non-developmental expenditure, the much feared resource crises the Seventh Plan is faced with may already be a thing of the past.

Reforms could be in the area of capital gains tax. The area of approved securities should be substantially increased and should include equity shares also. The present time limit of three years if invested in the construction of houses should be increased or totally withdrawn in case of co-operative housing.

Exemption in income-tax should be given to the whole amount invested in housing, including housing schemes.

Dividend tax could also be cancelled altogether as it involves double taxation because dividends are declared out of the taxed profits. Again, since the large share holders are financial institutions which hold over 25% of the total shares of Indian companies, the tax is actually paid by them. The profitability of the financial institutions is thus eroded. The withdrawal of the tax would not only increase the profitability of the institutions but also boost the capital market. The private sector will have to raise vast resources from the capital market and this can be possible only if the capital market is kept buoyant.

Finally, institutions providing finance for the corporate sector may be allowed to accept deposits at a nominal rate of 5% where the parties do not want questions to be raised on the source of their funds. This will enable black money to be channelised into the white sector.

S.I.

THE UN STORY

Much talk and less work has reduced the UN to an ineffective organisation which in the 40 years of its existence, has failed in its primary task of maintaining world peace. Yet, few would like to see the UN disbanded. A close look at the happenings in the major international forum.

40 YEARS OF UN

A delegate to the San Francisco conference, John Foster Dulles said that the UN Charter could be "a greater Magna Carta". Forty years later an Indian diplomat, Rikhi Jaipal, remarked that it is fast becoming "a poor nations club that has seen better days." One of the main criticisms against the UN that there is too much talk and very little action conducted within its halls, is, to a large extent, justified. Although UN peace keeping forces do serve as a buffer between potential combatants on a few global hotspots and multinational UN forces patrol the Golan Heights, southern Lebanon and the no-mans land between Greek and Turkish Cyprus, they have failed to cushion nations from attack on several occasions. This was especially true of the infamous occasion when the UN pulled its troops out of the river peninsula at the instance of a six-day war between Egypt and Israel in 1967. Further, the superpowers have repeatedly brushed aside the UN, especially when they waged their bloody wars in Vietnam and Afghanistan. In fact since the Korean conflict of the early '50s, the UN has never forcefully intervened in a war to restore peace.

Part of the responsibility for the failure of the UN as a peace-keeper lies with the Security Council, especially the superpowers. In the early days, the UN was dominated by the Western powers and they shaped the Security Council according to their needs. Each of the five permanent members has a veto which has created impossible bottlenecks in resolving conflicts. The US dominated the UN in the first 15 years of its existence and hence it found it unnecessary to use its veto power frequently. Thus it used it only once in the first 25 years, and second time in 1972 in favour of Israel. But, in the last 10 years, it has used it as many as 28 times in favour of Israel, South Africa and its other friends. Russia has used its veto power 27 times, France and Britain four times each, Nationalist China once and the People's Republic of China, which replaced Nationalist China in the Security

Council in 1971, once. While some political thinkers feel that the veto power is useful because it has helped to preserve the UN, it cannot be denied that it has often tied the hands of the UN, since the responsibility of peace keeping lies with the Allies.

However, one must not ignore the achievements of the UN in other fields. It is said that the UN decolonisation committee has become redundant and uses up too much of valuable funds. The membership of the UN has mushroomed from 50 to 159 and more than 70 of the present members were territories under colonial rule when the UN was founded. The UN actively helped a number of them gain independence, viz. (British) Togoland, (British) Camerouns (Dutch), Nao Guinea, Zimbabwe, etc. It has also helped to settle some international crises like the Cyprus crisis of 1976.

But the real achievements of the UN lie not in the winding debates at the General Assembly, but in its many far-flung agencies which deal with important matters, like the collection of weather statistics (by the World Meteorological Organisation) or the standardisation of international mail delivery (by the Universal Postal Union). Other agencies are directly involved in saving lives. The UN Office of the High Commissioner for Refugees claims that it has helped place some 25m stateless people. The World Health Organisation (WHO) has eradicated small pox from the planet and considerably reduced malaria in many tropical countries. The UNICEF and WHO have also revolutionised child health care in developing countries. The Integrated Child Development Services (ICDS), for instance, has succeeded in making a dent in the estimated 3m deaths of children in India from diarrhoea and childhood diseases. The UN also helps countries stricken by natural disasters. For example the Office of Emergency Operations today spearheads massive famine relief efforts in Africa. The World Food Programme sent Rs 5.3 crores worth of food aid to victims of drought and other calamities in Ghaui, Mauritania, Indonesia and Sri Lanka, in 1983. At another level, the UN Development Programme (UNDP) has given

assistance, worth billions of dollars to developing countries, since 1948. In fact, India should be grateful to the UN for its agricultural revolution. The UN has done much good work in areas of women's rights, human rights, food, water, environment, etc. There are some who even feel that the UN should keep international politics totally out of its arena and concentrate on matters involving the day to day development problems of humanity. However, even in such fields the UN would have succeeded more had the UN funds reached their intended beneficiaries.

This year, on the 40th anniversary of the UN (see *Current Events*), the UN is under fire from all sides. The US has demanded weighing of voting in the General Assembly in accordance with the financial contribution of each member country, and has threatened to cut back its share of the UN's annual \$ 806m budget from 25% to 20% if the UN did not agree to do so by the end of 1986. The Soviet Union, on its part, has refused to pay for any peacekeeping forces. Criticism is also levelled at its expensive bureaucracy.

However, despite its many failings, public opinion polls around the world show that while many people are disappointed by the UN's performance, few would like to see it disbanded. What is perhaps required to make the organisation more effective is less talk on differences between nations and more work towards the resolution of conflicts. S K & S I.

UN AT WORK

While presenting his annual report to the General Assembly, on Sept 5, 1985, the UN Secretary-General, Javier Perez de Cuellar, said, "We face today a world of almost infinite promise which is also a world of potentially terminal danger." It was precisely to avoid such danger and create a world of such promise that the UN was formed 40 years ago.

The name United Nations (UN) was adopted during World War II to denote the nations allied in opposition to the axis

powers—Germany, Italy and Japan—and later adopted as the name of the postwar world organisation. Conceived by President Franklin D. Roosevelt, the term first achieved worldwide prominence when the Declaration of the United Nations was signed by 26 states on Jan 1, 1942, setting forth the war aims of the allied powers.

The UN Charter

The first major step towards the formulation of a permanent organisation was taken at the Dumbarton Oaks conference—a meeting of diplomatic experts of the big four powers (USA, UK, USSR, China)—held from Aug 21 to Oct 7, 1944.

The Dumbarton Oaks proposals, modified by proposals presented at the Yalta conference, formed the basis of negotiations at the UN Conference of International Organisation (UNICO), convened at San Francisco on Apr 25, 1945, and drafted the Charter of the UN. The Charter was signed on June 26, 1945, by the representatives of the 50 countries; Poland, not represented at the conference, signed later and became one of the 51 original member states. The UN officially came into existence on Oct 24, 1945, when the Charter had been ratified by a majority of the signatories. This day is celebrated as UN Day throughout the world.

The signing of the Charter signalled the repudiation of wars, renewal of faith in peace and a desperate bid by mankind to survive. Less significantly, the San Francisco conference was the first major international conference for two millenniums without being dominated by Europe.

The aims of the UN, as set forth in the Charter, are: to maintain international peace and security; to develop friendly relations among nations; to co-operate internationally in solving international economic, social, cultural and humanitarian problems and in promoting respect for human rights and fundamental freedoms; to be a centre for harmonising the actions of nations in attaining these common ends.

The UN acts in accordance with the following principles: all member states are sovereign and equal; all member states shall fulfill in good faith their obligations under the Charter; all members shall settle their international disputes by peaceful means and shall refrain from the threat or use of force against any state; and all members shall assist the UN in any action it takes in accordance with the Charter.

It was only in 1946 that New York was chosen as the UN headquarters. The first site of the UN Secretariat was at Church House in London, and the first General Assembly meeting was at Central Hall,

Westminster. Membership to the UN is open to all peace-loving nations which accept the obligations of the UN Charter. As of January, 1985, its membership stands at 159. Under the Charter, the official languages of the UN are Chinese, English, French, Russian and Spanish. Arabic was added as the official language of the General Assembly, the Security Council and the Economic and Social Council.

The Charter established six principal organs of the UN: the General Assembly, the Security Council, the Economic and Social Council, the Trusteeship Council, the International Court of Justice and the Secretariat. Except the Court, which is located at The Hague, in the Netherlands, all the others are based at the UN headquarters in New York.

General Assembly

Functioning almost like a 'World Parliament', the General Assembly is the deliberative organ of the UN where all the members have one vote. Decisions on ordinary matters are taken by a simple majority, while those on important questions like recommendations on peace and security, admission of new members and budgetary matters, require a two-third majority. The Assembly holds its regular session from mid-September to mid-December each year. Special or emergency sessions are held when necessary. Even when not in session its work goes on in special committees concerned with specific topics like the First Committee (disarmament and related international security matters); special Political Committee; Second Committee (economic and financial matters); Third Committee (social, humanitarian and cultural matters); Fourth Committee (decolonisation matters); Fifth Committee (administrative and budgetary matters); and Sixth Committee (legal matters). Although the Assembly has no power to compel action by any government, its recommendations carry the weight of world opinion.

Security Council

The organ to which the Charter gives primary responsibility for maintaining peace and security is the Security Council—the only inter-governmental body of the UN which is permanently in session. The Council has 15 members, of which China, France, the USSR, UK and the USA are permanent members. The other 10 are elected by the Assembly for two-year terms. Except in votes on procedural questions, a decision cannot be taken if one of the permanent members vetoes it. In case of a threat to peace the Council usually first asks the parties to negotiate and sometimes the Secretary-General is requested to investigate and report on the

situation. It may itself undertake investigation and mediation or set forth principles for a settlement. The Council exercises the trusteeship functions of the United Nations in "strategic areas". The duties of the Council also include recommendations to the Assembly of a candidate for the post of Secretary-General and the admission of new members to the UN.

Other Organs

Working under the authority of the General Assembly, the Economic and Social Council (which has 54 members) co-ordinates the economic and social affairs of the UN and the related specialised agencies and institutions. The Council's duties include making recommendations and guiding activities aimed at spurring world trade, encouraging economic growth of the developing countries, promoting the observance of human rights, improving the status of women, ending discrimination against minorities, securing the better use of natural resources and energy, spreading the benefits of science and technology, administering UN aid programmes, and fostering world co-operation in areas such as better housing, family planning or prevention of crime.

The Trusteeship Council was established to ensure that governments responsible for the administration of Trust Territories took adequate steps to prepare them for self-government or independence. The Council, which now has five members, is the only organ whose activities have diminished over the years.

The International Court of Justice is the principal judicial organ of the UN. It consists of 15 judges elected by the General Assembly and the Security Council. Only states may be parties in contentious cases brought before the Court. But a State can also refuse to abide by the Court's decision.

The Secretariat works for the other organs of the UN and administers the day-to-day programmes and policies laid down by them. Its head, the Secretary-General, has many functions one of which is to bring to the attention of the Security Council any matter which, in his opinion, threatens international peace and security.

Decades

Beginning in 1960, the General Assembly has proclaimed three successive United Nations Development Decades to aid developing countries. To achieve the aims set forth during these decades, the UN set up a number of specialised agencies. The United Nations Development Programme (UNDP), an amalgamation of the Expanded Programme (1949) and the Special Fund (1959), is the major channel of funding for the specialised agencies in the UN system. The UNDP supports some 5,000 projects each year in more than 150 countries and territories; the volume

of field development work being carried out under its auspices being over \$ 1.7b annually, though member countries pay over half the costs involved.

The first United Nations Conference on Trade and Development (UNCTAD), held in Geneva in 1964, led to the establishment of UNCTAD, as a permanent organ of the General Assembly in December the same year. UNCTAD negotiates and adopts multilateral legal instruments in the field of international trade. To deal with perennial problems of low and erratic prices of raw materials in world trade on which most developing countries depend heavily for export earnings, UNCTAD adopted the Integrated Programme for Commodities in 1976, an agreement involving specific commodities—natural rubber (1979), cocoa (1980) and tin (1981). Other multilateral agreements include the Convention on a Code of Conduct for Linear Conferences (1974); the Set of Multilaterally Agreed Equitable Principles and Rules for the Control of Restrictive Business Practices (1980); and the United Nations Convention on International Multimodal Transport of Goods (1980).

The United Nations Industrial Development Organisation (UNIDO) was established in 1967, to promote and accelerate the industrialisation of the developing countries and co-ordinate all UN activities in this field.

In a 1952 resolution, the General Assembly had declared that developing countries had "the right to determine freely the use of their natural resources." Subsequently, the Economic and Social Council established the Committee on Natural Resources in 1970 followed by the establishment of the United Nations Revolving Fund for Natural Resources Exploration in 1973. When petroleum prices shot up in the 1970s and the world began to realise that known supplies of this precious commodity would not last forever, attention was focussed on new and renewable sources of energy. This led to the United Nations Conference on New and Renewable Sources of Energy, in Nairobi in August 1981.

Environment

The United Nations Environment Program, created in 1972 monitors significant changes in the environment and encourages, and co-ordinates sound environmental practices. Current UNDP projects deal with marine pollution in the Mediterranean, the Kuwait region, the Red Sea, and the Gulf of Aden, the Wider Caribbean, East, West and Central Africa, the East Asian Seas and the South-East and South-West Pacific; stopping the spread of deserts in the Sudano-Sahelian region of Africa; and the ecology of rural and urban settlements, among others.

Located in Nairobi, is HABITAT, the UN centre concerned with housing, settlements and related environmental planning. Its projects cover such areas as national settlement policies and programmes, rural and urban housing and infrastructure development, slum upgrading and sites-and-services schemes, etc.

The World Food Council seeks to promote the establishment of an effective system of world food security through more open trade and assurances of continuity of food supplies for developing countries. Other food aid programmes include the World Food Programme, which it sponsors jointly with FAO and the International Fund for Agricultural Development which finances food production in developing countries.

Population

With the world's population increasing by leaps and bounds, the United Nations turned its attention to the problem and formed the United Nations Funds for Population Activities (UNFPA). UNFPA is now the largest internationally-funded source of assistance to population programmes in developing countries.

Ever since the General Assembly convened the World Conference of the International Women's Year in Mexico in 1975, international recognition of the important role women play in development has increased. 1975 was declared the International Women's Year, focussing on the three-fold objective of equality, development and peace.

UNICEF

The United Nations International Children's Emergency Fund (UNICEF) was created by the General Assembly in 1946, to meet the emergency needs of children in post-war Europe and China for food, drugs and clothing. In 1950, the Assembly changed the main emphasis of the fund's mandate to programmes of long-range benefit to children of developing countries. Three years later, the Assembly decided that UNICEF should continue this work indefinitely; its name was changed to the United Nations Children's Fund, but the well-known acronym UNICEF was retained. Under its Basic Services strategy, adopted in 1976, UNICEF assists governments to plan, develop and extend low-cost community-based services in the inter-related fields of maternal and child health, applied nutrition, clean water and sanitation, formal and non-formal education, responsible parenthood and supporting services for women and girls. When the General Assembly designated 1979 as the International Year of the Child, UNICEF served as the 'lead agency', co-ordinating the activities of the United Nations system.

The UN's scope covers various other fields as well—youth and development

(1985 has been proclaimed International Youth Year); the elderly and the aging; disabled persons; Human Rights; refugees—the United Nations High Commissioner for Refugees (UNHCR) was awarded the Nobel Peace Prize in 1954 and 1981; international control of narcotic drugs and psychotropic substances; prevention of crime and treatment of offenders; training and research, through the United Nations Institute for Training and Research (UNITAR); decolonisation; and international law.

Following World War II, the UN became a kind of 'roof organisation' for the major enterprises in systematic international co-operation. Almost 15 of the agencies are known as 'specialized agencies' who report to the Economic and Social Council annually. They are: the International Labour Organisation (ILO), Food and Agriculture Organisation of the United Nations (FAO), the United Nations Educational, Scientific and Cultural Organisation (UNESCO), the World Health Organisation (WHO), World Bank/International Bank for Reconstruction and Development (IBRD), International Development Association (IDA), International Finance Corporation (IFC), International Monetary Fund (IMF), International Civil Aviation Organisation (ICAO), Universal Postal Union (UPU), International Telecommunication Union (ITU), World Meteorological Organisation (WMO), International Maritime Organisation (IMO), World Intellectual Property Organisation (WIPO), International Fund for Agricultural Development (IFAD), The International Atomic Energy Agency (IAEA), established in 1957, reports to the General Assembly. The General Agreement on Tariffs and Trade (GATT) is a multilateral agreement which lays down rules for international trade.

LUCKY OR UNLUCKY?

This is the most ominous of all numbers, and plays an important part in the superstitions of the world.

Hotels and buildings avoid it in the marking of their rooms and floors. The source of this superstition is said to have been the Last Supper, when 13 diners sat down at the table and one of them deceived Christ.

In American history the number seems to have lacked any sinister connotations. The history of USA started with 13 colonies. The US flag has 13 stars and 13 stripes.

The German composer Richard Wagner considered the number lucky. His name contained 13 letters and he was born in 1813. He left school at the age of 13, loved 13 women and died on Feb 13, 1883.

The famous cricket player Gurusappa Viswanath considers the number very unlucky. The number is said to have destroyed his career—he would always lose his wicket when his score stood at 13.

INSTITUTIONS NATIONAL DEFENCE COLLEGE

BY JYOTSNA SHARMA

Starting a new series on the premier institutions of India. Some well-known and some not-so-well-known. Information-packed to increase your awareness about your country. This time featuring the National Defence College—the only one of its kind in India and ranked among the best in the world.

Winning a war requires not only great understanding and co-operation among the three defence services of a nation, viz, the Army, the Navy and the Air Force, but also interaction with civil authorities. World War I taught the UK this invaluable lesson. And, in 1927, the Imperial Defence College or the Royal College of Defence Studies, as it is now called, was established in London where for the first time ever, senior civilian and military officers came together to jointly analyse the complex problems of national security. Soon the idea was adopted by the US and Canada and 25 years ago, by India too.

On Apr 27, 1960, the National Defence College (NDC), located at New Delhi, was inaugurated by the then PM Jawaharlal Nehru. Ranked among the world's best defence institutions today, the NDC is undoubtedly the highest seat of learning for future policy makers of the country. The college conducts a ten-and-a-half-month course, annually, from the first week of January to the third week of November. The object of the course is to encourage free exchange of ideas in an informal and relaxed atmosphere so as to broaden the horizons of the 'student' officers as well as their understanding of the various factors—economic, political, military, scientific and organisational—

involved in the planning of national strategy. It also widens their global outlook.

Says a senior member of the faculty: "The course provides the students with an enormous opportunity to reflect and brings about a refinement of their overall intellectual build up." The atmosphere, too, he points out, is particularly conducive to self-learning as each man is free to express his views and ideas freely. More importantly there is no fear of evaluation.

Course Content

The syllabus of the course consists of a study of the socio-political and economic developments of the country, the major powers of the world and India's neighbours in particular, their policies and the problems of India's defence and security. All this culminates in the formation of a national strategy for the country in the coming decade. The faculty does not have a direct involvement in teaching. It, however, plans the study with respect to its structure, content, goals and objectives and accordingly arranges lectures by experts and field tours. The guest lecture programmes form a particularly important part of the course. For the subject under study the best available authority on the subject is invited to deliver a lecture following which the students have an informal question-answer session with him which encourages free and frank exchange of ideas. This also helps them fortify, modify or alter their views.

A batch of 60 officers, including 12 foreigners, attend the course every year. Indian officers—both civilian and defence—are nominated for the course. Only 'high fliers with potential to go places' and having brilliant service records are selected for the course. The foreign students are taken on an exchange basis. The students are divided into five Integrated Analysis Groups (IAG) of 12 members each. Each IAG undertakes a total of 11 studies of which three relate to the Indian environment, social and political issues, economy, science and technology while seven relate to the international environment affecting India's security. Each IAG prepares a paper at the end of each study in which it gives its recommendations. As an alumni member of the NDC puts it: "The focus in such a study is on 'what should have been done.' All these studies lead to the final and most important study of national

security. The papers presented by the IAGs are circulated among them and discussed at length whereupon a general consensus is evolved. For each study the composition of the IAGs changes so that every officer gets an opportunity to work with all his fellow students. Field tours are conducted, too, including visits to industrial complexes, frontier areas, service establishments and ten neighbouring countries. At the end of each session each officer is required to submit a thesis on any particular aspect of a national or international problem in which he is particularly interested.

Foreign Students

Interaction among high ranking officials of various countries goes a long way in creating better relations among them. Also the problems of neighbouring countries are similar to some extent. Thereby they can learn from each other's experiences.

The Indian officers, too, learn from their foreign counterparts. This interaction with officers of other countries gives them a better idea of their standing vis-a-vis the developed and developing nations, and their geo-strategic location.

General Reactions

According to an alumni member who is currently a joint secretary with the Government of India: "The course is essentially designed to widen your outlook. This kind of exposure is beneficial as you can visualise exactly where your work stands in the wider framework of things. Also you get a comprehensive overview of the state of the nation from various perspectives." Another alumni member echoes the same sentiment, and adds, "Exposure to diametrically opposite conditions is made possible through students exchange."

The NDC course is undoubtedly of tremendous value to the top brass of any country. PM Rajiv Gandhi said in his message to the college on the occasion of its silver jubilee: "The defence of the country is not the responsibility of the armed forces alone.... It is also important that senior defence officers and senior officers of our civil services get an opportunity, on the eve of their induction into the highest levels of their respective careers, to interact with each other so as to broaden and deepen their understanding and perceptions. The courses conducted by the National Defence College enable this to happen." As Admiral R.H. Tahiliani, Chief of Naval Staff, puts it "Some of the top decision-makers both in the informed fraternity and amongst the civilian-officers must continue to pass through its (NDC) portals and get an insight into all the complex factors which govern national security in its broadest sense."

LETTER-WRITING

BY RAGHU BHATNAGAR & RAJUL BHARGAVA, University of Rajasthan, Jaipur

Handle with care! That's what the sensitive business of letter-writing is all about. The 'whys' and the 'hows' of this subtle exercise. For the Bank (PO) and other forthcoming exams.

Both individuals and organisations have to deal with other individuals and organisations. In some cases direct contact is possible. In most, indirect means have to be employed, one of which is correspondence. Three factors play a crucial role in any correspondence. They are the subject/topic, the audience and the purpose. Of these the subject or the topic is given. Conscious care has to be taken of the other two factors. The correspondent must take into account the nature of the audience, their values, knowledge, and maturity. Above all, he must pay proper heed to their ego or self-esteem.

The most neutral letter is one that merely seeks to convey information. However, more often than not the purpose of writing is to make the reader agree with the writer's opinion, or take some action, or both. Nothing will defeat this purpose more than the assumption by the writer that what matters most is his own personal perspective without paying proper attention to that of the reader.

Closely related to the concepts of subject, audience and purpose is the concept of tone, which refers to the writer's attitude towards his subject and audience/readers. The tone of a piece of writing is revealed through the writer's style and is usually indicated by labels such as formal, casual, serious, solemn, humorous, ironic, contemptuous, condescending and so on.

How important the above factors are in good correspondence is best illustrated by taking two examples, the first a piece of bad writing and the second that of good

First Version

Sept 10, 1985

Mrs Kavita Dey
Editor, *Monthly Digest*
22, Nizamuddin East
New Delhi

Dear Mrs Dey,

The coverage of youth activities in your

magazine is inexcusably lousy. During the past four months youth programmes both at the centre and state levels have barely been mentioned. This is simply scandalous. Your special correspondent doing write-ups on youth activities is a half-witted bore.

Do I have to remind you that some 60% of your readership consists of people aged between 20 and 25? How would you feel if they cancelled their subscription to the *Monthly Digest*?

Yours sincerely,
(Signature)
Ravi Verma

(A Young Subscriber)

Second Version

Sept 10, 1985

Mrs Kavita Dey
Editor, *Monthly Digest*
22, Nizamuddin East
New Delhi
Dear Mrs Dey,

As a young admirer of your magazine, *Monthly Digest*, I have been its subscriber ever since its inception. However, of late I have noticed a minor defect, which is of course no reflection on the otherwise excellent overall quality of the magazine. There has been a steady increase in youth activities in the country but for some inexplicable reason their coverage in your esteemed magazine has lost both verve and volume. I am sure this is an unintended lapse and no policy decision. Its removal will win you new subscribers.

Yours sincerely,
(Signature)
Ravi Verma

An angry, offensive and insulting tone is bound to get a hostile reaction. Such will be the fate of the first version. On the other hand the second version will result in positive action and may even earn the gratitude of the editor. The difference between the two versions is essentially that of tone. If effective communication is the transferring of a thought or a message to another party so that it can be understood and acted upon, then both effectiveness and communicability will overwhelmingly depend upon the tone of the communication.

Let us now consider some of the points in writing effective letters. Since there is no face to face contact in letter-writing, utmost care must be taken to avoid caus-

ing confusion or misunderstanding by making the letters as clear and concise as possible.

Clarity belongs as much to thoughts as to expression. First of all the writer of a letter should be clear about what he wants to convey. Confused thinking results in lack of purpose and it in turn takes away from the effectiveness of communication. Similarly, imprecise expression caused by bad syntax, wrong choice of words and excessive length of sentences cause misunderstanding and failure to get the desired response.

For being concise the writer should be to-the-point and logical. He must also avoid all padding. The last quality requires both coherence and orderliness. The basic rules of good paragraph-writing must be followed in writing letters too. Each paragraph should have unity and proper sequencing of ideas with smooth inter-sentence transitions.

Courtesy and politeness are as much virtues of good correspondence as of good behaviour. Part of courtesy lies in making letters easy to deal with. This is best ensured by giving a reference and a subject, wherever necessary. Many foreign firms and organisations have the normal practice of printing *your reference* and *our reference* on their letter heads, usually below the date line:

Sept 14, 1985

Your ref.

Our ref.

As for the subject, it can be typed or written either above the salutation or between the salutation and the body of the letter as follows:

Suburban water supply—need for revamping
Dear Sir,
It is an open secret that suburban...
or

Dear Sir,
Suburban water supply—need for revamping.
It is an open secret that suburban...

We may now consider matters of form and arrangement first in relation to personal and then business letters, though quite a few points are common to both.

PERSONAL LETTERS

The Address

It is usual to write full postal address of the sender in the top right hand corner of the note paper.

Narula House
24, Tilak Marg
Civil Lines
Bombay 400 039

The Date

The date can be written in several ways, e.g.

Thursday, 12th Sept. 1985

12th Sept. 1985

Sept 12th, 1985

Sept 12, 1985

However, for the sake of consistency any one of the above ways should be selected and adhered to. A full stop at the end of the date is not necessary and the date is always written below the sender's address.

The Salutation

All personal letters usually begin with a 'Dear' followed by the receiver's name. The actual form of the name depends upon the level of familiarity or formality which exists between the sender and the receiver. The tendency to address a person only by his surname without his title (i.e. Mr. Mrs. Miss, Ms) must be avoided.

So far as punctuation after the salutation is concerned, the British practice—which has been adopted here—is to place a comma, whereas the American practice is to place a colon, e.g.

Dear Miss Saxena, (British)

Dear Miss Saxena: (American)

A good convention to follow is to use small *f, m, s,* and *b* in father, mother, sister, and brother when they are used as kinship terms and to use capital letters when the terms refer to members of a Christian religious order.

The Conclusion

Personal letters generally end with a short sentence like

I wish you a really nice holiday. Yours sincerely,

This is a perfectly good ending. However, trouble arises when a letter ends with a sentence beginning with a participle and two conventions are not observed—placing a comma at the end of the sentence and adding the words 'I remain' with another comma after them. Thus it will be right to write:

Wishing you a really nice holiday, I remain,
Yours sincerely,

The Complimentary Close

The most common ending used in a personal letter is 'Yours sincerely', or 'Sincerely yours.' However, depending upon the closeness and intimacy of the relationship between the addresser and the addressee the following endings are also in order.

'Yours,' 'Yours as ever,' 'Yours affectionately.'

FORMAL LETTERS

Address and Date

Their layout is the same as that of personal letters.

Addressee's Address

Both in formal and business letters the address of the addressee is written on the left side of the page, just above the salutation but below the level of the date as follows

127 Grand Road
Star Avenue
Bombay 400 029
Sept 15, 1985

Messrs Atma Ram & Co.

37, Circular Road
Calcutta 700 019

Dear Sirs,

Some people prefer to write the addressee's address at the end of the letter on the left side of the page below the level of the signature. For example
I look forward to receiving your reply.

Yours faithfully,
R.A. Rahim

Messrs. Atma Ram & Co.

37, Circular Road
Calcutta-700 019.

The Salutation

Dear Sir where name of the addressee is not known

Dear Madam

Dear Mr/Mrs/Miss/Ms Purohit

Dear Sirs (when addressed to a firm, i.e., a partnership).

BUSINESS LETTERS

The Address

There is no difference in the layout of the address and the date, except that most firms and business houses have their own printed letterheads which give the name and address of the firm/business house. If that is the case the general layout of the upper half of the letter will take the following form:

Telegram: Bhavisu
BHARTIYA VIDYALAYA SUPPLIERS
Telephone: 620111
3, Garden Colony, Chennanagar
Madras 600 021.

September 14, 1985

Our Ref: BYS/GM/502

Your Ref: RB/PS/193

The Addressee's Address

Here too the same practice is observed as described earlier in the case of formal letters. But in some cases there may be an extra attention line, which means that the letter is for the attention of a particular person. The attention line occurs above the addressee's address:

For the attention of Mr V.M. Sinha

Messrs Atma Ram & Co.,
37, Circular Road
Calcutta-700 019.

The Reference Line

Two positions are possible in this case. The first has been given earlier while discussing the address on the letterhead of a business letter. The other may be on the left of the page opposite the date line.

The Salutation

This has been dealt with under formal

letters. As stated there, the convention is 'Dear Sirs' when addressed to a partner and 'Dear Sir/Madam' in other cases.

The Subject Line

It was said in the beginning that it is necessary to mention the subject at the head of a letter. The subject line can occur either just above the salutation or between the salutation and the body of the letter.

Our order No. 529 for staplers

Dear Sirs,

or

Dear Sirs,

Our order No 529 for staplers

The Complimentary Close

This too is the same as informal letters. One fact worth remembering, however, is that if the letter has been written on behalf of the firm/partnership, the name of the firm must be typed between the complimentary close (usually, Yours faithfully) and the signature:

Yours faithfully,
Messrs Atma Ram & Co
(Signature)
V.M. Sinha, Manager

Enclosures

An indication of the enclosure(s), if any, is given on the letter itself on the left side at the bottom. Both 'Encl' and 'Enc' can be used as abbreviations. One may either give a description of the enclosure(s) or its/their number.

The Address on the Envelope

The address on the envelope should be written/typed as legibly and completely as possible. It is always desirable to mention the PIN or the Zip Code to facilitate delivery. The word 'Messrs' need not be put before the name of the firm when writing to a limited company. However, it must be put when writing to a partnership.

SUPER COMPUTER

Unbelievable feats by computers have become so frequent an occurrence in this high technology era that new breakthroughs in computer technology have ceased to astound. Twelve hundred pages of a multi-volume encyclopaedia per second and the new Series 39 mainframe computer was through with its entire contents in three minutes flat. Launched by the London-based International Computers Ltd (ICL), it is a combination of British computer design expertise and fibre optic technologies with the chip technology from Fujitsu of Japan.

Claimed to be the fastest in the world, the fibre optic system will enable the new computer to link users across the world. To top it all, despite its enormous computing power, the smallest unit occupies less than a cubic metre of space, and it is the first highpowered machine which can be used in an office without its own air-conditioning system.

MASTERING THE VOID-2

... with satellites. In this second and concluding part on them, an outline of their unimaginably multi-faceted, inter-linked systems. Plus two at-a-glance information-packed tables.

Communication System

The communication system in a space mission performs three primary functions, viz, telemetry, telecommand and tracking. The information gathered from the experiments, various auxiliary onboard instruments, as well as about the spacecraft functioning itself, is normally processed suitably and transmitted to a ground station via the satellite telemetry.

The telecommand system enables exercising control on the spacecraft from a ground station. Operations such as putting the spacecraft in different functional modes and correcting in-orbit anomalies are carried out using this system. The determination of the location of the satellite at different times during its orbital motion is made possible by the tracking system.

Attitude Control & Sensors System

Attitude control of a spacecraft is the orientation of the satellite fixed axes with respect to a desired reference frame, thereby providing the necessary alignment for the operation of payloads, sensors, antenna and even solar panels. The relevant information about the attitude is generated by a system of sensors that sense the directions of certain well known landmarks in space such as the sun, the earth's magnetic field, the infrared horizon

of the earth or some bright stars.

Once the design goals are laid down, there are at least four major elements in the design of a control system for a spacecraft. These include mission analysis, dynamic and reliability analysis, hardware implementation and finally testing and design evaluation.

In the mission analysis phase, the overall mission profile vis-a-vis the attitude control requirements are examined. The availability of the ground support facilities and the interfaces between the onboard and the ground systems are additional considerations in the mission analysis.

Dynamics analysis is carried out for various control modes, ensuring stability for all possible mass distributions and flexibilities as well as disturbances such as gravity gradient, magnetic, solar radiation, aerodynamic and those arising from the operation of the onboard hardware. Stability analysis is done for all possible modes including transition modes from one phase to another.

The implementation of an attitude control system has several approaches that

can be broadly classified as passive, semi-passive, active and hybrid.

The passive system controls the attitude of a spacecraft by employing elements that primarily depend on inertial torques or external forces for their operation. The simplest method of realising a passive stabilisation is by spinning the satellite about its axis of the greatest moment of inertia. To damp out the undesired nutational motion arising from magnetic, gravitational, solar and aerodynamic torques, a nutation damper is usually employed.

A third approach is to use the gravity gradient torques arising from small, but finite, difference in the strength of the earth's gravitational field which occurs over the finite spatial extent of the satellite.

There are three major types of active systems, cold gas, hydrazine or electrically-first system called the mass expulsion system cold gas, hydrazine or electrically-charged particles are expelled at definite velocities to produce the required control torque in the satellite. A set of 12 thrusters is normally employed, four about each axis to result in positive or negative torques.

The second approach to active control involves the use of reaction wheel sys-

tems. In the third approach, gyrotorquers are used. The fourth aspect of the control system implementation, is the testing and design evaluation.

Life Support Systems

The basic requirement of the life support system is to provide a controlled and physiologically acceptable environment for the crew during all phases of a mission which may include launch, orbital flight, entry and post landing. The system must provide for a pressurised shirt sleeve environment for pressure suit operation during normal and emergency conditions and for food, water and waste management functions. The system should also disperse the electronic equipment heat loads to keep the environment temperature within habitable limits. The parameters that constitute the principal design criteria are mission duration, operational modes, crew size, cabin total pressure, cabin leakage rates, power level of electrical and electronic equipment located in the cabin and type and weight of secondary power system, crew metabolic rates and environmental requirements are also important determinants in defining the life support system.

Satellite Payload

The setting of the goals for space mission enables it to proceed with the next step of identifying the payloads, the orbit choice and mission life. Depending on the type of satellite, the payloads are conceived keeping in view the application of the satellite

The payload interfacing, in general involves the following major elements. They include physical characteristics, resources required, environmental factors mission factors and the electromagnetic compatibility. The physical characteristics are the weight, volume and shape of the payload. Resources include the specification of size and skill of the crew, average and peak electrical power, data handling needs, heat rejection as well as control panel and display requirements. A variety of environmental factors are to be considered which include acceleration, shock vibration, etc. during launch and re-entry, and temperature conditions in the orbit phase. Safety considerations, pre-launch access, orbit characteristics, etc. come under the category of mission factors.

(To be continued)

CAREER COUNSELLING

BY G. J. UNNITHAN, Director, Students Advisory Bureau, University of Rajasthan

Please give me detailed information on the Indian Institute of Packaging, Bombay.

Jagdish, Maheshwari

The Head Office of the Indian Institute of Packaging is situated at E-2 Marol Industrial Estate, Andheri (East), Bombay-400 093. It is concerned with the improvement of the standards of packaging needed for the promotion of exports of consumer and industrial products. As part of its activities, the institute conducts a full-time, non-residential training programme of three months. Graduates in Science/Technology/Economics/Commerce/Mathematics/Engineering diploma holders preferably with three years' experience and sponsored by related industries, are eligible for the course. An exhaustive syllabus of 16 papers, practical orientation and project studies and reports are prescribed for the course.

In which university can I study a one-year M.A. course as a private candidate?

A.K. Sinha, Lucknow

The facility of studying privately or by correspondence, for a one-year M.A. course does not exist.

Kindly provide details about the courses conducted in the Patel Institute of Political Science and Tata Institute of Social Sciences and their addresses for further communication.

Debajit Bora, Guwahati

The Sardar Patel Institute of Economics and Social Research (Post Box 4062, Navrangpura, Ahmedabad-380 009) is basically a research institute and is affiliated to Gujarat University for the Ph.D. degree. The institute does not conduct post-graduate courses. The Tata School of Social Sciences (Deonar, Post Box 8313, Bombay-400 088) conducts an M.A. course in Social Work with specialisation in (i) Criminology & Correctional Administration; (ii) Family and Child Welfare; (iii) Medical and Psychiatric Social Work; (iv) Social Welfare Administration; (v) Urban and Rural Community Development and

an M.A. course in Personnel Management and Industrial Relations. The school also conducts a full-time post-graduate certificate course in research methodology, part-time certificate courses in (i) Hospital Administration and (ii) Personnel Management, besides M. Phil and Ph.D. courses. Admission to the M.A. course in Social Work is open to degree holders with 45%. For the M.A. course in Personnel Management, a bachelor's degree with 50% (in Science 55%) is required. Admissions are announced in May and the entrance test is held in June.

I have studied upto H.Sc. (Commerce) from Puna Board and am now employed in Bombay Municipal Corporation as a stenographer. I do not want to waste three years in pursuing a graduation course in Commerce. Is there any course for furthering my prospects in my job?

P. Sheela, Bombay

Many stenographers have risen to positions of eminence through hard work, understanding of office procedures and further training. Your prospects would be brighter if you could take a degree. If you have completed three years after your Higher Secondary examination, you can appear for all the papers of the degree exam in one year from Osmania University.

I am doing postgraduation (second year) in Agricultural Economics. What are the job opportunities open to me? Are there any scholarships available from foreign universities for research work?

Renuka Nair, Trichur

Agricultural Economics is an important applied subject in the Indian context. It covers farm management and production, resource economics, agricultural marketing and prices, finance, cooperation, policy administration, development and international economics. Employment will be mainly in public sector organisations/companies, government agricultural departments, co-operatives, banks and other financial institutions, research institutions and teaching, IES, IAS, etc. A limited number of scholarships for further research in India and abroad are available.

I would like to have the following information regarding the Civil Services. Is stammering a disability in the interview? Can separate mediums be

used for both the optionals in the main exam? Which language is used by the interview board?

Delbir Gehlaut, Delhi

(i) Stammering is a disability because the medical rules prescribe that speech should be without impediment. The medical board will consider this disability and certify whether or not it is likely to interfere with the efficient performance of the duties required of the candidate. (ii) Hindi or English may be used in the different papers, but only one medium is to be used in a particular paper. (iii) The preference of the candidate is often taken into account.

I would like to know whether being a 'B' or a 'C' certificate holder in the Naval Wing of the National Cadet Corps (NCC) helps in any way in the T.S. Rajendra examinations.

Manish Joshi, Nainital

No special concessions are given to NCC cadets at the time of admission to the T.S. Rajendra/DMET.

I am on the verge of getting an appointment in one of the government offices. Please tell me whether I can continue my studies as a second year student through correspondence course.

S. Gopal, Madras

Most universities have provision for admitting eligible students to the second year of undergraduate courses, and also correspondence courses. You may make enquiries from the directors of correspondence courses of the universities of Andhra (Waltair), Annamalai (Annamalainagar), Madras and Madurai respectively, which are in your neighbourhood.

NOTE TO READERS

Before rushing in your career problem, check if it can be solved by looking up our sections on *Careers* or *Career Counselling* in the earlier issues. Space is limited; the mail received staggering. Letters chosen are those of general interest or in particular cases where the information is hard to find or has not been published before. Many readers ask for a personal reply. Sorry, this is not possible. So please don't send postage or envelopes. Make your queries specific and brief. Send them to Career Counselling, Career & Competition Times, 10 Daryaganj, New Delhi-110 002. Your letters should be accompanied by the coupon.

A CLARIFICATION

In reply to the query of **Surindra Jain** (Guwahati) in *Career Counselling* (Aug. '85), it was mentioned that it is possible to do B.Com. while undergoing articlship of a Chartered Accountant. But effective from April 1985, to be eligible for the C.A. course, graduation is compulsory.

OH, CALCUTTA.

As the early shade of a misty dawn lifts its veil to embrace the first lights of the morning, the river Hooghly is set ablaze in a golden radiance. Suspended across its banks lies the amazing network of the Howrah Bridge—India's only cantilever bridge, and an engineering feat of the finest metal and mettle. The massive thoroughfare takes the visitor from the Howrah Station to the portals of a giant city waking to life amid twitters of swallows and din of traffic. It is Calcutta—the City of Palaces'.

Or so we were taught in school. Today Calcutta is a city of paradoxes where palaces co-exist with potholes! With a staggering population of 10.2m, West Bengal's capital remains one of the country's most populous urban concentrations epitomising all that is splendid and all that is squalid about urban India. Here, the architectural splendour of the Victoria Memorial and the majesty of the Raj Bhawan are set against the world's most noxious slums and wretched pavement hovels. Here, antiquated trams, relics of British India, run alongside the Metro trains—Calcutta's latest technological marvel! It is here that the commercial centres of Chowringhee uphold the rule of *laissez faire* under the very nose of a Marxist Government! The city's contours revealing a curious blend of the high and the low, the posh and the putrid, symbolise the vicissitudes of Calcutta.

Calcutta's history

One must go back a long way through the corridors of time to recount the history of Calcutta which has recently celebrated its 295th birth anniversary. It was on the fateful day of Aug 24, 1690 when Job Charnock, 'The East India Company's agent', set foot on the banks of the Hooghly and hoisted the British flag there. Later, in 1698 Charnock purchased the three villages of Sutanutty, Gobindapur and Kalikata from Osman, the grandson of Emperor Alamgir. "at a grand sum of Rs 16,000". Thus, it is from this cluster of villages that Calcutta, the erstwhile commercial and political capital of British India, was born. Interestingly, St Petersburg was founded by Peter the Great at the same time. And both the cities were destined to be the capitals of two mighty empires over which, as it was once believed, the proverbial sun would never set.

Even 150 years back Calcutta was a place of "mists, alligators and wild beasts", and a "receptacle of squalor and dirt" which perhaps prompted the poet Ishwer Chandra Gupta to

write in 1822:

"Pestered by the fly whole day and plagued by the mosquito at night,
Such is the Calcuttians' plight."

Today, the situation hasn't changed much. Calcutta is now a city steeped in gloom—a soot and concrete jungle of pollution, power-cuts and poverty. The story of disintegration is sadly written on the walls of many of its monuments which are now in ruins. Calcutta High Court, one of the oldest court buildings in Asia, and some of the historic structures in Dalhousie Square (now named Benoy Badal Dinesh Bag) are yielding place to mushroom growths of modern office buildings. The old Imperial General Post Office, with its exotic silver dome and its neo-classical columns, shows tell-tale marks of disfigurement.

India's 'cultural capital'

Even as darkness broods over every corner, Calcutta continues to throb with a rich tradition and creative vitality that have made it India's 'cultural capital'. One can discover the imprints of Calcutta's culture in the half-finished images of Goddess Durga at Kumartuli, in the bewitching melody of its *rabindrasangit*, or in the rounded symmetry of its sweet and succulent *rosogollas*. A curious eye will discern a

Image of a dying city.

remarkable synthesis of various cultures in the varied designs of Calcutta's buildings. The turn-of-the-century Hindu mansions of Shambazar, the ornate buildings of Merwaris at Burabazar, the distinctive Anglo Indian houses of Park Street, the Muslim houses of Rejabazar and those of the Chinese at China Town form a fascinating mosaic.

Calcutta's pavements

Calcutta's footpaths teeming with beggars, hawkers, fortune-tellers, refugees and unemployed youths cut across a wide diversity of the city's populace. Calcutta's hospitality which is inherent in its very culture, provides nightbeds for a massive 10 lakh pavement dwellers. A recent ISI survey reveals that 50% of Calcutta's footpath dwellers earn enough for two meals every day. It has also been found that 64% of these people were permanent migrants, 19.9% came from Bihar, 6.5% were refugees from Bangladesh, and the rest migrated from various other states of India. It is also estimated that 86.7% of these people flocked to the city because of sheer poverty. The figures will partly explain the severe economic and civic crises of Calcutta today.

A sporty city

Of the many things that Calcuttians are proud of, football is certainly one. Calcutta's Maiden is the nursery of budding footballers. Football is not only Calcutta's major source of entertainment, it is an infatuation that grips the entire city. The serpentine queues at ticket counters, the stampede in the stadia before matches commence, mass adulation of 'football stars', and the frenzy that accompanies a victory celebration of a 'big club', should be seen to be believed. It is not surprising therefore that Mohun Bagan, East Bengal and Mohammedan Sporting—the three giant clubs of Calcutta football have completely dominated the Indian soccer scene for several decades.

A few paces away from the maiden is the legendary Eden Gardens, a name that conjures up memories of many a cricketer's battle fought here over the years. It was in 1841 that Lord Auckland created this ground and christened it 'Auckland Circus Garden'. Later, in 1854 he renamed it 'Eden Gardens' to keep alive the memory of his two sisters whose family name was Eden. The concrete coliseum accommodates more than 80,000 which makes it the world's largest cricket stadium after the Melbourne Cricket Ground.

A festive city

'Thirteen festivals in 12 months,' is a well-known Bengali saying. And Calcutta's numerous festivals bear testimony to this. On

Refugees from Bangladesh on a Calcutta footpath.

the very first day of *Beishekh* the Calcuttans usher in their *naba barsha* (the Bengali New Year's Day) with mangoes, jackfruits, new account books, *panjikas* or almanacs and their traditional pomp and gaiety. Even before the New Year spirit has died down comes 25th *Beishekh*—the day Tagore was born. Calcuttans pay their homage to 'Gurudev' on this memorable day with songs, recitals and dance-dramas from his works. Infact, Rabindranath Tagore has been so much a part of Calcutta's life that the city has named after him a university (Rabindra Bharati University), a cultural centre (Rabindra Sadan), a street (Rabindra Sarani), a lake (Rabindra Sarobar), and the famous Howrah Bridge (now called Rabindra Setu). In the month of *Jeistha*, on the occasion of *Jameishesthi*, Bengali bridegrooms clad in their spotless *dhoti* and *panjabi* make for their mothers-in-laws' houses where they are sumptuously treated. Come October, and Calcutta dresses up for the much awaited *pujas*. Glittering streetlights, overcrowded *pandals*, new clothes, fire-crackers, microphones blaring out *puja* numbers—all these have become integral

features of the city's *puja* celebrations. Durga Puja, Lakshmi Puja, Kali Puja, Dipabali Bhratrid-witiya (Brothers' Day), Saraswati Puja—the annual celebrations go on, unceasing in spirit, and each adding its characteristic flavour to Calcutta's *joie de vivre*.

The city's attractions

As the first capital of modern India, before Delhi was made the Imperial Capital in 1911, Calcutta is the focal point of a huge network of transport and communication including a great seaport and a modern airport which makes it a convenient tourist resort. Calcutta's monuments with their rich historical associations are obvious attractions for most tourists. Fort William, Victoria Memorial Hall, and the Indian Museum will take one through the dim vistas of Calcutta's history. The National Library with its palatial building in the Italian renaissance style of architecture, the Writer's Building with its imposing edifice of Gothic architecture and the 109-year-old New Market, with its bricked towers and angular roofs will draw the viewer's attention. The Asiatic Society, one of the ancient literary and scientific societies of the East, is situated at the junction of Park Street and Chowringhee. Established on Jan 15, 1784, the society had luminaries like Sir William Jones as its president and Warren Hastings as its patron. The Academy of Fine Arts,

Bangiya Sahitya Parishad, Birla Academy of Art and Culture are some of the well known cultural establishments. The home of Ramkrishna Paramahansa and his illustrious disciple Swami Vivekananda, can make Calcutta boast of a rich spiritual heritage. Dakshineswar Kali Temple and Belur Math draw pilgrims from all over the world. Besides, Botanical Gardens at Sibpur, Zoological Gardens of Alipur, St. Paul's Cathedral, Birla Planetarium, Paresnath Temple, Nakhoda Mosque, Mahajati Sadan and Marble Palace are some of the major tourist spots, spread over the city.

Resting beside the Sahid Minar bathed in the crimson light of the setting sun, the weary traveller will discover a dark anonymity slowly engulfing Calcutta's skyline. The imposing minar will remind him of the 'golden days' when Calcutta was the nerve-centre of Bengal's Swadeshi Movement and the 'prized possession' of the British imperialists. Today, the old glitter has gone, but the glow still remains. While ecologists proclaim the city 'dead', Calcutta lives on with her songs and dances, her theatres and her poetry that remind us of Tagore's lines in *Palatake*:

"Always I hear, 'gone away, gone away'
Never say, 'she is gone'.
It is a lie, I cannot bear it."

Debashis Chatterjee, Calcutta

CALCUTTA'S VITAL STATISTICS

● Calcutta's demographic profile

Population of metropolitan Calcutta: 10.2m
Density of population: 31,651 people per sq km (1981 census)
Growth rate within Corporation Territory: 4.5% (1971-81)
Number of people living in slums or *bustees*: 30 lakhs
Every third person of Calcutta is a slum dweller as against every fourth in Delhi and every fifth in Bombay.

● Calcutta's transport

Number of passenger vehicles: Taxis-11, 98B; Auto-rickshaws-42B; Trams-430; Private Buses-3641; State buses-1449 (December 1984 figures)

Average speed of traffic: 8 km/hour
Volume of cargo handled at Calcutta port: 11.6m tonnes. (1984-85)
Volume of cargo handled at Calcutta airport: 27,348 tonnes (1984).

● Calcutta's streets

Of the city's 37 square mile area the streets occupy a length of about 520 miles encompassing only 6.3% of the surface lands. This is way below the international standard of 25%-30%, which is the optimum road surface.

Teiipiece: On an average 18,000 telephones of Calcutta always remain out of order

D.C., Calcutta;

THE STORY OF MONOPOLY

Millions of dollars have been won and lost over it in a few short hours. It has landed people in jail and forced them into bankruptcy, with no choice but to turn all of their assets over to a merciless landlord. People have met, fallen in love and married over it—and who knows how many arguments it has caused?

It, of course, is *Monopoly*, Parker Brothers' Real Estate Trading Game, probably the most famous proprietary board game in the world. Who could fail to recognise the origin of that familiar imperative—"Pass Go, Collect \$200"? And where else but in a *Monopoly* game would going to jail be a welcome respite from an exorbitant rent bill?

Since it first went on the market in 1935, over 80m *Monopoly* sets have been sold worldwide, and it is now played by an estimated 250m people. Parker Brothers is undoubtedly the largest 'housing developer' in the world—they've 'constructed' over 2,560,000,000 little green houses in 44 years.

Monopoly is a game that lends itself to zany events and is even a tournament sport. And, just as with any other fiercely competitive sport, it has its physical hazards comparable to tennis

elbow or runner's toe. '*Monopoly* knees' is the acute syndrome that sets in after sitting cross-legged for a four-hour match.

A Marathon Event

But many players are not content with buying and selling, wheeling and dealing in the comfort of their own living rooms. For some reason, the game's fanatics feel compelled to play their game in treehouses, in bathtubs, elevators, underground, underwater, even on balance beams. Records have been documented not only by Parker Brothers, but also by the *Guinness Book Of World Records* for extraordinary *Monopoly* events. There's the longest game played in a moving elevator (16 days), in a bathtub (59 hours), the longest anti-gravitational game (played on a ceiling for 36 hours). The current world record for the longest game ever is held by the McCluer North Games Club in Foorissant, Missouri, USA—played for 1,416 hours, or 59 days straight.

The largest *Monopoly* game took place in April 1967, at Juniata College in Huntington, Pennsylvania, USA. The playing board was laid out on an area larger than a city block, using campus streets and sidewalks. The dice were large foam rubber cubes cast from a third floor fire escape and players were informed on their moves by messengers on bicycles equipped with walkie-talkies.

One of the most exotic *Monopoly* playing marathons was held in 1976 when the Lodi California Diving School played for 1,008 hours—underwater. 140 people in wet suits played in two-hour relays during 42 days of unbroken play. However, this wasn't the first underwater *Monopoly* game ever played. In 1967, Parker Brothers' engineers designed a special waterproof set—the board weighs 95

fibres backed with steel and laminated with cellophane. The Title Deed, Chance and Community Chest cards are also sandwiched to metal and laminated with cellophane, and the houses and hotels are filled with steel wool. The set is so popular, it barely has time to dry off between games.

Parker Brothers seems to be endlessly patient with prospective record-breakers whose sanity the layman would regard with suspicion. In 1961 students at the University of Pittsburgh, USA, in the midst of a 161-hour marathon, discovered that the Bank lacked sufficient funds to continue. Faced with impending Depression, or worse, the end of the game, the players wired an urgent request to Parker Brothers for one million dollars. The company, which prints more money than the US mint each year, responded with style. They sent a million dollars of *Monopoly* money to Pittsburgh by plane and wired Brink's Armored Car Service to meet the plane at the airport. The money was taken to the depleted Bank under armed guard.

Monopoly And Atlantic City

All of the above happenings place *Monopoly* in a class by itself, but it took an event which made national headlines to prove the point once and for all. In September 1972, a simple proposal by the Atlantic City Commissioner of Public Works threatened to rock

the foundations of the *Monopoly* playing world. A campaign to give the city a new image included a suggestion to change the name of Baltic and Mediterranean Avenues.

The storm of protest resulting from such 'heresy' was overwhelming. Hundreds of letters, telegrams and phone calls flooded Parker Brothers offices. Students rallied around the cause, forming committees such as Princeton University's 'Students to Save Baltic and Mediterranean Avenues' (SSBMA) which threatened to flood Atlantic City with *Monopoly* money if the proposal was voted in.

The climax of the controversy occurred on Jan 11, 1973, at a public hearing which the commissioners expected to be a routine matter. They were met by nearly 300 citizens, newsmen and spectators who had gathered to fight 'to the death' if necessary.

The five-man commission unanimously agreed to veto the proposal.

The Origins

Monopoly was first brought to Parker Brothers in 1934 by Charles B. Darrow of Germantown, Pennsylvania. At the end of the initial play test by Parker Brothers executives, however, the game was unanimously turned down. It took too long to play, the rules were too complicated, and players kept going round and round the board instead of ending up at a final goal. Advised that the game contained 52 fundamental playing errors, Darrow proceeded on his own. When reports of the game's success began to reach Parker Brothers, the company bought the rights in 1935.

Monopoly was the biggest thing that had ever hit Parker Brothers. Sales of the game skyrocketed and by mid-February, the plant

was producing 20,000 sets a week. Before Christmas, so many telegraphed orders had poured in that they were filed in huge laundry baskets and stacked in the hallways. Faced with an ever-increasing backlog of requests, a book-keeping firm in Boston was called in to help with the mountain of clerical work. The firm's representatives took one look and refused the job at any price.

Despite the initial enthusiastic reaction to the game, the company viewed *Monopoly* as a fad game for adults that would sell well only for about three years. Certainly it was too complicated for children to play. And just as expected sales soon began to level off. But then, suddenly, sales went up again, and the upward spiral has continued ever since. Parents taught the game to their children, and so on, making it the world's most popular board game.

Monopoly Goes Foreign

The popularity of the game soon transcended the boundaries of the US, and it is now published in 28 countries. It's printed in 19 languages, including French, Italian, Spanish, German, Dutch, Flemish, Swedish, Finnish, Indian, Norwegian, Greek, Portuguese, Japanese, Chinese, Arabic, Catalan and Danish. Generally the game is translated into foreign real estate and currency. In England the location is London. Boardwalk and Park Place become Mayfair and Park Lane.

The Soviet Union has banned the game as being 'too capitalistic', but there is reason to believe that at least a few Russians have been secretly taking a ride on the Reading. During the American National Exhibition in Moscow in 1959 all six *Monopoly* sets on display disappeared. *Courtesy Parker Brothers*

A BRILLIANT COPY!

The decision of the Information & Broadcasting Minister to promote art films on TV is commendable. *Ek Rooka Hue Feisle* was the second film which was specially produced for TV by well-known director, Basu Chatterji. The film has been liked by all for it has a powerful theme. Twelve jury members decide the fate of a boy who is alleged to have murdered his father. From one not guilty and 11 guilty, the unanimous decision at the end is not guilty. The 12 representatives of society look at the situation from the standpoint of their psychological make-up, shaped by their past experiences in life and society. The picture, in fact, is thought-provoking.

The film does not fit into our set-up because we do not have a jury system. Chatterji could have adapted the story and changed it keeping in view the Indian conditions. It could have been a discussion between a bench of five high court judges who have been influenced by five different value systems or a discussion between a group of enlightened citizens.

Honesty of profession demands that Basu Chatterji should not take credit for at least the theme of this film. The film is a carbon copy of *Twelve Angry Men* directed by Sydney Lumet in which Henry Fonda was the main actor. The situation, the dialogues, the style are the same. Perhaps, only 10% of the dialogues have been changed by the script writer and the director. The style of acting, mannerisms and facial expressions are also similar. Even the rain and electricity light come and go exactly at the same time.

Chatterji could have at least explained the fact that the film was not his original and was based on *Twelve Angry Men* during his interview with Vinod Tewari just before the screening of the film.

Stars And Careers

SAGITTARIUS

If you were born between Nov. 22 and Dec 21 the Sun on your birthday occupied Sagittarius, the ninth sign of the Zodiac. As such Sagittarians are good-natured, generous, judicial, sincere and impartial. They are open and easy-going and possess a friendly nature. They can intuitively guess the truth behind any attempt to deceive them.

Sagittarians are restless, hopeful and enthusiastic. They are usually fond of out-of-door games and exercises. Although they have fantastic retention power, they can forget little things like where they have left their belongings. They are frank and cordial. Sagittarians also possess the natural ability to channelise their energies in the direction of higher or more difficult branches of learning, such as philosophy, theology or law.

They are creative, imaginative and have the potential of becoming inventors or discoverers. Mercury rules the tenth house of the Sagittarian nativity. This implies that all Mercurial professions such as literary work, teaching, audit-

ing, engineering, advertising, publishing, printing, secretarial pursuits, book-selling, stationery business and work in foreign offices would be suitable for them. Jobs entailing frequent travelling and quick changes also appeal to the Sagittarian nature.

Sagittarians are also lovers of nature and have well-developed aesthetic sensibilities. Essentially impulsive by nature they may be prone to bouts of brusqueness once in a while. As a rule, though, they are extremely cordial and dislike any breach of etiquette. Their business acumen ensures financial security for the Sagittarians.

During 1986 Mars will remain in the Sagittarian house of wealth from March to October. This will give Sagittarians success in financial endeavours. However, it is also likely to make them reckless in their expenditure. This tendency should be curbed in order to make best use of the Mars influence. The period between Mar 28 and Oct 8 next year will be good for Sagittarians healthwise too.

Saturn will commence its transit from Sagittarius from Nov 17 for exactly three years. Jupiter too will enter its own sign, Pisces on Feb 20 next. The next two years will therefore be particularly important for Sagittarians. 1986 may provide challenges which if accepted will put Sagittarians right on top in 1987. This period, though not exactly easy-going, is full of promises of success, plenty and prosperity later on. Some notable persons born under this sign are Winston Churchill, John Milton and Pope John XXIII.

How good are you at maths? And at mathematics? For that is what this time's **Word Play** is all about. Hidden in the grid are the names of 22 Maths wizards. They have been set horizontally, vertically or diagonally.

forwards or backwards. No letter has been used more than once. To help you solve this complex mathematical problem, here are some clues:

1. He can't set theories.
2. He's a man of letters.
3. He was the prince of Mathematics.
4. Cain's brother?
5. He had mean values in life.
6. He's the moving one.
7. The inventor of logarithms.
8. He calculated pies without circles.
9. He went places in celestial mechanics.
10. He developed the geometry of numbers.
11. The new man who played games.
12. She competes with computers.
13. A great German algebrist.
14. He had a tough time discovering 15 talents.
15. A famous Indian mathematician.
16. He stood out like eucalyptus among lines, points and planes.
17. He did group work to solve algebraic equations.
18. A branch of Algebra is named after him.
19. He found the right angle to view triangular relations.
20. He was destined to bring coordinate geometry into existence.
21. He had the last theorem.
22. He put the planets in motion.

OBSERVE & DESERVE

HAIR-RAISER

His own face seems to have this young man baffled. If you can scratch your head a bit and peer through this GAJWANI handiwork, you will understand his bewilderment.

Bagley's *Night Of Error* from **Rupa & Co.**

APPERCEPTION TEST-7: 10 First Prizes

An exciting package from **Rupa & Co., New Delhi** to the correct entries pulled out of the hat.

RIGHT TO CHOOSE

Over the last few months, Doordarshan has been televising a variety of sponsored programmes and TV serials. Of late, however, several programmes chosen at random have been discontinued with scant respect for public demand. Popular programmes like *Idher Udher*, *Mashoor Meher*, *Ados Pedos*, *Berrister Vinod*, *Show Theme*, *Mr Ye Mrs*, *Peying Guest* and *Netkhet Nered* bear ample testimony to this fact.

And very soon the axe is going to fall on the most popular family serial *Hum Log*, the first soap opera in India, which has had its marathon run for more than a year. The first wholly-indigenised serial, *Hum Log* invited viewers' responses to the extent that its story too became subject to the whims and fancies of the watching public. The type of two-way communication it started between the government and the masses is unprecedented in the history of Indian TV.

Do you want this serial to continue or would you rather see it wound up? We believe the viewers have a right to select the programmes they want to see. Write in your frank opinions to V.N. Gadgil, Minister of Information & Broadcasting, and address them to Career & Competition Times, 10 Daryaganj New Delhi-110 002. Last date for receiving entries is Dec. 10, 1985. Your entries will be forwarded to the minister.

SOLUTIONS

APPERCEPTION TEST-5

The telephone sure rang the right bell in a large number of our readers' minds going by the flood of correct entries that swamped us. But there were many wrong numbers for every one that connected. The trick lay right there in the middle—the stopper on the dial should have been close to '0' rather than '1'.

The ten lucky deservors: 1. Alok Chaturvedi, Hardwar. 2. Kamal Rathi, Nepal. 3. Shikha Sharma, Delhi. 4. K. Gomathi Nayagam, Nanguneri (Tamil Nadu). 5. Baljeet Singh, New Delhi. 6. Alka Mishra, Mirzapur (UP). 7. Sujit Dutta, New Delhi. 8. Deepak Kumar, Mittal, Meerut. 9. Manish Sinha, Hazaribag. 10. Jyotsnalatha Subramaniam, Kodambakkam, Madras.

In **Word Play-2** (CCTimes, Oct '85) a part of the clue—Indian state capitals—was inadvertently omitted. However, even those entries which mentioned just the names of the states were considered for the prizes.

HOW TO ENTER

- Print the answers neatly in capital letters alongwith your name, age and address. Each **Word Play** and **Apperception** entry must be written only on postcards.
- You may send in any number of entries, but each must be numbered accordingly and accompanied by its respective COUPON.
- Though all your entries will be included in the draw of lots, you will be entitled to only one prize—the highest in case you're getting more than one.

Closing date for the contests: December 25.

Address your entries to: The Editor, Career & Competition Times, 10 Daryaganj, New Delhi-110 002.

Solutions in February.

TRIPLE DEAL

T rue to their blockbusting tradition, Robin Cook, Jack Higgins and Desmond Bagley have each chummed out yet another exciting thriller—*Mindbend*, *Confessional* and *Juggernaut*. And once again the authors establish their reputations as masters of excellence of suspense fiction. Whirlwind paced, action-packed and immensely entertaining, these best-sellers are compulsive page-turners. Yet this is where the similarity ends. For the plots are entirely different as are the inimitable styles of the writers.

Robin Cook's *Mindbend* is a classic of medical horror. And like his other novels, *Coma* and *Brain*, it explores yet another frightening plausibility in the world of medicine. It is precisely this element which lends Cook's novels a credibility seldom associated with works of fiction. In fact, through his books, Cook voices his concern over the unethical practices gradually finding their way into the medical profession. *Mindbend* deals with the powerful and unscrupulous influence the drug industry can wield over it. Cook says of this book—"It is my hope that *Mindbend* will help focus public attention. By couching the problem in an emotional framework it brings the process into personal perspective and allows the reader to understand the implications of the situation through identification with the main character.

The story weaves around Adam Schonberg, who, owing to his wife's accidental pregnancy, drops out of medical school and becomes a salesman for a vastly powerful drug concern, Arolen Pharmaceuticals. He detects various dis-

Mindbend by Robin Cook, price Rs 20, pages 368; *Confessional* by Jack Higgins, price Rs 20, pages 256; *Juggernaut* by Desmond Bagley, price Rs 20, pages 320. Published by Rupa & Co., New Delhi.

A PASSAGE TO INDIA

T he subcontinent emerges from the level of a mere backdrop and grows into a heroically scaled hypnotic central character in David Lean's masterly adaptation of E. M. Forster's classic novel. This brilliant rendering of a literary masterpiece marks the triumphant return of British director David Lean to the screen from a 14-year exile. And in *A Passage To India*, Lean's talents and his consummate mastery of the craft reach their acme.

Bombay, 1920. The brisk morning air is still with the tremulous tones of massed brass bands and the steady tap-tap-tap rhythm of marching cavalry. The moment is intense—the Viceroy and his Lady are returning from England. And as they thread through the streets to the heady music of an empire's transitory pomp they pass and blend into the subcontinent's timeless perspectives.

Night: A train puffs and boots two modest travellers, Adela Quested (Judy Davis) and Mrs Moore (Peggy Ashcroft) to their destination—Chandrapore. Adela appears dull and vapid at

crepancies in its working and investigations lead him on a harrowing trail. Through it he discovers the grisly lengths to which the company can go to persuade doctors to promote its standard drugs.

Confessional by Jack Higgins is a high voltage terrorist drama. Through the gripping, gruesome and yet, surprisingly moving story of an internationally wanted assassin Cuchulain, all set for the biggest kill of his life—Pope John Paul himself—Higgins reveals the shocking history of terrorism and the extent to which powerful nations can go to disrupt world peace. And how harshly they can treat criminals who are a product of their mistakes. Cuchulain is perhaps Higgins's most unusual assassin—intelligent, unscrupulous and cold-bloodedly ruthless and yet compassionate sensitive, gentle and almost lovable. *Confessional* establishes Higgins as a brilliant story teller.

Juggernaut is the second previously unpublished novel of Desmond Bagley, the English writer who created quite a name for himself as an adventure novelist. Set in Nyala, an oil rich West African state the story revolves around a gigantic rig that is longer than a football pitch, weighs a mammoth 550 tons and moves at an average of five miles per hour. This massive Anglo-American convoy is transporting a giant transformer for a multi-national company interested in dabbling its hand in Nyala's torture of liquid gold—oil. And in the process faces all kinds of tricky situations from bad roads to civil war. Caught in the vortex of a bloody conflict, the huge ungainly juggernaut and its crew brave all odds. From a mobile hospital for the war victims the juggernaut soon becomes a haven for the destitute and a nuisance for the authorities. And finally turns into "a raging brute symbolising destruction." In his lucid manner, Bagley relates an absorbing tale.

On the whole then, these three best sellers could well prove to be virtually unputdownable for those with a taste for adventure and thrill.

J.S., New Delhi

first glance but hidden in her is a tight coil of vivacity and spirit, straining for release in the chugging, rattling train she vaguely dreams of the adventure of discovering what she likes to call the "real India". Outside, the real India broods enigmatically.

Morning, some weeks later: Miss Quested has found her adventure. A young Muslim physician, Dr Aziz (Victor Banerjee), has mounted an excursion to the Marabar Caves in the hills beyond Chandrapore; and to make the English women's first encounter with real India memorable and comfortable, he has organised a huge retinue of servants and an elephant. But even the great beast and the convoy of servants are dwarfed by the featureless rocks that loom over them along the way.

These are awesome images, astonishing images. But their value is not merely pictorial; as they unfold and interlace, they reveal new shades and levels of meaning. Indeed, the central meaning of Lean's *Passege*, like in his earlier films, *The Bridge On The River Kwai*, *Lewrence Of Arabia* and *Doctor Zhivago*, is carried by images, and by his manner of juxtaposing them in editing. Like Forster, Lean uses India not just as an exotic setting but as a decisive force in shaping the story, as a reso-

nant symbol: of the 'unknowable', chaotic universe everyone inhabits; of the unknowable and chaotic inner life that inhabits everyone.

The problem the movie presents to the adapter lies in a trick of design. To sift the meaning of the story from its main narrative line. The narrative is richly peopled with the types Forster encountered during his visits to India. Psychologically, the point on which it is poised is the bottled up emotional tippiness of Adela. She will have her adventure! She will touch the Indian reality. And she will do so despite the warnings of Ronny, her priggish fiancé. Adela finds in Fielding (James Fox), principal of a local school, a perfect ally for pursuing her elusive quarry—real India. Fox plays the part of a liberal, generous Englishman with skill and an unusual panache.

The caves. What actually happens when Adela and Aziz part with the rest to explore the remotest of them? A question which neither Forster nor Lean attempts to answer. All we know—and probably need to know—is that Adela and Aziz after a brief conversation enter different caves. There is a loud echo which frightens and disorients her, and suddenly she is hysterically stumbling down the hill—giving a distinct impression of having been assaulted. Was the whole thing a hallucination or did Aziz follow her and make sexual advances to her—we shall never know though both Forster's and Lean's treatment seems to absolve Aziz. But even after the trial scene culminating in the dramatic moment when Adela recants her accusation, one can never be certain.

Only two characters understand the dreadful disorienting power made manifest by the echo and their answer to it is withdrawal from the world. One is the Hindu scholar Godbole played by the inimitable Alec Guinness. The other is Mrs Moore, Adela's travelling companion, almost comically regal at some moments, ungainly vulnerable at others as Peggy Ashcroft plays her. Mrs Moore enters only one cave, then recoils from it having confronted her own mortality. Later on when people try to draw her back into the muddle to testify at Aziz's trial she escapes by booking passage home. "Nothing I say or do will make the slightest difference." Both Godbole and Mrs Moore realise the futility of contemplating the murdure and reasonable when everything is so topsy-turvy.

Echoes, echoes. The critic Lionel Tilling described the novel as "a book which is composed of echoes." And to capture the spiritual essence of the novel the film had to be a thing of echoes—but visual not auditory echoes. The early shots of the great arch and the little train lost in the huge landscape proclaim the film's overarching theme—India as a mysterious and maddening cavern—and then Lean sets the echoes reverberating through them. The moon, first cool and tiny when Mrs Moore meets Aziz, then vanishing completely, reappearing to shed moon light on the fateful voice of the cave, and then suddenly looming large over the shoulder of a forbidding monolith. Then there are the echoes of monkeys and the bouquets. All echoes finally converge on the central theme of the novel which Forster insisted "was not about the incompatibility of east and west but about the difficulty of living in the universe."

"I am most impressed (by) the clear explanations and (the) many normally unknown facts about visas (given in your book)," wrote Dr KV Rao, MBBS, of Kurnool, AP, in one of the hundreds of letters received from appreciative readers of this practical handbook.

In 1982, 93,344 non-immigrant visas and more than 20,000 immigrant visas for USA were issued from India. You can get one too if you know how. How to go to America apprises you with the process and helps you evaluate your eligibility.

If you want to study in the U.S., How to go to America tells you about higher education in America, life at American universities, the admission procedures and also provides details and tips on sources of financial aid, including scholarships available, on how to work

out your budget, on living arrangements, part-time work, etc.

If you want to work in the U.S., this book describes the steps for getting labour certification, the kinds of jobs that are certifiable and shows you how to prepare for, apply for, and get a Green Card (immigrant visa), and the completely legal ways of entering the job market without a Green Card.

Complete with a sample set of actual application forms required for different visas, How to go to America has been written by a team of Indian professionals actually working and living in the U.S.

So if you are really serious about going to America to study or to work, get a copy of How to go to America — and get going.

IN TODAY'S COMPETITIVE WORLD FEW SUCCEED *You can be one of them!*

Lakhs and lakhs of students sit for competitive examinations every year. But how many of them are successful? Success means perseverance. It means the ability to work hard. It means organised study with the right kind of books.

We at Tata McGraw Hill have specially designed and developed a set of books to ensure your success.

BOOKS FOR COMPETITIVE EXAMINATIONS

TMH Model Solutions to IIT Entrance
Exam Papers—1981-85
With Question Bank Rs. 45.00

TATA McGRAW-HILL NTSE SERIES

Study Packages for Class IX-X
and National Talent Search Examination
in PHYSICS Rs. 10.50
CHEMISTRY Rs. 10.50
BIOLOGY Rs. 9.00
HISTORY Rs. 7.50
CIVICS Rs. 6.00
GEOGRAPHY Rs. 10.50

TMH Study Package in MENTAL ABILITY
for National Talent Search Examination Rs. 13.50

TMH Study Package for Medical College
Entrance Examinations In press

TATA McGRAW-HILL SELF STUDY SERIES

This unique series offers a direct approach and lucid style to supplement the students' day-to-day studies and prepares them for the end-of-year and competitive examinations.

All these books are based on the revised CBSE syllabus of 1985.

THEORY AND PROBLEMS OF
PHYSICS FOR CLASS IX
WITH SOLVED PROBLEMS Rs. 16.00

THEORY AND PROBLEMS OF
CHEMISTRY FOR CLASS IX
WITH SOLVED PROBLEMS Rs. 18.00
